

# To the Ladies!

We take great pleasure in announcing that we are now prepared to make Ladies Suits and Coats, as well as Mens.

We have secured the services of a tailor who has had years of experience in the art and study of fine tailoring.

When you order a suit from us you know that you are going to get the goods, style and workmanship. When you order a suit thru a mail-order house, you don't know just what you are going to get; you don't see the goods and the work is done by machinery and when the suit is received in most cases alterations are necessary before you can wear it.

You save time and money and we guarantee you satisfaction when you order thru our store.

Judge Will R. King and Hon. Joe Teal are both spoken of as possibilities for Secretary of the Interior in the Wilson cabinet. Either would be a credit and an honor to the west.

It has been a case of "catch as catch can" in the daily papers recently as to whether Wilson or Roosevelt had carried California. It is such a beautiful mix that we have forgotten which had it last. One day one is reported ahead and the next the other fellow has it.

The work of President Kerr of the Agricultural College in securing federal aid in the advancement of agriculture in this state should receive just recognition from the people and the legislature will no doubt take advantage of the opportunity and act accordingly.

According to the Portland papers the land show held in that city this week has been a decided success, and has opened the eyes of the people as to the possibilities of their own state. This show should now be made an annual affair. It is the only way to give an adequate idea of the greatness of the resources of the state and especially the interior portion that awaits development.

### Settling our Lands.

Getting people on to the land, actual settlers and actual producers, is the greatest problem that Oregon has before it today. The land is here and it is of a quality that commends itself. But we find that while the cities and towns are growing in population, the growth of the country by no means keeps pace with them.

We have heretofore called attention to these facts. We do not believe there is a more important question before the public and one which is apparently so little understood. There are very definite emigration movements in other directions. Canada has been getting a very fine body of American settlers, precisely the class that would be desirable here, the South is getting some of them, and others are actually going to New York State under the inducements offered them.

It is apparent that the question before us is something more than superficial. If it were something on the surface it would be very easy of solution. Just precisely what it is and how to meet it is the question before the public and it should receive serious consideration. So long as such land as is bought is often bought solely for speculative purposes and not by men who propose to farm it, we are not getting very far ahead. What is needed is that the land be bought by people who will live upon it and utilize it for productive purposes. In this way the backbone of the state will be strengthened and Oregon, in a productive sense, will begin

to take its place high up in the list where it properly belongs.

This matter is of such importance that it should be given special study and investigation. Telegram.

### Canners Getting Scarce

Improvement in the quality of the cattle produced in this country, and particularly in the west, has been going on slowly but surely for years. An evidence of this is seen in the great scarcity of canning stock all season. For many years a good share of the cattle coming from the west and southwest were sold to the packers as canners but packers have been unable to get what canning cattle they needed during the past summer altho they have been paying the highest price ever known for this class of stock. Even now the packers are scouring the country for thin and aged cattle for canning purposes. It looks as if the stock growers were beginning to find out that raising scrub stock is mighty unprofitable and the packers of the United States will soon be compelled to go out of the meat business and leave this branch of industry to the packers of Australia and also South America—Drovers Journal.

### ADDITIONAL LOCALS.

J. C. Dodson was a departure on Monday's train for New Mexico to receive a bunch of stock cattle he bought there recently and incidentally to make some further ventures in the stock business providing he can find any more salable cattle.—Lakeview Examiner.

Supt. Brethaupt of the Experiment Station is mailing out a large number of letters to the farmers of the county asking them to take an interest in the coming short course to be given at the county high school in February. We hope there will be a large attendance as it will certainly result in much benefit to those who do.

The freshman class of the high school played a game of basketball with a team from the higher classes at Locher's hall Thursday night but were somewhat over-matched. However the younger boys put up a good game which was witnessed by a large crowd of friends. No doubt there will be more such games during the year but they should make them up in such a manner that they will be a contest.

Some new wheat has been discovered and grown to some extent near San Francisco which promises to be a boon to the wheat raisers if it will do the miraculous things in the way of yielding that advance reports of it promise. A. E. McCulley, well known Cold Springs farmer, says the Helix Advocate, is to receive an eight-pound seed sample of this grain which is called "Miracle wheat" from a relative in a few days and will sow it on his ranch for a test. The wheat is said to have yielded as much as 100 bushels per acre of fine grain, and in sowing 20 pounds to the acre is supposed to be ample seed. Even if this wheat did not quite come up to this yield it is possible that it will produce remarkable results if any can be obtained to give it a thorough test in the ideal wheat ground of Umatilla county.—Athens Press.

## HIGH SCHOOL COURSE IN AGRICULTURE

(Continued From First Page)

11. Animal Husbandry III (Livestock Management.) Junior year, second semester. Two recitations per week.

A study of the practical methods of the care and management of livestock; shelter; stabling; sanitation; fundamental principles of animal nutrition; the use of the more important feed stuffs of Oregon; the common ailments of farm animals; symptoms, methods of treatment and methods of prevention; selection of breeding stock; care of breeding stock; and a study of the livestock interests of the county.

12. Agronomy V (Soil Physics.) Junior year, second semester. Two recitations and one laboratory period per week.

An advanced study of the physical properties of the soil including its origin, formation, composition and classification, soil moisture and its conservation; physical effect of humus in the soil; soil temperature as affected by color and drainage; physical improvement of clay soils by the use of lime. A careful study is made of the various physical processes in the soil—surface tension, capillarity, osmosis, diffusion, etc.; the effects of the various crops and different culture methods upon the texture, aeration, temperature, moisture and food supply of the soil.

Laboratory work will consist of experiments to determine the water holding capacity, humus content, specific gravity, effects of mulches, etc.

13. Agronomy VI (Dry Farming.) Senior year, first semester. Three recitations.

A study of farming practices as applied to arid and semi-arid regions. The principles of moisture conservation; special tillage methods for dry farming; implements used for dry farming; crops for dry farming; best methods for regulating evaporation; transpiration; plowing and fallowing; sowing and harvesting; the history of dry farming and its present status and importance.

14. Dairy Husbandry II (Dairy Herd Management.) Senior year, first semester. One recitation and one laboratory period.

A study of the most up to date practices of dairy herd management. Selection of the breed best suited to the existing conditions; starting a dairy herd; selection of the individual cow by judging and by the use of the Babcock tester; selection and care of the dairy herd bull; rearing the dairy calf; development of the dairy heifer; care of the cow at calving time; best methods of feeding for milk production; disposal of the product.

15. Agronomy VII (Soil Fertility.) Elective senior year, first semester. Two recitations and one laboratory period.

A study of the chemistry of the soil. Chemical composition of the soil. The effect of various crops upon the fertility of the soil. The effect of different rotations upon fertility and the planning of rotations adapted to the student's home farm. The effect of manure, cultivation and drainage upon the soil. The fertility of the soils in the surrounding country; their plant food requirements and comparative values; methods of improvement of each. A study of the comparative yields of the neighborhood; root tubercles and soil inoculation; commercial fertilizers—their value and use; barnyard manure as a source of fertility; practical methods of maintaining fertility.

16. Animal Husbandry IV (Animal Feeding.) Senior year, second semester. Two recitations.

A study of the elementary principles of animal feeding. The use of protein fat, carbohydrates and minerals. The various feed stuffs available in the county and state are discussed and compared as to their value for the different kinds of livestock. Composition of foods and digestibility; the function of the various classes of compounds in the animal body. Some time is devoted to nutritive ratios, feeding standards and compounding and balancing rations; kinds of feeds—concentrates and roughage; succulent and dry. Food requirements and feeds for maintenance, growth and work; system of feeding for the production of horses, beef, mutton, wool, pork and milk.

17. Agronomy VIII (Farm Management.) Senior year, second semester. Two recitations and one laboratory period.

A study of some of the problems in the management of a modern farm. Points to be considered in the selection of a farm, followed by a study of the different systems of farming adapted to Oregon conditions. Capital

required to begin farming; expenditures for land, buildings, livestock, machinery and implements; labor—manual and team. Farming compared to other lines of business; marketing problems, transportation, distance from market as affecting kind of crops to be grown. The application of business methods to farming operations; records and accounts; inventory valuation and records; the cash book; farm, dairy, swine, poultry and crop records. A study of the special types of farming; economic management of the fields, crops, livestock and machines; rates of depreciation; arrangement and care of farm buildings.

18. Animal Husbandry V (Animal Breeding.) Elective senior year, second semester. Two recitations.

A course taking up the general principles of breeding. Fundamental laws of breeding. A study is made of variation—kinds and causes, mutations, transmission, heredity, prepotency, selection by merit and pedigree, systems of breeding—up-grading by use of pure bred sires, crossing, line breeding and its results, inbreeding and its results; parental influence of sire and dam; determination of sex; testing of sires and dams; community breeding; keeping records of breeding and performance.

### Antiquated Mail Service.

The Blue Mountain Eagle at Canyon this week sends up a protest respecting the mail service. The people of this place have done likewise but have no assurance of any relief. It has been put up to the department before without getting much satisfaction. Even though the local contractor has to go to Austin for the mail it should reach here at an earlier hour. His schedule call for its arrival in Burns at 4 o'clock and it seldom reaches here before 8:30 and more frequently it is after 9. The Eagle says:

A voluminous protest coming from Prairie City, John Day and Canyon City, is being sent into the government, regarding the antiquated mail service given the county. The government, through the Forest Service, appropriated about 55 per cent of the total area in acres of the county and collects a toll for its use, which the people pay without complaint. In return the people get a sack of garden seed bi-annually and a mail service that would be a disgrace to the land of Hottentots. The people are in favor of the government supervision of 55 per cent of its area and so was expressed by the stockgrowers' association last week, but they want some consideration. They pay in thousands of dollars and draw out a sack of seeds that grow sometimes. The government contracted with the Sumpter Valley railroad to haul the mail as far as Austin. It then beat down the stage company to starvation wages to haul it from Austin, paralleling the railroad, to inland points. Because the railroad company and stage company do not agree on the charges for hauling the mail from Austin to the terminus of the road the mail is dumped off at Austin and the stage instead of getting it at Prairie City, where it should, is compelled to go over the mountain after it. Instead of getting mail at night it is held up until the following day. If such administration of the postal department was credited to Turkey it would be a surprise, and when it comes from a government that makes a noise about the efficiency of its service it is a revelation. If there is no remedy for such service all we can do is to say to the government to keep the garden seed also, and we will forget entirely that we live in America.

Mr. Jokisch is trying to awaken a greater interest in spelling in the High School. The pupils had a spelling contest Friday afternoon. The following prizes were donated by business houses: Reed Bros, box of stationery; Geer & Cummins, manicure scissors; N. Brown & Sons, neck tie; Mamie Winters, box of candy; Reed Grocery, box of fruit; I. Schwartz necktie, Welcome Pharmacy, paper knife; Lunenburg, Dalton & Co., pocket comb; Mr. Gemberling, silver book mark; Williams-Zoglmann Clothing Co., necktie. The following pupils stood highest and received the above prizes: Edgar Williams, Esther Hught, Charley Foley, Roberta Hibbard, Donald Hotchkiss, Hilda Tupker, Eloise Tupker, Eloise Hibbard, Poleman Skeins, Bessie Smith, Henry Geer, Dor-man Leonard.

J. D. Taylor is in the city from Buchanan.

## HISTORY REPEATS ITSELF

The sworn statements of Life Insurance Companies on file at the State Insurance Department, Salem, show that in 1909, 1910, 1911, Oregon Life the Only Life Insurance Company Exclusively Oregon, sold more policies in Oregon than any other company.

In 1912 Oregon Life is surpassing all its previous records. BEST FOR OREGONIANS

E. C. EGLESTON,  
Agent.

## New Goods! New System!

### Low Prices!

Having cut out the long credit system, we are prepared to give prices which will pay you to buy at home. Remember, when you buy at home you create a market for what you have to sell, no matter what it consists of, whether it be farm products, labor or legal advice, you don't help your own community, when you go outside to trade; you don't help the farmers when you buy outside flour. Last year many people sent away and went outside to trade. What is the result? The wheels of industry have been idle, no building, no business, no work, no market. Heavy crops are being harvested and still a large portion of the old crop is on hand. It is now time for the people to get together if they want prosperity at home. Trade at our place if you can; if not trade with our competitor; but Trade at Home

CONTAIN NO HARMFUL OR HABIT FORMING DRUGS

## Why Salves Can't Cure Eczema

Since the old-fashioned theory of curing eczema through the blood has been given up by scientists, many different salves have been tried for skin diseases, but it has been found that these salves only clog the pores and cannot penetrate to the inner skin below the epidermis where the eczema germs are lodged. This—the quality of penetrating—probably explains the tremendous success of the well known liquid eczema remedy, oil of wintergreen, thymol, glycerine, etc., as compounded in FOLEY'S Prescription. If you do not find that it takes away the itch AT ONCE, if costs you not a cent.

troubles but none that we can recommend as highly as this for we know that FOLEY'S stops the itch at once. We can give you a trial size bottle for 25 cents that will be enough to give it. Of course all other druggists have D.D.D. Prescriptions—go to them if you can't come to us—but don't accept some big profit substitute.

But if you come to our store, we are certain of what FOLEY'S will do for you that we offer you a full size bottle on this guarantee—if you do not find that it takes away the itch AT ONCE, if costs you not a cent.

We have sold other remedies for skin
