BAPTISTRY FIRE WRECKS CHURCH

AUTO BLOCKS WAY TO HYDRANT

Fire Chief on Trail of Violator of Ordinance—New Building to Be Considered at Wednesday Night Meeting.

Fire from a stove in the rear of the building, used to heat water for the baptistry, made its way through a defective flue in the Baptist church shortly after 9:30 o'clock Sunday quickly ignited the wooden wall, and resulted in destruction which will probably necessitate the replacement of the better part of the building. The Sunday school room in the rear was slightly damaged by water, and the room in the extreme east of the building, formerly used to house the city library, was not touched. To replace the building, it is estimated, would cost \$5,000, while only \$1,500 insurance was carried.

The fire was seen by Rev. E. B. Johnson, the pastor, just before leaving the church, but the alarm was given from outside before he could reach a telephone. The fire department responded immediately, but experienced a delay of nearly two minutes in removing a touring car which, contrary to city ordinance, had been parked directly in front of the hydrant at the southwest corner of Bond and Oregon. Aside from this, an exhibition of fast, efficient work was given, and the flames were quickly controlled. The greater part of the damage done, however, could have been prevented if the way to the hydrant had been open, it is stated.

Another source of annoyance was the attempt of several motorists to drive over the fire hose after it had been laid to the fire. Both this, and parking near hydrants are contrary to city ordinance, and Chief Carlon has secured the number of the car which caused the chief delay and will ask that the maximum penalty be visited upon the owner.

be discontinued or the quantity reduced.

TRAP-NEST ALL LAYING HENS

Tende to Tame Birds, thereby increasing Egg Production and Permitting Clear Record.

When possible it is advisable to trap-nest the layers for the following reasons: (1) To tame the birds, thereby tending toward increased egg production. (2) To furnish definite knowledge concerning traits and habits of individuals. (3) To furnish the only satisfactory basis for utility or other breeding. (4) To eliminate the non-productive hen. (5) To add mechanical precision to judgment and experience in developing and maintaining the utility of a flock.

WHITE BIRDS GAINING FAVOR

Rocks, Orpingtons and Rhode Islands Coming to Front Fast as Egg Producers.

The White Rocks, White Wyandottes, White "Reds" or Rhode Island Whites—are fast coming to the front as high egg producers. The achievements of the White Leghorns seem to overshadow all other white birds.

REDUCE LOSS BY CHOLERA

Farmers Must Organize in Determined Effort Consisting of Self-Imposed Quarantine.

(Prepared by the United States Department of Agriculture.)
Permanent reduction in losses from cholera, says the United States department of agriculture, can be expected only when farmers organize in a determined effort consisting principally of self-imposed quarantine, the continuous employment of sanitary measures and the early use of the serum treatment should the herd become infected or dangerously exposed.

PREVENT CROWDING OF PIGS

Properly Constructed Feed Trough Will Permit Each Little Perker to Get His Share.

Young pigs should be given their feed in such a manner that each individual pig gets its share. The simplest way to accomplish this is to allow the pigs to eat from a properly constructed feed trough, one that will keep the pigs out of the feed and will lessen the possibility of crowding.

A burglar could demand no more comfortable living conditions than the red mites and lice receive in some poultry houses. They are thieves of poultry vitality and must be controlled.

POULTRY FACTS

BEST FOOD TO FATTEN FOWL

Whether Young or Old Mixed Grains Are Better Than Any One Variety—Milk Is Relished.

Mixed grains are better for fattening fowl, whether old or young than any one variety alone. Oats and corn, ground, are perhaps the most fattening. Buckwheat and ordinary wheat are good food and add variety to the rations but they are not so fattening. Chickens get tired of one kind of feed, the same as people do, but they thrive on mixed feed. Skim milk is one of the best articles of diet that can be put on the fowl's bill of fare. It is relished, it is healthful, it is nourishing and it greatly improves the color, flavor and texture of the dressed meat. Among the most rapid gainers for killing purposes are the barred Plymouth Rocks, the Rhode Island Reds and the Wyandottes. Fed on the above rations any of them can be made to gain from a pound to a pound and a half in three weeks, possibly less. This is profitable feeding.

ability of serious injury is reduced to a minimum. On the other hand, they state that it is advisable not to feed the damaged grain—and never to use this material if it is moldy or musty—in anything but very small amounts where the fowl are closely confined all the time. There is an inexplicable something about the range which the birds have as well as the waste products which they utilize that apparently keeps them healthy, so that

Chickens Having Free Range Utilize Much Waste Product.

they are able to handle small amounts of grain which are not too seriously damaged. It is especially necessary to watch corn and cornmeal, as these feeds are inclined to spoil rather easily.

GREEN BONE GOOD FOR HENS

Material Can Often Be Purchased From Local Butcher—Is Substitute for Meat Scrap.

(Prepared by the United States Department of Agriculture.)
Green cut bone can often be purchased from the butcher. This material when procured fresh makes an excellent substitute for beef scrap. It should be purchased in small quantities, as it cannot be kept fresh for any length of time and when spoiled may cause severe bowel troubles. It is best fed in a trough not often than every other day, allowing about one-half ounce per bird. Should severe or continued looseness of the bowels follow the feeding of green cut bone it should

FEED FOWLS DAMAGED GRAIN

It is Essential to Exercise Particular Care That Birds Are Not Injured by Material.

(Prepared by the United States Department of Agriculture.)
Although it is good management to allow poultry to rustle about in grain fields and stock yards after the grain crop has been stacked or thrashed, it is essential to exercise particular care that the fowl are not injured by feeding on damaged grain. Specialists of the United States department of agriculture assert that where damaged grain is fed in limited amounts to the flock which is on free range, the possi-

MITES REMAIN IN FEATHERS

Night Pest of Chickens May Stick to Fowls in Sufficient Numbers to Scatter Themselves.

Chicken mites, the night pest of poultry, may not always leave the fowls before daylight, as commonly supposed, but may remain in the feathers in such numbers as to make poultry possible carriers of this pest to unfested places. This fact was brought out recently by an entomologist of the United States department of agriculture in the course of a study of the life history and habits of the chicken mite, undertaken to discover principles on which combative measures might be based.

COMFORT IN COLD WEATHER

Men House Should Have Plenty of Fresh Air and Sunlight—Make It Warm as Possible.

Be sure that the poultry house is comfortable during the cold weather—that it has plenty of air and sunlight on bright days, that it is made warm as possible, while furnishing enough fresh air, during the cold nights when the hens are on the roost.

Poultry houses should be covered with a good grade of roofing paper, as it makes a tight roof and does not permit the warm air to seep out through the roof, as is the case with shingles.

CLASSIFIED ADVERTISEMENTS

Classified advertising charges per issue 20 cents for 20 words or less. One cent per word for all over 20. All classified advertising strictly cash in advance.
FOR RENT—33 acres within a mile of Bend, unutilized for several years; water for 33 acres of crop unused and going to waste. Will lease for term of years crop rent only or will pay you to work it for me.—J. F. Bean, Box 471, Cincinnati, Ohio. 22-471a
