'After a few years of careful thought and consideration on the question of putting in the silo I at last bought a good silo secondhand at a public sale. writes a Pennsylvania farmer in the American Agriculturist.

I plant my corn about one-fourth thicker than for a regular crop, as 1 want many good, large ears in the When planted too thick the stems are too light and I do not get enough corn for a good feed. The slinge if properly cut into short lengths and well packed so as to admit of no air to it will be julcy and nutritious and, being palatable, cattle will thrive well on it and come out in the spring in good flesh and shed their hair much sooner than cattle kept alone on dry feed.

I begin to cut corn for silage when near the ripening stage-just when the corn on the ear is dented and nearly fit to cut for shocking and before the lower leaves have died off too much. At this stage I seem to get about all the feeding value out of it, and there is still enough moisture in the stalk to

Photo by Kansas Agricultural college

Elizabeth of Juneau, world's champion Ayrshire cow, is owned by the Kansas Agricultural college at Manhattan. The world's best three-year-old Ayrshire finished her year's trial not long ago with 15,-23 pounds of milk to her credit, 63 pounds more than the cow which has until now held the championship record. Elizabeth contributed during the year 525.5s pounds of butter fat, equal to 628 pounds of butter. The average test for the year was 1,534 per cent. Her ration has consisted of the general herd retion of four parts corn, two parts bran and one part olimeal Elizabeth of Juneau, world's parts bran and one part olimeal as a grain ration, and she has re-ceived all the alfalfa and slinge she

gets too dry add enough water to make It pack well. When I am ready to fill the silo I try to get enough help to keep a cutter and engine busy.

There is much to be gained by hav ing an extra man or more to handle the corn, for it is a heavy job. I aim to have two men in the silo to tramp and pack it well and distribute the corn and leaves into all parts of the silo. My silo is the round stave silo of cedarwood, and I figure I can grow corn under ordinary conditions and put it into the silo for \$1.50 a ton, and I also figure that every ton of silage is worth \$4 to \$5 a ton when compared with other feeds. I live on a farm of 130 acres, where I grow a variety of crops, such as corn followed by oats, followed by wheat, and occasionally a second crop of wheat with which I seed over land to grass, timothy and clover. This hay I had formerly fed out to my stock. The cows, horses and sheep were also fed much of the corn and corn stover.

With a silo I can now hold over much more and better feed for my cows and sheep, and the sllage is produced on much less acreage. This is very strong point in favor of the silo. I can farm better without the automobile than without a silo. The fatteners of cattle for beef claim much larger gains by the use of slinge for feeding. Silage seems to furnish just what the dairy cow wants and also what the steer wants for taking on

I have paid for the silo many times over by selling the hay I would have fed to my cattle, sheep and other stock, and there is no food to equal good corn sliage if properly put up.

Feed For the Colt.

Too few of the colts on most farms receive any other means of sustenance except their mothers' milk till they are ready to wean, writes a correspondent of the Iowa Homestead. Of course the colt will graze some, but it will not develop and thrive as well on grass and milk as it would if properly fed on a little grain and mill feed stuff. We begin to tempt the colt to eat of a little grain, mill feeds and clean, bright roughage just as soon as possible. With a small trough containing some grain and placed where the colt frequents, it quickly forms the habit of We have found a most satisfactory

feed for the colt to be one part corn chop, one part bran and two parts oats. These form a ration that will furnish bone and muscular tissue for the young and rapidly growing body and at the same time supply sufficient material for putting on a little fat and keeping up the heat sometimes necessary.

Corn For the Silo. It was formerly taught by the agricultural colleges that corn should be cut for sliage just when the grain was in the "dough" stage, but experience has demonstrated that good sliage may be made at almost any stage after that, but never before. Silage corn cut too soon lacks substance and feeding quality. It is too washy. If cut after it is dead ripe it may be necessary to make sliage.—Kansas Farmer

NIGHT.

Must day return again? Will earthly influence never cease? Unboly toll desecrates the heavenly calm of night. When shall the mystic sacrifice of love burn forever? Light has its own fixed limits, but night has a boundunfathomable dominion. The reign of sleep has no end. Holy sleep, shed thy blest baim on the hallowed night of this earthly sphere. Only fools fail to understand thee and know of no other sleep than the shades which the actual night casts over us in kindly pity. They see thee not in the purple blood of the grape, in the golden oil of the almond, in the dusty sap of the poppy. They guess not it is thou who boverest around the ender malden, making her heart the temple of heaven, nor dream it is thou, heavenly messenger, who bearest the key which opens the dwellings of the Blessed. Novalis (F. von Hardenberg).

BUTH. She stood breast high amid the

Like the sweetheart of the sun, Who many a glowing kiss had

On her cheek an autumn dush Deeply ripened. Such a blush in the midst of brown was born, like red popples grown with

Round her eyes her tresses fell. Which were blackest none could

But long lashes veiled a light That had else been all too bright.

And her but, with shady brim, Made her tressy forehead dim. Thus she stood amid the stooks, Praising God with sweetest

Nore, I said, beaven did not Where I reap thou shouldst but

Lay thy sheaf adown and come Share my harvest and my bo -Thomas Hood.

EUGENICS.

If a girl is taught that in se epting a man as husband she is choosing the father of her children and made to realize all that that means the chances are that she will be attracted by the right kind of man to begin with and will choose with much greater wisdom. It is not a matter of opposing love with reason, but of directing it wisely. It is only within comparatively recent times, you know, that women have been given the power to choose their mates and apply to men certain tests of fitness. At first these tests were for prowess in war, for daring deeds, for manhood, courage and honor As time went on these demands increased to include industry. virtue, honesty and intelligence, and now they have added a high er moral standard and physical and mental cleanness .- Mrs. M

FRANKLIN'S PHILOSOPHY.

Blame All and Praise All are two blockbeads. No man e'er was glorious who

was not inborious. Jack Little sowed little, and little be'll reap. He that cannot obey cannot

An egg today is better than a hen tomorrow.

If you know how to spend less than you get you have the philosopher's stone.-Poor Richard.

THE COOL, COOL RAIN.

Ob, the cool, cool rain on the dusty street. With scents of the valley and And the freshened breeze in the

thankful trees. Whose wet leaves laugh in the rain! How the panting lilles lean their

And quench their thirst as it beats and drips!

Oh, the cool, cool rain as it rushes down From the broken heart of the cloud!

How it bathes the roofs in the To the peal of the thunder

How its rapid rivulets leap and And cool the steps of the burning day!

Oh, the cool, cool rain, with its brightening drops, On the hill and the fervid

its welcome fall on the thirsty crops, Its balm in the breathing gale! Rejoice, O city, and sing, O

in the fall and call of the cool-
