partment of Agriculture. The seed should be free from noxious weed seeds and not infested by destructive plant diseases. It should be clean (Chief of Police) in cities of over plump and heavy. If there is doubt 5.000 population, according to the about what variety produces the best yields in a given locality, the grower (Assistant Registrars) in commun- should consult his county agent ities having a population of less than State Agricultural College, or write 5,000 according to the 1910 census, to the United States Department of Ariculture, Washington D. C.

Home-grown wheat should be used

USE THE ROUND-UP | for seed wherever possible. The best seed to get is that of an adapted variety which has been grown contingon state Liberty Loan headquarters uously in the locality for some time. provided it is pure. The idea that turing the Fourth Loan campaign varieties "run out" if grown long in before the crowds at the ninth an- one section, is only an expression for the fact that they are allowed to become mixed and weedy and disease infected. Changing the kind of wheat grown should be done only for the purpose of getting a proved better variety. It is often desirable to do this provided it is demonstrated beyond question that the new variety is better for that locality.

So-called "new" varieties, extravagantly advertised at fancy prices Our old friend Foch may feel some their show to advertising the Fourth should be disregarded completely State experiment stations or other The directors, having already authorities for the several district. within a state or region are the ones which should be grown. In Kansas or example, the Eaured, an improved strain of Crimean wheat is commonly grown in place of the Turkey and Kharkov. The introduction of them hard red winter wheats into the Co lumbia basin of Oregon and Washing ton, and elsewhere in the Pacific northwest, has increased yield and

quality of the wheat produced. Poorer varieties are being displaced rap idly. The best way to be sure that the seed wheat is free from mixture with other varieties and also from weeds and diseases is to inspect the growing field. Each farmer should do this in his own fields and neigh borhood. When his own variety is not well adapted or otherwise of good quality, he should inspect fields of adapted varieties grown by some of his neighbors and arrange to obtain seed form them after thrash

ing. In many instances he can ar range to have special care given to this field at thrashing time in order to prevent mixture. Such care is especially desirable this year, when the supply of seed wheat retained on

ATOR APPEARS AT LIBERTY THEATRE WITH NEW

ond 40; first, 16.

WARDROBE Hailed by women as the most

beautiful example of their sex, Julian Eltinge, the famous feminine impersonator, will be seen at the Liberty Theatre on next Wednesday. This is his initial Paramount appearance, him by Carolyn Wells and Gelett Burgees. For a number of years Mr Eltinge has made a sensation on the stage by the number and gorgeousness of his gowns and it is said that in his first photodramatic production he introduces an entirely new ward robe of unusual variety and style.

Julian Eltinge, the clover feminine impersonator, who for the past few ears has been the sensation of the theatrical world, had many strange and amusing experiences in making his first photoplay which he made for Faramount. This is "The Countess Charming," written by Carolyn Wells and Gelett Burgess, "The Countess Charming" will be shown at the Liberty Theatre on next Wednesday.

Mr. Eltinge, being accustomed to the shelter of the theatre, at first could not be induced to walk out in the open air in broad daylight clad in a woman's evening gown. The first day in the "set," Donald Crisp, the director, was waiting and Mr. Eltinge had been notified that he was to wear a ball gown.

The dressing room was some two hundred feet from the portion of the studio where the set was built. Mr Crisp called him to come over. Eltinge stuck a carefully coiffed head out of the dressing room window, removed a pipe from his mouth and said: "Not on your life. I wouldn't walk across that place in this get-up for a million dollars."

Finally, however, after much arguing, Mr. Eitinge consented to appear but threw a heavy drassing gown over his costume. He then insisted that his set he boxed in so that his first day's performance would be oucealed from prying eyes

But, after the novelty wore off it was nothing to see the star walking carelessly around the studio, pipe in mouth and dainty skirts wrapped high around him, calling on some of the other Paramount stars or watch ing them work.

The shock was terrific at first, but now even the primmest ingenue has recovered and Mr. Eltinge, familiarly known as "Bill," bids fair to become one of the most popular members of the studio

which they recently purchased from a large Chicago concern. A most interesting demonstration was made showing AMBU, this instrument, in action attached to a car in the gar-AMBU as its indicating arrow slowly moved this way or that showing on the dial certain conditions normal or the location of trouble or faults. in the electric system on the car. No doubt many would say that it was impossible for any device to automatically indicate the seat of trouble, but they said of the airplane and the submarine not possibleyet they are flying in the air and sailing under the sea.

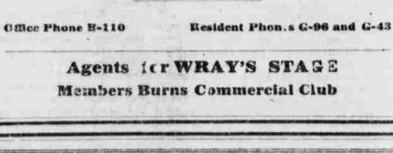

This invention and its remarkable ability was described and discussed. in the leading periodicals of the country.

The motorists of this section are singularly fortunate in having a garage progressive enough to appreciate the advantage of owning such an instrument and they should show their appreciation in a substantial way. The garage plans to charge a nominal fee of \$2.00 for a test of the entire electrical equipment of a carwhich will probably indicte the begin ning of some trouble which can be quickly corrected and save a big expense later. AMBU not only tells the location and kind of trouble but also how to repair it.

So our car owners need not lay up their cars or go to the trouble and expense of sending parts back to the makers of the electrical equipment. It is said that serious derangements of electric starting and lightserve can be given by families who feel that I am competent to fill it repaired in thirty minutes through
