Miss Nettie Hamlin was operated on at Mountain View hospital yesterday, and is now reported to be making encouraging progress.

Miss Grace MacDowell, Deschutes county nurse, left last night for Portland to attend the health exposition. She will return Monday morning.

Edgar R. Heartt, Deschutes county rancher, and Miss Mary Fryrear, deputy in the office of County Clerk J. H. Haner, were issued a marriage license yesterday.

Miss Wilma A. Ballyntyne and Leon E. Devereaux were married Saturday, October 21, at the home of Rev. F. R. Sibley. Mrs. Devereaux is cashier for the J. C. Penney Co., and Mr. Devereaux is an employe of the First National bank. Mr. and Mrs. Devereaux will make their home in Bend.

Robert W. Casebeer returned yesterday from a business and pleasure trip to Portland. He attended a recital Tuesday night by Miss Alice M. Johnson, soprano, who visited at the Casebeer home here not long ago. Miss Johnson is a pupil of Miss Phyllis Wolfe, who gave a recital here last spring.

Steel Has Great Cutting Power.
"High-speed steel" for cutting tools has been well known for years, and an improved form of this material has been introduced in Sheffield, England. It is reported that this steel has four times the cutting power of any other in use. The composition is, it appears, still a secret, but it is said to be the first "high-speed steel" that can be hardened in cold water without danger. It can also be hardened with oil or in a cold blast.

Tools made of it wear out much less rapidly and require much less grinding than those of the older kinds of steel. They will also go on working at high temperature longer. But the makers themselves say that this steel does not by any means mark the final development of "high-speed steel."—Washington Star.

Imperfection at a Premium.
It was not so long ago that brick "seconds" sold cheaply and were used only in foundations and low-grade work which the eye never found. They were the misshapen, distorted part of each baking and the manufacturers were glad to dispose of them. But finally a builder with an eye for the artistic noticed their colors, which ran from the natural red to odd browns and blues. He experimented and found they had an ancient appearance even when newly laid and, when capped by a rough roof of off-colored slate, carried a distinct atmosphere of antiquity. As a result, strange, queerly attractive houses are appearing all through the country and brick "seconds" are quoted far above their perfect mates.—Wall Street Journal.

Ancient Greeks Took Gymnastics.
In every Greek city was established a gymnasium where crowds of young men exercised themselves naked. This institution was originally intended for those only who were in training for the Olympic games, but afterward it became part of the daily life. The Greeks went to the gymnasium with the same regularity as the Romans went to the bath.—Winwood Reade in "The Martyrdom of Man."

SEEN THROUGH ENGLISH EYES

Traveler Declares American Women Splendidly Domesticated and Versatile to a High Degree.

An entertaining way for the American woman to see herself as she is seen is to follow the comments made by the Manchester Guardian's correspondent in America, Muriel Harris:

In her home the American woman is domestic almost in the German sense. There is no handling over the kitchen entirely to the cook, for instance. There is no hard-and-fast line which leaves this to the maid and that to the mistress. Domestic crises are more frequent even than in England, but when they occur it is no special tragedy, because the mistress of the house is practically always able to fill in the gap without shaking the foundations of the household. American women can nearly all of them cook and sew and do anything in the house from managing the furnace to seeing that the electric fuses are in order.

In our sense, she is far more domesticated and less well educated than is the European girl. The rather casual education of the girl gives full play to any versatility she may have, and there are, correspondingly, brilliant flashes in her, as also unexpected failures. To the foreigner, it is odd to see her scrubbing her own sink—a very nice white sink, by the way—and attending assiduously lectures on French—all with the same enthusiasm. It completely dispels the idea of the luxury-loving, restless woman that in Europe she is commonly regarded as being.

PEAT BOGS TO BE UTILIZED

Commercial Value of Immense Deposits in Northwest Germany Has Not Hitherto Been Realized.

The more or less successful installations in northwest Germany for the utilization of the immense peat bogs that exist there has led to the suggestion in England that the huge bog of Allen in Ireland may next become a great center of industry. The German undertaking has contemplated the bringing of a large part of the bogs under cultivation, together with the conversion of the peat into fuel, to be employed in the development of electrical energy for agricultural purposes, as well as for supplying light and power to a number of towns situated within a radius of fifty miles. A network of canals is, it is reported, in process of formation to drain the ground, and the peat dredged out is to be utilized in the way just described. It is estimated that the gas produced from the peat will furnish work to the amount of 600 horse-power hours for each ton, and a large quantity of ammonia will be recovered for use as fertilizer.—Washington Star.

Fur Neck Pieces!

A Fur Neck Piece adds the final touch of smartness to your street costume.

They are also a great comfort when winter's icy fingers are seeking to nip you, and the blustering wind is buffeting you about.

WARNER'S

LEADS IN HOME OWNERSHIP

According to Population, Canada is at the Head of All Nations in That Respect.

Canada has a larger percentage of home owners in its population than any other nation, according to recently compiled figures of the census department.

London, Ontario, leads among Canadian cities with 80 per cent of its inhabitants owning their own homes. Hamilton and Calgary have 60 per cent home owners, Toronto 55 per cent, Halifax 51 per cent, Vancouver 45 per cent, Edmonton 45 per cent, Winnipeg 44 per cent, Ottawa 40 per cent, Montreal 5 per cent.

Montreal, the largest city in Canada, pulls down the general average to 35 per cent for the ten cities. Taking into consideration the country districts, it is believed by the census experts that nearly 50 per cent of the people of Canada own their own homes. Canada is a land of farm owners where the tenant farmer is almost unknown.

The ten cities covered by the figures range in number of residences from 9,000 to 134,000. Of 72 cities in the United States with a population of 100,000 or more, only two, Des Moines and Grand Rapids, it is declared, have a 50 per cent population of home owners. Des Moines tops the list with 51.1 per cent while Grand Rapids has only a shade fewer. Recent government statistics in the United States show that 45.6 per cent of the people of the United States own their own homes and 54.4 per cent live in rented quarters.

Esthetic Butterfly.

The red admiral butterfly never goes near anything that is bad smelling, but loves honey that it finds in the flowers.

Judging Others by One's Self. Confidence in another man's virtue is no slight evidence of a man's own. —Montaigne.

Beliefs Concerning Lightning.
Continental Europe had, and has, its superstitions regarding lightning. In some parts it is believed that the bird called cross-bill, kept in the house as a pet, is a sure preventive of destruction of the house by lightning or fire. It is said that this power is granted to the bird because it used its peculiarly shaped bill, with the two mandibles curved and crossed over each other, to extract the nails from the wounds of Christ impaled on the cross.

How Aluminum Occurs.
Aluminum is not found in a pure form, but in combination, chiefly as an oxide in the mineral corundum (ruby, sapphire and emery); hydrated oxide in bauxite, hydrargillite and diaspor; hydrated phosphate in wavellite; hydrous sulphate in combination with potash in alunite and in combination with oxygen and metals as aluminates, as in spinel, chrysoberyl and garnite. It also is found as a silicate in various clays. Its chief ore is bauxite.

"Gentlemen of the Guard."

The original function of the household cavalry was to protect the king's person, and Charles II saw to it that his life guards were recruited from old Cavalier families. Even the privates were men of very good families, and were well paid. Their fine uniforms and finer swagger were an essential part of the splendor of Whitehall. They were called "Gentlemen of the Guard."
