

TELEPHONE CO.'S BUSINESS IS BIG

GROWTH IS MARKED IN LAST YEAR.

New Directory Issued Shows 325 Stations Here—Demand Heavy for More Service, Which Improvements Will Allow.

There are 325 telephone stations in Bend, as listed in the directory recently issued by the Pacific Telephone & Telegraph Company, which has been mailed to local patrons in the last week. The number of telephones now in operation in Bend has increased more than 80 in the last year without additional exchange facilities with which to accommodate the increased business.

Pending the extensive improvements in the system in Bend, totaling several thousand dollars, J. L. Gaither, local manager, is holding now more than 100 telephone orders of prospective Bend patrons of the telephone company and hopes, as soon as the improvements can be made, to give service to persons who have been asking for it for several months.

One of the big jobs upon which the Pacific Telephone & Telegraph Company will be called upon to complete within the next few weeks and that is the exchange and 63 connections for the Pilot Butte hotel.

In sending out the new telephone directories, Mr. Gaither hopes to impress the telephone company's patrons of the necessity of calling for connections by their numbers. For the last several months operators have been handicapped in giving the prompt service that the company hopes to produce, due to the absence of names from the old Pioneer Telephone & Telegraph Company's directory. Now that all the names of telephone patrons are in the new book, the company is going to be insistent upon calling for connections by number.

In the publication of the telephone directory, separate issues have been made for Bend and Prineville. In the Bend directory the names under the jurisdiction of the Bend exchange appear in the front of the book, while the opposite in true of the Prineville directory. In the Prineville directory there is a supplement of names formerly served by the Independent Telephone Company, of Prineville.

Kunz Wants All of Us Catalogued So Government May Use Us In Wartime

Photo by American Press Association.

Dr. George F. Kunz, the famous New York gem expert, geologist, etc., and retiring vice president of the American Association for the Advancement of Science, told the association at its convention in New York that for national defense purposes the entire population of the United States should be catalogued and the men classified according to their various abilities or adaptation under the letters A, B, C, D, etc., showing their fitness for their various vocations according to a percentage up to 100. An examination of these men should be made two, three or four times a year so that one could judge in the case of a ditch digger, a mechanic, a soldier—or whatever the other vocation might be—whether the man was at a 20, 30, 50 or 100 per cent standard. This need not involve heavy expense. The men could be weighed, their temperature taken, their eyes examined and a summary judgment formed of their actual health. The rating as to fitness must of course depend upon experimental tests. However, in a large majority of instances the attestation of the manager or superintendent under whom the workers were placed would afford the most conclusive evidence as to their degree of fitness.
