## Dancing Pumps

Clever Plain Pumps; high grade stock; Brown Kid, Black Kid or Patent; with French Heel; Anniversary Sale **\$7.90**

# WARNER'S

## DESCHUTES PLAN MAY BE CHANGED

### DECREASE IS SHOWN IN WATER FLOW

State Engineer Anxious To Treat Entire Project As a Whole, Insofar As Possible, He Reports To the Reclamation Chief.

SALEM, Oct. 9.—The fact that the Deschutes river, like many other streams in Oregon, has, in the past few years, fallen below its normal flow, may necessitate a revision of the plans outlined in the cooperative state and federal report on the Deschutes project, is the declaration made by State Engineer Percy A. Cupper in a statement prepared for F. E. Weymouth, chief engineer for the United States reclamation service, with headquarters at Denver. "It is the policy of this office," Mr. Cupper says, "to consider the project as a whole, insofar as possible, and to release no water without carefully considering its effect on every other unit and, in fact, having a well-developed plan as a basis for action."

Mr. Cupper's statement outlines the work done on the several irrigation projects in Oregon which have been jointly investigated by the state and the federal reclamation service. Regarding the Deschutes project, he says, in part:

"The cooperative report deals with the Deschutes project in four units: designated as the North, South, East and West units. It is planned to reclaim all units with the water stored in the Benham falls reservoir. This reservoir, therefore, is of vital importance to the entire Deschutes project, there being no other basin or number of basins of adequate capacity to store sufficient water for the reclamation of the 200,000 acres or any substantial part thereof, involved in the four units of the project."

"On account of the volcanic formation of that section and the fact that the Tumalo reservoir constructed by the state had developed excessive leaks, it was deemed advisable to make a further investigation, and in 1919 Professor W. O. Crosby, Consulting Engineer Wiley and Consulting Engineer Homer Hamlin were designated by the United States reclamation service to make a geological investigation of the Benham falls reservoir site and report upon its desirability for storage purposes. This investigation was made at the joint expense of the state and United States reclamation service and in accordance with the cooperative agreement supplemented by a specific agreement covering this work.

"The report of Professor W. O. Crosby has been received and is, in general, favorable, indicating that there is little likelihood that any difficulty will be encountered in the storage of water in the Benham falls reservoir site."

## STORM FORECASTED BY BIRDS AND DEER

Southward Flight of Thousands, and Herding of Blacktails Followed By Heavy Fall of Snow.

Another fall of snow in the mountains was reported on Friday by Robert Llewellyn, trapper, who is spending the day in Bend from his home at Little Lava lake. Ample warning of the last storm, a week ago, was given by the action of the blacktail deer, the animals herding together instinctively for protection against bad weather, Mr. Llewellyn said. Brants flew south over the lake by the thousands, but other migratory birds, for some inexplicable reason, failed to seek a warmer climate.

## IODINE AND LYSOL ARE NEARLY FATAL

Bend Women Drink Poison, But Lives Are Saved By Use of Antidotes and Stomach Pump.

Prompt administration of antidotes save the life of Mrs. Jeannette Finley, who swallowed an ounce of tincture of iodine at her home on East Third street last week it was learned today. Another nearly fatal drink was taken last night by Mrs. Albert Estebonet, residing on Harriman street. Two ounces of lysol was removed by the use of a stomach pump. She is now out of danger.

## Large Majority Names Harding In Straw Vote

Harding was an easy favorite when an impartial straw vote on the streets, in the hotels and in stores and office blocks was taken last week and afternoon by J. B. Miner, Bend real estate operator. The results showed 300 for Harding, 139 for Cox, 30 for Debs and 4 for Christman. After completing his totals, Mr. Miner declared that he was surprised at the big majority polled by the republican candidate. Votes were chiefly collected on the streets, Mr. Miner posting himself at the principal street corners and accosting every individual who passed, asking his or her preference. If anything, the democrats were given the better of it, Mr. Miner stated, for a number of well-known members of that party, who could not be seen, were counted in the final enumeration, while one or two office buildings, considered republican strongholds, could not be visited for lack of time, and no effort was made to estimate the vote.

## TRICK PLAYS WIN FOR CENTRAL TEAM

Game On Depot Grounds Results In 19-0 Victory Over Reid—To Play High School Midgets Soon.

By using a variety of trick plays the Central grade school defeated Reid school, 19 to 0 last week on the depot grounds. The Reid players showed plenty of fight, but lack of teamwork proved their downfall.

For Central, Kelly made all three touchdowns and converted one goal, while Paddy starred on the defensive. Brown was the star performer for Reid.

The Central boys will probably play the freshmen midgets soon, and if they display the same fight and teamwork as in yesterday's game, they are expected to give their older opponents some stiff competition.

## WILL APPEAL RAILWAY CASE

DEFINITE APPORTIONMENT OF STOCK BY COURT OBJECTED TO BY HEAD OF PORTLAND & SOUTHEASTERN PAPER ROAD.

PORTLAND, Oct. 7.—An appeal to the supreme court, based on that part of the judgment given by Judge Morrow on the Portland & Southeastern railway adjudication case which definitely apportions holdings of stock in the railroad corporation, will be taken. Notice of appeal was filed by Michael Lynott, S. C. Spencer and J. F. Quirk. The case in circuit court was brought by H. S. Huson.

The original hearing on this case ran into weeks and a vast amount of documentary evidence was introduced. It was brought by Huson to adjudicate the rights of all parties at interest in a railroad project that was promoted before the war, held up during that period, and which, it is said, has prospects of being financed by eastern capital if litigation is cleared away. It proposes to reach out into a potentially rich agricultural district not now touched by railroads and to traverse one of the largest sections of timber lands in the Northwest.

## PLAN LYCEUM COURSE FOR MILL EMPLOYEES

First Number of Series To Be Given At Gymnasium October 15—Many Season Tickets Sold.

The first of a series of lyceum attractions, to be put on at the gymnasium at intervals of about three weeks, is set for October 15, the date of the arrival of the Temple choir, it was announced today by Frank Anderson, heading a committee of Shevlin-Hixon and Brooks-Scanlon employees, which has arranged with the Ellison-White company for the lyceum series.

The chief object, Mr. Anderson explains, is to put such attractions within the reach of all mill employees,

## C. O. I. AT OUTS WITH DISTRICT

NEGOTIATIONS BROKEN OFF, CHIEFLY BECAUSE OF LONE PINE CONTRACT, SAYS ATTORNEY FOR SETTLERS.

Unwillingness on the part of the settlers on the C. O. I. district to accept the obligation to furnish the Lone Pine irrigation district with water has caused a definite break in the negotiations between the settlers and the company for the acquisition of the company's interests by the district, it was stated by H. H. De Armond, attorney for the settlers. That the matter will be reopened was definitely stated by Mr. De Armond. The Lone Pine question will still remain to be disposed of, however, and he intimated that this could probably be arrived at only through compromise. The Lone Pine contract is objected to by the settlers on the ground that insufficient water is available to take care of the added district. A decision on this point is still to be given by the desert land board. All other details had virtually been settled, Mr. De Armond said.

Foremost among the reasons adduced by the C. O. I. attorneys for breaking off negotiations is the charge that the C. O. I. district has never been legally organized. In addition, it is claimed that the Oregon laws for making assessments and levying taxes have not been conformed to, that the board of directors has failed to meet in accord with the published notice given, that the minutes of the board are not open to inspection, and that the budget listing of warrants is less than the actual warrants outstanding.

and because of this, the series tickets are aimed merely to cover actual costs. Already some 700 have been disposed of, and it is expected that another 100 will be added to this number.

Concerts by the Shevlin-Hixon band will be given in connection with each number during the season.

Put it in The Bulletin.

## LIBRARY NOTES

The county library is making a decided gain in the number of new borrowers. In July the number was 75, in August 95, and in September 100. This shows an increasing interest in the advantages which the library has to offer.

The library has received about 100 more books as gifts from the state library as a part of the apportionment of books from the war libraries. They are mostly business and technical books. The following are now on the shelves, ready for use:

Harrington—Essentials in Journalism.  
 Friedman—American Problems of Reconstruction.  
 Pratt—Work of Wall Street.  
 Huebner—Life Insurance.  
 Utter—Everyday pronunciation.  
 Gourio—My French Companion.  
 Merrill—Studies in Zoology.  
 Craig—Common Diseases of Farm Animals.  
 Hatfield—Modern Accounting.  
 Cherington—Advertising as a Business Force.  
 Hollingworth—Advertising and Selling.  
 Mahin—Advertising.  
 Griffith—Carpentry.  
 Hodgson—Practical Treatise on the Steel Square.  
 Wheeler—Woodworking for beginners.  
 Goodyear—Roman and Medieval art.  
 Hoyle—Complete Handbook of Games.  
 Work—Auction of Today.  
 Green—History of England.  
 Prescott—Conquest of Mexico.  
 Fiske—Discovery of America.  
 Hawthorne—History of United States.

Put it in The Bulletin.

**Furs and Climates.**  
 The furs of animals whose habitat is in warmer countries is not so durable, does not form as good leather and is less supple than the furs from the animals living in colder climates.

### Progress

Throughout the whole web of national existence we trace the golden thread of human progress toward a higher and better estate.—James A. Garfield.
