

STEADY POUNDING OFFENSIVE BRINGS DEFEAT TO BEND TEAM

The combined advantage of weight, experience and longer practice proved too much for the Bend eleven in its first game of the year Friday against Prineville and resulted in the Crook county boys taking the long end of the 35 to 0 score. Bend played a hard, fighting game, but lost before the steady, pounding attack of the victors.

Prineville's first touchdown was made after six minutes of play, when Smith got away for a 55-yard run to Bend's goal. For the rest of the half the ball was kept in Bend's territory, Prineville scoring three more times with two touchdowns and a drop-kick. Bend's mistakes and ragged playing at times were partly responsible for the results of the half.

In the second, the Bend eleven came back with a desperate endeavor to score. The ball was rushed into Prineville's territory by a series of short passes and line plunges that fairly took the opposing team off its feet. Twice the ball was rushed to within two yards of the Prineville goal, but both times Prineville held tight and recovered the ball on downs. Early in the fourth quarter R. Haner attempted a drop-kick from the 20-yard line, but failed, due to the awkward angle.

Near the end of the game the Prineville boys recovered from the shock of the sudden attack and,

fighting hard, scored two touchdowns in quick succession.

For Bend, Frank Haner was the star performer. Always good for gains through the line, he also worked well on the defensive. Lloyd Blakely, making his initial bow in football as quarter, was obviously too light for his heavy antagonist, but handled his team in fine shape. Forward passing from Coyner to Claypool featured Bend's playing in the last half.

For Prineville, Smith and Mills did all the scoring and, with O'Kelley, were the star ground gainers of the day. Long end runs featured their playing.

POULTRY

KEEP POULTRY HOUSE CLEAN

Excrement Harbors Parasites, Contaminates Air and Breeds Contagion of Many Kinds.

Everything about a poultry house should be kept reasonably clean. As a rule droppings should be removed daily, for the accumulation of excrement harbors parasites, contaminates the air, and breeds contagion. After the dropping boards have been cleaned they should be sprinkled with road dust, coal ashes, or land plaster, to absorb the liquid excrement, the poultry division of the United States department of agriculture suggests. Nests in which straw or other similar material is used should be cleaned regularly.

Handy for Spraying Interior of Hen House.

very three or four weeks, or oftener if it becomes damp or dirty.

The quarters should be thoroughly whitewashed at least once a year, late in summer or early in the fall. The whitewash can be made by slaking lime in boiling water and then thinning to the proper consistency for applying. The addition of four ounces of carbolic acid to each gallon of whitewash will increase its disinfecting power. The runs should be plowed occasionally in order to bury the accumulated droppings and also to turn up fresh soil.

KILL DEVITALIZING INSECTS

Paint Roosts With Kerosene Oil to Get Rid of Mites—Use Blue Ointment for Lice.

The protection from mites means simply to paint the roosts about once each week with kerosene oil and the lice can be killed off for the summer by giving each bird the blue ointment treatment at the beginning of hot weather. This has been told many times by poultrymen and probably there is no poultry fact that needs more frequent repetition than the best method of killing these devitalizing pests.

CULLING POOR LAYERS

1. Call all hens that show:
1. Well along in the molt with combs and wattles dried up.
2. All that have lay bones less than two fingers apart and small capacity.
3. Abdomen and vent dry and puckered.
4. Yellow shank and beak.
5. Apply all the test; don't apply just a part of it—do it right.

DRY MASH FEED FOR CHICKS

Animal Food in Some Form, Preferably Buttermilk, Should Be Kept Before Fowls.

A dry mash feed should be kept before the chicks continuously—a mash feed containing animal protein in some form, preferably buttermilk, meat scraps or fish scraps. These elements of animal protein in prepared mash feeds are scientifically dried and do not easily decompose.

GET EGGS FROM TURKEY HENS

Increased Production Can Be Obtained by Feeding Ground Oats, Corn and Other Cereals.

Increase of egg production in turkey hens can be done the same as with chickens, by feeding ground oats, ground corn, kaffir meal, barley meal, wheat middlings, linseed meal, and sunflower seed, in equal quantities. This can be fed dry in hoppers, or mixed with milk or water.

MITE IS ENEMY OF CHICKEN

Insect Does Not Bother Other Fowls to Any Extent—Carried About in Empty Crates.

Chicken mites do not feed to any great extent upon other hosts when chickens are at hand. They are carried about chiefly by the interchange of poultry and in crates and boxes in which fowls are shipped.

BREAK FOWL OF BROODINESS

Hen Should Be Confined to Small Coop Raised Off Ground, Preferably With Slat Bottom.

When hens become broody, they should be "broken up" as quickly as possible, for the sooner this is done the sooner they will resume laying. To break a hen of broodiness she should be confined to a small coop raised off the ground, preferably with a slat bottom. Give her plenty of water to drink; she may be fed or not, as desired. Not much difference will be found in the time required to break her of broodiness, whether she is fed or made to fast. United States department of agriculture poultry specialists say. Usually from three to six days' confinement will break her, but some hens require 10 to 12 days.

The broody hen will be recognized by her inclination to stay on the nest at night, the ruffling of her feathers and her pecking at anyone who approaches her, and by the clucking noise she makes. The fact that her broodiness has been broken up can be recognized by the disappearance of these symptoms.

POULTRY FOR GENERAL FARM

Hen Is Main Dependence for Increasing Meat Supply—Farmer Must Determine for Himself.

The hen, first and last, is the main dependence for increasing the supply of white meat and eggs on a farm, but she requires the aid of turkeys, guinea, geese, and ducks just as, on a dairy farm, the cow requires the aid of pigs, sheep, and goats. The setting of the standard at 100 hens per farm is safe, but no such arbitrary standard can be set for the other kinds of poultry, say the poultry specialists of the United States department of agriculture.

The small farm, with grain fields or neighboring farms in proximity to the barn and dooryard, would, perhaps, be better without turkeys. The farm through which no streams run and which has no large pond would perhaps be better without ducks. But the circumscribed farm on which turkeys would be a disadvantage may be well supplied with streams and ponds so that ducks would be unusually profitable, and the farm that has no streams and ponds may have large range for turkeys. Each farm family will have to determine for itself what

Barred Plymouth Rock is Excellent for Eggs and Meat.

poultry can be profitably kept in addition to 100 hens, bearing in mind always that an adequate number should be kept of all kinds for which free range can be found.

FOOD SUPPLY FOR CHICKENS

Mineral, Nitrogenous and Carbonaceous Constituents Should Be Furnished for Hens.

In supplying feed to fowls, there are three kinds of constituents which should be present in certain fairly well fixed proportions if the desired results are to be obtained most economically. These constituents are mineral, nitrogenous, and carbonaceous, all of which are contained in corn, wheat, oats, and barley, but not in the right proportions to give the greatest egg yield. In addition, some animal feed and green feed should be supplied.—United States Department of Agriculture.

POULTRY NOTES

Keep the nests clean; provide one nest for every four hens.

Chicken mites are one of the causes of the high cost of eggs.

A fine thing for warm weather is either skim milk or buttermilk.

TANLAC

FOR SALE BY The Owl Pharmacy

Sole Agents

Sell, kill or confine all male birds as soon as the hatching season is over.

A good cockerel generally is worth all the cost and a poor bird is dear at any price.

If you do not care about having meat for the table and want chickens for eggs only, choose the White Leghorns or Anconas.

It is a good plan to give the poultry house a good coat of whitewash at least once a year; sometimes it will be advisable to whitewash it twice a year, fall and spring.

PROFITS IN POULTRY FLOCK

Farmer Should Be Careful to Gather Eggs Regularly and Market Them Promptly.

NOTICE OF SHERIFF'S SALE

By virtue of an execution and an order of sale duly issued out of the Circuit Court of the State of Oregon, for Deschutes County, on the 22nd day of September, 1920, to me directed in a certain suit in said court, wherein Paul Mertshing, as plaintiff, recovered judgment against J. C. Hopkins and D. A. Hatfield, ordering and decreeing that the northeast quarter of the southwest quarter of Section 13, in Township 17, south of Range 14 east of Willamette Meridian, in Deschutes County, Oregon, be sold by the sheriff of said county and state in the manner prescribed by law, and that the proceeds of such sale be applied to the satisfaction of the costs of this suit, and the remainder to the satisfaction of the claims of the plaintiff herein, namely, the sum of one hundred eleven and ninety-one hundredths dollars, with interest thereon at the rate of six per cent per annum from the 11th day of September, 1919, and the further sum of fifty dollars attorney's fees, and the further sum of twenty-five dollars, the costs and disbursements of this suit, and that the above named defendants, and each of them, and all persons claiming by, through or under them, or either of them, be forever barred and foreclosed of all right or equity of redemption in or to said premises, except as provided by statute.

Therefore, notice is hereby given that I will, on Saturday, the 23rd day of October, 1920, at the hour of 10 o'clock in the forenoon of said day, sell at public sale to the highest bidder for cash the above described premises, with said judgment of plaintiff, including attorney's fees, costs and disbursements of sale, said sale to be held at the south door of the courthouse in Bend, Deschutes County, Oregon.

Dated this 22nd day of September, 1920.

S. E. ROBERTS, Sheriff of Deschutes County, Oregon.

LEGAL NOTICES

NOTICE FOR PUBLICATION (Not Coal Land.)

Department of the Interior, U. S. Land Office at Lakeview, Oregon, Sept. 9, 1920.

Notice is hereby given that Hans Zimmerman, of Crescent, Oregon, who, on November 15, 1913, made Homestead Entry No. 07010, for SE 1/4, Lot 1 (10 acres); SE 1/4 NE 1/4, Lot 1 (5 acres); NW 1/4 NE 1/4, NE 1/4 SE 1/4 NE 1/4, NE 1/4 SE 1/4 NE 1/4, NE 1/4 SW 1/4 NE 1/4, NE 1/4 NW 1/4, Sec. 1, T. 24 S., R. 6 E.; SW 1/4 lot 5 (11.70 acres); SE 1/4 NE 1/4 lot 5 (5.85 acres); NW 1/4 lot 6 (12 acres); NE 1/4 SW 1/4 lot 6 (6 acres), Sec. 6, T. 24 S., R. 7 E., Will. Meridian, has filed notice of intention to make final three-year proof, to establish claim to the land above described, before E. L. Clark, U. S. Commissioner, at Lakeview, Oregon, on the 27th day of November, 1920.

Claimant names as witnesses: Fred Smith, Fred Mann, E. H. Haney, C. H. Eaton, all of Lakeview, Oregon. JAS. F. BURGESS, Register.
