A complete line of Folger's Spices in 4 ounce cans, going at 3 for 50c

Cudahy's Tar Soap large bars 3 for 25c

Everything in the store going at a big reduction

**ESSENTIAL REQUIRMENTS IN A SILO**

First—The walls should be air-tight. The lumber should be well matched. No large, loose knots should be permitted. If air gets into the silo, the silage will spoil instead of ferment. The doors must fit closely into the frame.

Second—The inside wall must be smooth and also must be vertical or plumb so that the silage will settle uniformly all the way down. There should be no large cracks or corners where silage can settle and spoil. Spoiled silage will cause bad odors. Silage that has developed a green or pink mold must not be fed.

Third—Protect against freezing. The material of which the silo is built should be a non-conductor of heat and cold so far as possible. Wood is probably the only readily available and cheap material possessing these qualities. During the process of fermentation, the warmth generated in the silo raises the temperature to 100 or 125 degrees. It is necessary to retain this temperature. If the silo is built of a material that readily conducts heat and cold, this warmth will pass out through the walls and the silage will not develop properly. Silage will not readily freeze in a silo built of wood even in the severest kind of weather. Many users report that their silos have stood in temperatures of 35 degrees below zero without freezing.

Fourth—Be sure to make the silo high enough. The height of the silo should be nearly three times its diameter. Thus the silage will settle by its own weight and pack down closely and tightly. By this process the air will be expelled and the contents will be thoroughly cured. Really, the deeper the silo the better. Some of the best silos now in use are three feet high for every foot in diameter. A tall, narrow silo will hold more silage than a low, wide one, as the silage will pack down much more tightly.

Fifth—Build the walls tight enough. When the silo is filled to the top, the pressure on the lower part of the structure is very heavy, and unless the staves are tightly and securely bound the pressure from above will cause the walls to break. The silo must be firmly fastened to the foundation.

A word to the wise is sufficient. To the fool it is one too many.

**PROPER FEED DECREASES LOSSES IN YOUNG POULTS**

Improper feeding, combined with close confinement, has been the cause of many failures in turkey raising. When on free range the poult is busy most of the day searching for feed. Here there is no overfeeding and lack of exercise, such as the poult is often subjected to by those ignorant of their wants. If the range is plentifully supplied with green feed, grasshoppers, and other insects, and if the weather is favorable, the best plan is to allow the poult to feed themselves. It is usually advisable, however, to have them come home at night, and if driven up and fed at a certain place every night they will soon learn to come up themselves.

When, on account of rainy weather or unfavorable range conditions, it is advisable to raise the poult by the coop method, more care must be given to their feeding.

Successful turkey raisers use many different kinds of feed. Some suggested by the United States Department of Agriculture poultry specialists follow:

Hard-boiled egg chopped fine and cornbread crumbs for the first week, and then whole wheat and hulled oats; stale bread, soaked in milk and squeezed dry, for the first few days, and then common chick feed; clabbered milk seasoned with a little salt and pepper, corn-bread crumbs; equal parts "pinhead" oats, whole wheat, and cracked corn; cracked wheat; corn meal and wheat bran mixed in the proportion of 3 to 1 and baked into bread; and bran or middlings one-half, cracked Egyptian corn one-quarter, wheat and hulled oats one-quarter.

In addition to the above, skim milk and buttermilk are quite often fed, with excellent results. A good plan is to keep the milk in front of the poult during the morning and water during the afternoon. If grit and green feed can not be picked up outside the coop, they must be provided in some other way. Chopped onion tops, lettuce leaves, dandelion leaves, and alfalfa make excellent green feed. Grit can be furnished in the form of coarse sand.

A man can always dictate to his typewriter, but seldom to his wife. You can call some people hard names without insulting them though you may give deadly offense. The truth is never an insult.

**CHIEF ENGINEER GAINS 30 POUNDS**

**Had Not Been Able To Work For Five Years—Is Back At Old Job Since Taking Tanlac**

"I had not been able to work for five years before I started taking Tanlac but now I am not only back on the job, but have gained thirty pounds in weight," said G. F. Henry, 2560 Fifth avenue, West Seattle, Wash., chief engineer of the tugboat 'Wallowa.'

"Five years ago," continued Mr. Henry, "I was compelled to give up my job as chief engineer of the tugboat 'Wallowa,' as I was almost a physical wreck. My stomach was in terrible condition and I suffered from indigestion the worst sort. While my appetite was very poor, and I ate but very little, even the little I did manage to eat would sour, I would

bloat up with gas and have intense cramping pains in the pit of my stomach. My kidneys were in bad condition and I suffered with such pains in the small of my back it felt like it was breaking in two all the time and the muscles seemed to draw in knots. The vibration of the boat would cause my back to pain me so I could hardly stand it and I finally just had to quit work. My head ached nearly all the time so bad I could hardly see, and at times I would become so dizzy I could hardly keep from falling. I was extremely nervous and this together with worry over my condition, kept me from sleeping, and I would be awake all night long nearly every night and always got up in the morning feeling worse than when I went to bed. I was in such a badly run-down condition I was barely able to get around at all and had lost weight until I was scarcely more than a frame. "I had tried so many different treatments and medicines without getting any benefit I had just about given up hope of ever getting well, but as I had heard so much about

the good Tanlac was doing others, and as several of my friends wanted me to take it, I decided to give it a trial. Well, sir, I began to get better almost as soon as I started taking it, and as I continued taking it I continued to improve until today I am a well man. I have a splendid appetite and eat just anything I want without suffering any bad after effects whatever. My kidneys are in splendid condition and the pains in my back are all gone, I never have a headache or become dizzy any more and can sleep as sound as a log all night long every night and always get up feeling rested and full of life. Tanlac has surely put me on my feet again and I am back at my old job on the 'Wallowa,' feeling just like a new man and can do my work with the greatest ease."

Tanlac is sold in Burns, by Reed and in Crane by Crane Mercantile Co. —Adv.

It was really unkind of our office devil to suggest that some men prefer to go to hell because they know they

can't get a drink in heaven. Trouble with these political planks is that there is too much politics and too many planks. One can't take the time to read them and still earn three meals a day.

**Save Your Eyes**

Eye strain cause: headaches, nervousness and other troubles. I fit glasses accurately and scientifically.

All Work Guaranteed. MAURICE SCHWARTZ Optometrist Office with Dr. B. F. Smith

MR. MURAKI FROM JAPAN—

orders shiploads of chemicals, great quantities of wool, lumber, print paper, flour, machinery, garments and canned goods from Oregon.

For Oregon products are so good their fame extends to the far-away Orient.

Associated Industries of Oregon

**OUR RELIABLE PLUMBING**

Consider the egotism we adjective our heading with.

**REAL SERVICEABLE PLUMBING**

is something you seldom find because usually a patch isn't nearly as good as a confident mending or a new part.

**WE WILL NOT PATCH UNLESS**

we know that it is the best service we can give you. We get to the bottom of the trouble and repair it accordingly.

CALL ON US WHEN YOU NEED WORK IN OUR DIRECTION DONE QUICKLY AND PERMANENTLY.
