An Unexpected and Badly Needed Feast In the Arctic.

Nosh in his ark could not have been more delighted over the return of the dove than were the members of Ejnar Mikkelsen's party, in the desert of Greenland ice, with the sight of a fock of wild goese. In "Lost In the Arctie" Captain Mikkelsen tells of their need of food, of the fatigue of a long sledge journey and of his own illness. He had become so weak that he was obliged to ride on the sledge. Consequently their progress was very slow

We drive on between a lot of little talands or banks of glacial ice. Sud-drop its moisture in the form of rain. enly lyerson makes a snatch at the The lakes and rivers of these northern sledge, causing the dogs to halt in astonishment, and whispers eagerly, ture taken up from the gulf stream. "Look, look! What's that?" He points I of course remain where I am on the

We are delighted and drive off southward in the best of spirits. Iverson even stops every now and then to feel the splendid fat bodies of the birds, and we do nothing but talk of what a feast we are to have when they are cooked. The dogs are doing their best. Iverson marches at the rear of the sledge, singing at the top of his voice, and even I feel a lit tle better.

POLAR RESEARCH.

Arctic and Antarctic Problems That Still Remain Unsolved.

The era of pole hunting is now hap plly over, and the best result of Peary's and Amundsen's athletic feats in the north and south is that the really important problems of the circumpolar regions can henceforth be attacked with a single mind. From a scientific standpoint enough work remains to be done in these regions to last for sev eral generations.

The antarctic has only been scratched, so to speak. Owing to the diverse scales used in school geographies the average man goes through life with badly warped ideas concerning the relative sizes of various parts of the earth's surface, and so probably few people realize that the antarctic continent is very much larger than Europe -in fact, about as large as Europe and Australia combined. Of this huge continent we do not know even the shape and location of the coast line, except for one long stretch south of Australia and a few widely scattered points else where, while the whole interior, apart from a narrow wedge between Ross sen and the pole, is virtually blank on

our maps. In the arctic a patch of a million square miles is still absolutely untouched. So much for mere surface geography; but, of course, modern polar research includes a wide range of nongeographical problems pertaining to such diverse subjects as geology, glaciology, meteorology, terrestrial magnetism, seismology, oceanography, zoology, botany, physiology, ethnology and archaeology.—Review of Reviews.

Sure to Return. One morning a merchant whose goods did not very strongly substantinew sign. He was pleased to see that a great many people stopped to read it. but directly he was puzzled and angered to notice that they all went on, laughing. There was nothing funny about the sign. It merely read:

If You Buy Here Once You Will Come Again. The merchant went outside in a casual sort of way and glanced at his sign to see what was the matter. Some one, no doubt a former customer, had added another line. It now rend:

If You Buy Here Once You Will Come Again To Bring It Back. -Youth's Companion

Colored Glasses.

Wearing spectacles to protect the eyes from the glare of the sun is a very old custom. The natives of the far northern regions long ago invented spectacles of wood with a very narrow slit in the center to diminish as far as possible the continual glare of the long arctic day. It is said that the Emperor Nero, who was an albino and whose eyes were therefore very sensitive to light, used amethysts or emeralds to shield his eyes.

His Preference.

"Good gracious," exclaimed a vient as he met a village laborer wearily pulling a loaded wheelbarrow. "I would be much easier if you pushed

"Daresay," was the mawer, "but I'm sick of the very sight of it."-London Telegraph.

His Weigh. "What is the way of the transgressor?" asked the boob. "Fifteen ounces to the pound," replied the grouen.-Cincinnati Enquirer.

Well, It's Suspended. "Pop, tell me one thing." "What is it, my son?" "Is a suspended sentence a hanging

matter?"-Baltimore American. A good lookout drives ill luck away

-French Proverb.

Formation of Ice. The cause assigned for the fact that water freezes only for a comparatively small space at the surface of rivers or ponds is thus explained. Scientists authoritatively declare that water is at its heaviest when it reaches 40 degrees

F.-that is, 8 degrees above freezing point. On a frosty night, as each top layer of water falls to 40 degrees it sinks to the bottom, therefore the whole pond has to drop to 40 degrees before any of it can freeze. At length it is all cooled to this point, and then ice begins to form. But ice is a very bad conductor of heat, therefore it shuts off the freezing air from the body of warmer water underneath The thicker it gets the more perfectly does it set as a greatcoat and that is why even the Arctic ocean never freezes beyond a few feet in thickness.

A Monotogue. Tommy-Pop, what is the difference between a dialogue and a monologue? Tommy's Pop-When two women talk, my son, it's a dialogue; when a woman carries on a conversation with her busband it's a monologue-Philadelphia TWO GULF STREAMS.

The One of Air Is What Creates the Deserts of the East.

The gulf stream, as every one knows, is a broad river of warm water which starts in the gulf of Mexico, wanders across the cold Atlantic ocean and bumps into the British Isles, giving them a warm climate and no end of fog and rain. But few people know that in the atmosphere above there is a second

gulf scream of warm, moist air, This slow, damp breeze strikes the British Isles and does not carom off like the gulf stream, but continues over Europe. As it passes over Sweden, Finland and northern Russia these cold lands chill the wind and cause it to countries are all supplied by the mois-

The rotation of the earth makes this to something that looks like a lot of wind veer gradually to the southward round stones, and I can scarcely be about the time it has given up the last lieve my eyes. It is a big flock of of its moisture and warmth. As a geese, sitting there sound asleep. They mighty draft of dry, cold air, the guif have not heard us. In a few seconds stream wind moves on across the plains Iverson is on his way toward them. of Russia. As it approaches the equator the wind warms again, but becomes ever drier.

At last, as it sweeps over Turkestan, flock rises. Stop a minute! Isn't there Arabia and Sahara, it evaporates like a great sheet of blotting paper all water it meets, forming the deserts of Turkestan, Sahara and Arabia. Fortunately this devastating wind now leaves the continent, becomes the trade winds and returns to its starting point at the gulf of Mexico

Several somewhat visionary schemes have been suggested for altering the course of the gulf stream. One of the immediate results of any such change would be the shifting of the present deserts to other parts of the world. New York American.

MOLECULAR ATTRACTION.

That Is What Permits a Needle to Float Upon Water.

A steel needle laid carefully on a still water surface will float, although the weight of steel or iron is greate than that of an equal volume of water Molecules of liquids cohere, but with a force far less than in solids or viscid substances. But the thin needle of metal gently placed horizontally on water has not quite weight enough to break the surface tension-that is,

molecular attraction-of the water be-Attraction of molecules is a force that exerts great influence in nature. Thus this force draws particles of wa ter in fogs into drops of water which are heavy enough to fall as rain. Dew is a formation of minute particles of

water into drops at rest on surfaces. The molecular attraction of the heavy liquid-mercury-is intense, else this heavy liquid could not be drawn by it into spheres or drops. Melted lend forms into minute globes when let fall in high shot towers.

There is a great difference in the in tensity of molecular attraction, as may be observed in alcohol, gasoline, sulphuric ether and similar limpid liquids and oil, sirup, glycerin and other vis cous liquids.

Soap bubbles could not be blown in alcohol or benzine, but they form read fly in water. And the molecules in the thin films really attract with some force, else the bubbles would burst be fore they become so large. The most elaborate mathematics are required to handle molecular forces, fit only for technical journals.-New York Ameri

Working the Morse Code.

Easiness of the telegraph code has sometimes facilitated evil practices Charles Galbraith, formerly chief su perintendent of telegraphs at described one notable case. Messages used to be brought by mail steamer from Suez to Point de Galle and telegraphed thence overland to Bombay Native operators found it profitable especially during the cotton familie, to communicate the tenor of disputches to outside confederates. At first the method employed was to write a copy of the telegram, roll it up tightly and drop it out of the window. But this was soon detected and stopped. Then the operator would lean his head on his hand as if musing and drum with his fingers. Knowledge of the Morse code by the man outside did the rest.

An inch of Rain.

An inch of rainfall is equivalent to 600 barrels of forty five gallons each to the acre. This amount of water weight over 113 tons. Think of hauling it to the farms in wagons holding a ton each! That seemingly light air and clouds are capable of handling this enormous amount of water is one of the marvels of meteorology. One inch of rain is not such a heavy rainfall, either.-Farm and Fireside

Why She Couldn't. "Why not?"

"He wears a wig. The very idea!" Then the dear creature removed two rats, some puffs, a coronet, a braid, a pompadour, a switch and sat down to peruse a novel .- St. Louis Republic.

"Up to date! Heavens! She's up to everything "- Boston Transcript.

A rat may fond a province.-Ger-

Literal. William Chose, the palater, is a teacher whose criticisms are awaited with some trepidation by his pupils. One "criticism day" Mr. Chase came to the canvas of a pretentious and vain young man, who was considering with obvious complacency a portrait which he had smeared thereon.

"It's coming out nicely." be told Mr Chase said not a word, but took turpentine bottle, paint knife and rag and worked industriously at the canvas un til there was a clean surface there. "Ah, yes," he remarked, "it's coming out nicely."—New York Post.

DIET AND COLOR.

What Man Eats Seems to Determine the Shade of His Skin. What you ent determines your color, ecording to Bergfield, a German inves-

tigator-not necessarily that you yourself could effect any change of color, but your ancestors for thousands years have unconsciously been influenced by the food they have eaten and the drinks they have drunk. For instance, the original men were

black, says Bergfield. Their chief diet was of vegetables and fruits, be explains, and these same foods contain pangamates that are not unlike from Dark browns and blacks result from this combination. It is a scientific fact that pegroes who drink talk and eat meat are never as dark as those who ent vegetables

He goes on to add that the Indian is red because for hundreds and perhaps susands of years he has taken into his system the bacmoglobin or red material in the blood of animals which e has killed for their food.

Agnin. Mongols are yellow because they have descended from races that were fruit enting and who, making their way into the deepest nooks and widest plains of Asia, developed Into shepherds and lived largely on milk Of course it is known that milk contains a certain per cent of chlorine and has a decidedly bleaching effect. In the case of Caucasians they are said to their foods, which common sait is a strong chloride and powerful in blench ing the skin. - Chicago Tribune

ARTIFICIAL RESPIRATION.

How the Pulmeter is Used to Restore Normal Breathing.

The pulmotor is an automatic resus citation appliance which produces a flow of intinted and exhaled air by a single nozzle, the rhythm of respiration adjusting itself automatically to the dimensions of the lung, and thus the astonishing result is produced of a seemingly lifetess body beginning to breathe regularly as soon as the pulmotor is placed in connection with it The pulmotor works directly on the respiratory organs and if the spark of life still exists will fun it into a flame and give the heart and lungs a chance

The pulmotor is used on persons overcome by gas, electric shock, apparent ly drowned or in other cases where the breathing of the patient has been seriously impaired or stopped entirely and

Talbott for

where there still remains a slight heart action. Its motive power is an oxygen cylinder containing this gas, which will supply a 60 per cent mixture of air and oxygen to the patient for forty minutes. It has a great advantage over artificial respiration by hand in that it forces larger amounts of oxygenated air into the lungs than it is cossible by ordinary methods of artincial respiration, and the work can be kept up longer.-Philadelphia Press.

Land Tilled.

The department of agriculture estimates that there are 1,140,000,000 acres of tillable land in the United States and that only 27 per cent of this in might add that of the 27 per cent a tually cultivated comparatively few acres are handled in such a way as to show anything like their maximum pro duction.

Here is food for the pessimist. Th man who fears that the country ipearing actual exhaustion may find cheer in the thought that little more than a quarter of the available agricul tural land is being made productive Supply inevitably meets demand, and as the demand for agricultural product increases the supply will be enlarged by the development of regions which have not been touched by the plow-Cleveland Plain Dealer.

MRS. ABIGAIL SCOTT DUNIWAY

ISSUES AN OPEN LETTER

TO THE PUBLIC

It has been brought to my attention that the Anti-Saloon League, fol-

lowing the same tactics it has followed in every campaign heretofore, is

trying to besmirch this organization and to carry on a victous campaign of

untruths. No name seems to be too good to be dragged into the mud by

them. I have rehable information that if statement has been made to the

Anti Saloon League and to the Committee of One Hundred by Mrs. Cora

that she was brought into this work by me under the impression that it

was a Women's Suffrage movement, and her duties would be those of a

physician while I made speeches throughout the state. I also understand

that Mrs. Talbott makes the statement that funds have been collected with-

out authority, and in some way the Brewers' Association has been collect-

ing these funds. These two statements are absolutely untrue. The collec-

tion of funds was authorized by me as president, and the secretary was

ordered to have a letter sent out in connection with this work. I under-

stand that Mrs. Talbott, in this purported letter, in the hands of the Anti-

Saloon League and the Committee of One Hundred, states that she ob-

jected to the raising of funds under her signature as secretary. How did

the good lady think the work of this league was to be carried ou? Why did

she think Mr. Bortzmeyer, cashier of the Scandinavian American Bank, was

appointed treasurer of this league? Did she think we would ask the brew-

ers to put up the money surreptitiously? If so, she reckoned without her

host. I have always fought in the open, and now, in my 80th year, and

probably in my last campaign, I do not intend to change the principles I

have always fought for, nor depart from my honesty of purpose in advo-

cacy of equal rights for all the people-by no means excluding women, for

whose interests I have spent my life to obtain the ballot. My chief con-

cern in their behalf has always been to secure for them their economic in-

dependence, as married mothers within the home, which alone will enable

any woman to quit the business of marrying mebruates or raising drunkards.

all those who have donated have received a letter acknowledging receipt

thereof. Any one so desiring may inquire from our treasurer as to whether

the money has been put in his hands, and I am quite sure he will advise

them of receipt of their donation. If there is any one who has paid their

money into this organization under misapprehension as donation for carry-

ment when she went to the Portland Hotel, engaged the dining room for

our first luncheon for organization and arranged for the payment of this

luncheon, and went so far as to get speakers to express their views against

found out that she had gone to the Brewers' Association and told them she

could be of good service to them in connection with this league, and asked

and received a salary from the Brewers' Association on the ground that she

was putting in her time and needed the money. On the 26th of August a

meeting was held between Mrs. Talbott and myself for the purpose of get-

ting matters straightened out before starting the general organization. At

this meeting a statement was signed by myself as president and Mrs. Tal-

bott as secretary that the two letters sent out by myself, as well as the let-

ter sent out by the publicity department, were approved. This statement

ended with the sentence: "After discussing generally the affairs of the

league, the officers ratified all work that had been done up to date by the

toiled and worked for the people of my state, and I am willing to leave it to

the public to decide as to whether I would lend myself in any way to any

organization or any act that could be construed as anything but honorable.

to say that, if the occasion arises and I deem it necessary to go further into

this matter, I will be glad to publish some additional facts in these same

papers not necessary to publish now, and will meet the conditions as they

arise. If the Anti-Saloon League, by its paid foreign agitators or Commit-

tee of One Hundred, think they can be foul this issue by trying to drag into

the mud my name or others, they are very much mystaken. I expect to

carry this work on to the conclusion of this campaign, and men allow the

people to judge as to whether we will control our own affairs in the State

of Oregon or allow the paid agitators of the East to show us what to do.

Abigail Scott Duniway

Every one in this state knows Mrs. Duniway and her family. I wish further

I have lived in this state for 60 years, during all of which time I have

publicity bureau and officers of the association.

The real break between Mrs. Talboit and myself was caused when I

It is indeed strange that Mrs. Taibott thought this was a Suffrage move-

ing on this work, this league will be only too glad to refund it.

The moneys collected are in the hands of Treasurer Bortzmeyer, and

mer secretary of the Taxpavers' and Wave Farners' League
