**WASHINGTON (UPI)**—Americans smoked a record 523 billion cigarettes in 1963—despite recurring reports blaming smoking as a cause of lung cancer and other ailments.

The 1963 cigarette total was almost 3 per cent more than the total for 1962—508.2 billion cigarettes—and marked the seventh consecutive year that smoking has increased in the United States.

The Agriculture Department noted that the increase between the 1962 and 1963 total was significantly more than the 1 per cent increase between 1962 and 1961. From 1955 to 1960 the rate of increase in cigarette consumption averaged 4 per cent a year.
