NEW Idea for Keeping Fruit Fresh.

To keep fruit fresh for months after it is picked an Argentinian has patented a device that holds the stems in water.

Any Sulphur used to increase crop yields must be extremely fine in order to become available as plant food.

The screen test of our "Diamond S" Brand Refined Flour Sulphur is as follows:

Pass through 48 Mesh Screen, 95%

Pass through 65 Mesh Screen, 90%

Pass through 100 Mesh Screen, 82%

Pass through 150 Mesh Screen, 75%

Pass through 200 Mesh Screen, 60%

Pass through 300 Mesh Screen, 50%

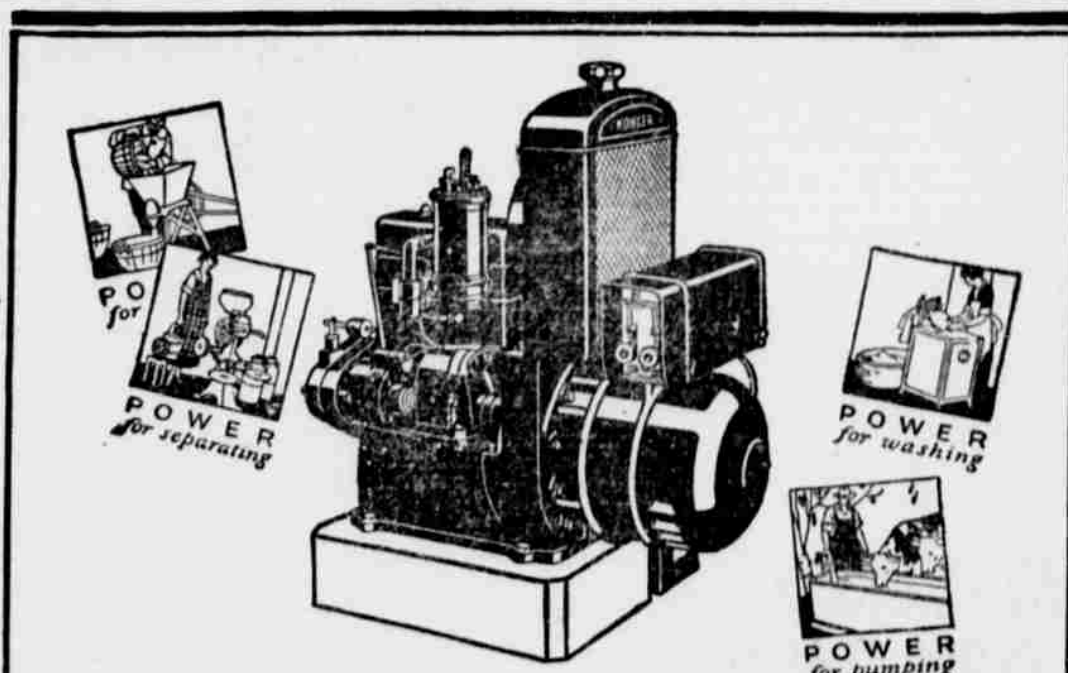

That means that one-half of the "Diamond S" Sulphur will pass through a screen having 90,000 openings to the square inch, and practically all of it will pass through a screen having 2,300 openings to the square inch.

Every pound of agricultural Sulphur used in the State of Oregon during the last five years has been at least this fine.

Before ordering any Sulphur be sure to find out its screen test or whether its value has been proven by real use.
