William Sproule

On the Employment of the Employer

On the Employment of the Employer

The employment of the employer is a phase of the labor problem not so well exploited as the employment of the employer but is equally as important to the prespect of the employer but is equally as important to the prespect of the employer was never known to go on a strike nor to ask for a reduction in hours yet the trend of our legislatures has been to discourage his activities. Mr. Wm. Sproule, President of the Southern Pacific Company, when asked to discuss employment from the standpoint of the employer, said in particular to the standpoint of the employer, said in particular to the confide hourly or daily, weekly or monthly, wage. It is thought of chiefly as relating to those engaged in the humbler duties of life. The facts run quite to the contrary. It is the employer who is first out of employment. As a natural sequence he is followed by the employer who next finds himself out of work. Unemployment begins only when the employer himself begins to be unemployed, employees have abundant employment and his energies are profitably employed, employees have abundant employment and they also prosper. But why is this period of unemployment? It is because all business is bewildered and uncertain. It does not know whether it may proceed in safety. It does not know with what snares its path may be laid. This condition began with this country today is that every business which has been developed by the genius of the American people has become the object of unforceseen sitack from some quarter or feels the threat or danger of attack. Our laws, which the men who drew the laws and the mes who interpret those laws cannot themselves define with any pracision. Even when they endeavor to expound those laws they make them more obscure and mystifying than before.

There is nothing more distressing to an employer of labor than to turn away good men who desire to do good work; but until all wake up to the

ed to the art of killing men."

Lace that is too delicate to be washed in the usual way can be cleaned in

some good soap and allow, the lace to remain in it for several hours at least, asionally. A wide mouthed bottle is most convenient to bandle. When the water out of the bottle and keep adding clean water until the soap has all handle the lace at all; shaking the bottle will rinse it thoroughly.

by the modern tourist who wishes to see the remains of the ancient temples and amphitheater and the mighty mole, which still jell of the ancient glories of Putsoil.

Near by, too, is the volcanic field of Near by, too, is the voicanic field of Solfatara, not a mountain, but a flat plain, the crater of a low voicano, into which one can thrust his cans in many piaces and find smoke and sulphurous vapor issuing from the hole as he withdraws it. Probably there are few more dreary or disreputable places in Italy than this modern suburb of Naples. It has not the ragged picturesqueness which somewhat redeems the worst alums of Naples, but is a bottle that has been covered with a piece of soft flannel, and do not remove it until it is dry. If it is 100 a large cushion. First cover the cushion with a heavy towel, then pin the to dry. It is better not to use steel pins on account of the danger from new .- Youth's Companion.

Famous Temple and Statue.

Since about the year 752 the grand eremony of Kaigen, or "opening the piritual eye of the statue," has been brated but five times at the temple only known as the Daibutsu of Nara, at Tokyo. The original statue has suffered grievously since 752. Once, in 855, the head dropped off. ice then It has suffered twice from fire, and upon each occasion the head was destroyed. The statue in its sitting posture measures fifty-three and a domain of mechanics," said he, "that half feet, the length of the face being sixteen feet. The two Bodhisativas fanking the Daibutsu are as high as thirty feet. The temple is 188 feet in frontage and 166 feet in depth and is known as the largest wooden building in Japan, though it is much smaller than the original, built 1,160 years ago. It was not built to protect the statue of these finders weighs 109 pounds, but they must be mechanically exact and "golden eyes," is, as a jarra, a tremental transfer of heaving mides and a submarine has a great advantage twin brother of Louis XIV. and Count Matthioli, secretary of state to Charles this beautiful. The last two may be termed the favories.

Again we note that the fur seal as a submarine has a great advantage twin brother of Louis XIV. and Count Matthioli, secretary of state to Charles the beautiful. The last two may be termed the favories.

she murmured. "You shouldn't let your arms 'compass' me." "I know a preacher who is a joiner," he suggested. And "joiner," he suggested. And they rushed off for the license.-Building

Moral "Risks." It is pointed out by a modern thinker that there is no such thing as a moral risk, for when we talk about a "risk" we mean that there is a possibility. but not a certainty, that harm will resuit. A boy takes a physical risk when he goes skating on that part of the river where the ice is thin. He may fall through and injure his health or lose his life. But when we venture on thin ice in our moral life there is no risk in the matter at all. There is aswe start in that direction. No one can do anything which he knows involves possible moral danger without the of definitely passing beyond the line of mere danger into positive injury to his

Rapid Pie Making. The fastest machine devised for making ples is operated by a foreman and six assistants and will turn out 1,800 ples an hour, according to the World's Work. The machine is provided with eighteen revolving pie holders which move around an oblong table or platform; two crust rollers, one for the lower and the other for the upper crust; a set of four automatic moist-

ening brushes and a pie trimming wheel. The six operators of the ma-chine place the crusts, fill the pies and remove them from the table when the operation of moistening and trimming has been automatically completed. A "Brown never spends a cent for smaller machine, the working principle of which is similar, except that the table is round instead of oblong, will turn out 600 ples an hour when op "Rides on passes, ch?"
"Oh. no. Three years ago he was bloked in the face by a horse."

Henry Thomas Buckle's thoughts and conversation were always on a high level. Once he remarked: 'Men and women range them into three classes or orders of int gence. You can tell the lowest class by their habit of always talking about

His bles.

He-Often when I look up at the stars in the firmament I cannot help thinking how small, how insignificant, I am, after all. fibe-Gracious! "Now he has a horse scar of his own."-St. Louis Post-Dispatch.

Cernish and Squab Fig.

There are tew, if any, conger esis in American waters; ther are to some people a most unpleasant looking fish. Cornwall, England, esteems them highly and makes them into pie with much cream and paraley. Cornwall, Mrs. Florence Coaig Albrecht explains in a National Geographic society bulletin, makes any number of things into pie and calls the product invariably "squab pie," though all things but squabs are among the materials, "Squab pie" gave that to the following Cornish story repeated by the weller:

"The devil came one day to the banks of the Tamar, the rippling river

"The devil came one day to the banks of the Tamar, the rippling river that divides Devon and Cornwall, and looked over at the rocky land beyond. His majesty considered the swift current and shook his head. 'No!' be said finally. 'No, that's no place for me! Every one who goes there is turned into a saint and everything size into squab pic. I'm fit for beither one nor the other!' And he stayed in Devos."

The Duke of Wellington, of course, never said "Up, guards, and at 'em!" at Waterioo, but is it generally known how near he came to faying it? Bir Herbert Maxwell in his blography of Herbert Maxwell in his blography of the duke points out what is the prob-able origin of the pleasing legend. Late on the afternoon of that memo-rable 18th of June the First and Sec "There is nothing more distressing to an employer of labor than to turn away good men who desire to do good work; but until all wake up to the fact that unless the employer is prosperous the employer is failing in property, we will have little improvement. When we have learned the leason that is this nation we are simply a big industrial family in which we all prosper together or we do not prosper at all, we will then have promise of relief from the misunderstandings and cajolements which increase unsemployment and put away the dinner pail of the working man empty in the shelf in the impoverished home. I urge the restoration of conditions the shelf in the impoverished home. I urge the restoration of conditions the fact that American men of business are the pears of any in the world. I urge that the American workingman cannot be prosperous unless the American men of business prosper. I urge that the public that thus "stood up" and interest in transportation is that it shall be prosperous in order that it may be a successful and energetic aid to all the business it is designed to serve."

Late on the aftermoon of that memorable cannot business of the turn in proper distributions of the Third chase seurs were forement in the attack on Mount St. Jean. They had resched a crossroad unaware that fritish busines according to orders to remain prope were lying behind the wayside banks according to orders to remain prope when under fire, but not prope were lying behind the wayside banks according to orders to remain prope when under fire, but not prope were lying behind the wayside banks according to orders to remain prope were lying behind the wayside banks according to orders to remain prope were lying behind the wayside banks according to orders to remain prope were lying behind the wayside banks according to orders to remain prope were lying behind the wayside banks according to orders to remain prope were lying behind the wayside banks according to orders to remain prope were lying behind the wayside banks according

Thick and Thin Shells.

There are several kinds of high explosive shells, which have been designed for various purposes. For instance, there are the shells the case of which is very thin, so that their capacity for containing explosive may be increased. These explode instantly at the elightest contact and are used as mines, e. in Opening Volcanose With Cares.
Sailing across the bay of Naples, past the spot where the notable city of the present day is situated, our travelers came to Putcoll, or Possuoll, as it is now called, at present a decontact and are used as mines, or, in other words, they cause damage not by the impact of their mass but by the by the impact of their mass but by the florceness of the explosion. Another kind of explosive shell is made by in-creasing the thickness of the steel case and reducing the charge of explosive. The explosion of this missile is calcu-lated to take place a little after contact. This type is used for the destruc-tion of solid defenses, like walls, earth-en works, etc., as the thickness of the case and the slowness of explosion per-mit them to penetrate the fabric before exploding.—London Standard.

The Man in the Iron Mack.
The Bustille, whose fall July 14, 1749, marked the birth of French liberty, was built in 1309 to defend Paris against the English. It is as a state the worst slyms of Naples, but is a squalid, unwholesoms fown of the worst type.—Christian Herald. prison, however, that the grim fortres is remembered and chiefly on account of the mystery of one romantic prison or, the "Man in the Iron Mask," who er, the "Man In the Iron Mask," who was "interned" there in 1679 and died in 1703. As to who the prisoner actually was scarcely two authorities agree, but among the almost innumerable "risimants" have figured the Duc de Vermandols, son of Louis XIV.; the Duc de Beaufort, a supposed son of Anne of Austria by the Duke of Buckingham; a twin brother of Louis XIV, and Count Matthioli, secretary of state to Charles III. The last two may be termed the favortices. He was talking about the extreme exactness of range finders for big guns. "I know of no other thing in the wide domain of mechanics," said he, "that is worked out with so great care as them wants for the said be."

"golden eyes," is, as a larva, a tremen-ious gobbler of plant lice, it thinks nothing of devouring 100 of them, one nothing of devouring 100 of them, one after another, at a meal. Thus insects themselves do much to keep the numbers of other insects down. But not even with their aid nor with all our ingenuity in devising methods of destruction could we maintain a successful fight against injurious bugs were it not for the help given by birds. Wouldn't Se Sullied.

Lord Kitchener, celebrated for his stern and exacting manner, met his match on one occasion and proved the fine quality of his nature by acknowl-

A Fexy Reply.

One of the most caustic replies ever made during an election campaign was that of Fox when he called at a shop during one of his candidatures. The shopman happened to be a rabbl opponent. Taking hold of a piece of rope, he said satassity: "Vote for you! I'd same hap you with this core." "Very interesting," remarked Fox blandly, examining the cord, "A fam-ily relic, I presume,"—London Mail

with his usual biuntness.

The Fur Seal In Many Ways Resembles an Undersea Boat.

ITS HABITS IN THE WATER.

though It Can Swim Only When Submerged and Must Rice to the Surface Every Few Minutes, it is a

We have come to regard the souring batross or the condor as the proto pe of the aeroplane. When we look r a natural model for the automarine of find it well made in the body of the

the fur seni is not fitted for awimming on the surface; it only rises there to surrey, to breathe and to sleep. It ever attempts to swim with head bove water on any course, no matter head down and with its powerful auterior disperse to the depth of five or tan feet, then ahead on that level. Thus subsperged the body of the sanightes brough the water as swiftly as a swallour page. gow short. It rises when undisturbed for not alarmed, looks about with head put alarmed, looks about with head put apouts sometimes got choked up, and neck well stretched up above the so the long handle of the spoon with

hen traveling no one has any definite numberize, but the best consensus of inlon gives it a rise at infervals of every three or four minutes to breathe that is, a pause of less than two or three seconds, with barely more than three seconds, with barely more than its nose and eyes above the surface, for exhalation and renewed inhalation —when down goes the trim body to

-when down goes the trim body to speed shead again.

When our submarines were first brough; out a trip of more than 300 miles from base was the utmost limit of their cruising. Today they have been so perfected that they can cruise asfely more than 3,000 miles from that base. Therefore in this connection it is interesting to know that the fur seal makes a submarine journey in the north Pacific ocean of more than 5,000 miles from its base on the Pribliof is miles from its base on the Pribliof is-lands, in Bering sea, and then returns.

An animal which can not only make such an extended journey, but can steer its course over an uncharted waste from point to point, month by month, with positive regularity and in month, with positive regularity and in perfect time, must be a fine type of swimming machine, and it is.

inbiance between the cigar shaped the fur seal. As we view them interni-ty, this resemblance is complete. They are both driven ahead by feethering screws, and they are both kept on the ievel of their submerged course at a given distance below the surface by

Then we observe that the periscope, to which the submaripe craft owes all of its efficiency, is duplicated exactly by the seal's nose and ayes and which are all that it ever lifts above the surface when startled and is flight of

of hearing under sea, for we know that the whirring of a propeller's acrey will drive all the scale away for miles around a steamer. We know that because some of the early pelagic sealing vessels were fitted with small auxiliary acrews, and these, when put into pie, had to be removed.

With preference to the powers of destruction, of course our fur seal boat has no torpedo tubes, but it cap and does "shoot its mouth off" at fish with a deadly certainty.

In this connection it is interesting to note that seals do not catch fish by oursuit of them—not at all. They

ports that seals do not catch fish by pursuit of them—not at all. They shoot down from above upon the backs or up from below to strike at the belies of their funy prey.

How fast these phocine submarines can speed up under the stimulus of excitement or fear no one knows. But it is well known when a versal is com-

is the well known when a vessel is coming down before a gale of wind from
the talands, logging fourteen to sixteen
knots, that a bery of fur seals will often follow the ship for hours and repeatedly swim by it, swim around it
and then renew the chase and circling
of it.—Henry W. Elliott in New York
Times.

Why He Missed Her.
