

FIGHT LIKE APACHES

Philippine War Methods Employed Against Americans.

Troops Shot Down by Natives Under Cover of Attack Even the Soldiers Caring for the Wounded.

In their fighting tactics the Filipino insurgents closely resemble the blood-thirsty Apaches of this country. They rarely give open battle, unless ordered, preferring to stalk their human game and shoot it down from an over-cover. American pickets are dressed upon in the dusk of evening or early morning from clumps of scrubby trees into which the insurgents stealthily crawl and lie concealed for hours waiting for a shot. They hide themselves behind tree trunks and in the tall grass, and wriggle about like eels, firing at some straggler, and then gliding noiselessly off to a new shelter before a return shot can be made. Hospital parties sent out from the American camps to look after the wounded are not safe from attack, and when allowed under a flag-of-truce pact, to pick up their own dead and wounded, the insurgents frequently take advantage of the opportunity to open fire on the Americans.

The constant skirmishing in which they have taken part throughout the period of active operations has brought about a high degree of perfection as marksmen, while the Americans, again, are unable to handle a rifle, and are better acquainted with bows and arrows. The Filipino much prefers an intermittent and desultory conflict, in which the Americans necessarily come out into the open, while the natives remain in ambush in the thick brush. The American marksmen have to be satisfied if they can hit three-parts-fifths in the long grass, creeping up to the fringe of the woods from which the natives are dislodged, only to take refuge under more remote cover. Even the packs and promenade of Manila are not safe from the fire of stray Filipinos, and repeated attempts have been made in such places as the now denuded botanical gardens to assassinate American officers. Here the trees have been stripped of their foliage, which lies about in heaps, and affords capital shelter for these untutored natives on murder intent.

It was this condition of affairs, coupled with the persistence of the insurgents in refusing to respect military control by the Americans, that led to the first battle at Manila. After the natives had been repeatedly warned against attacking the American pickets, and after they had ignored the challenges of the sentries, one of the latter fired upon some natives who persisted in crossing the forbidden line. The natives replied with a heavy missile, causing the sentry to be thrown to the ground. This began the battle of Manila, on the night of Saturday, February 4. It was resumed at daybreak on Sunday morning, and by the time it ended over six hundred lay dead on the field. The American losses amounted to between 50 and 60 killed and 200 wounded.

During the Spanish regime, tons upon tons of Spanish shells were accumulated and lodged at various spots around Manila—3,000,000 bags in all—with the object of throwing lines round the city. Much of this material has been carried by the insurgents and adapted to their own purposes as a shelter for the tumble-down buildings occupied by them as barracks.

A REINCARNATED DOG.

Towner Hadn't Lost His Human Traits in the Process of Changing.

"You can't tell me there is nothing in the theory of reincarnation," remarked a traveling man, "for I know there is. I was down in Florida recently, and in St. Augustine I saw a snob-dog—an out-and-out snob. His name is Towner, and he is just a common yellow dog—lives in the street and belongs to no one. In the summer when the wealthy northern people are in town he plays with all the middle-class children and dogs, and will greet patronizingly the middle-class men and women who socially engage, and who have been known to eat for several days when a fashionable wedding was on his mind. With the swell dogs of St. Augustine Towner never has any rivals, having no doubt studied the point of being agreeable, but with common dogs he is irritable and defensive. That dog has been human in his time, and I'd give a penny to know who he was."—Indiana Journal.

How to Be Minded.

"I sometimes believe that if I were suddenly to drop through a hole in the earth nobody would care a cent." "Oh, brace up. Don't take such a dismal view of things. It surely isn't as bad as you think. Don't you owe anybody any money?"—Chicago Evening News.

Try Allen's Foot-Ease.

A powder to be shaken into the shoes. At this season your feet feel swollen, hot and sore, and get tired easily. If you have aching feet or tight shoes, try Allen's Foot-Ease. It cools the feet and makes walking easy. Cures swollen and sweating feet, blisters and callous spots. Relieves corns and bunions of all pains and gives rest and comfort. Try it today. Sold by all druggists and shoe stores for 25 cents. Trial package free. Address, Allen S. Olmsted, Le Roy, N. Y.

Above rates subject to change without notice. Round trip tickets and excursion parties at special rates.	

UNCLE SAM'S BIG MORTARS.

They Are Among the Most Terrible Implements of Modern Warfare.

Such Is Death Gulch in Yellowstone Park.

Hundreds of Wild Animals Lose Their Lives in the Poisonous Vapors of the Unhospitable Spot.

In the heart of the Rockies, in North Gulch, a desolate ravine in the deathly corner of the Yellowstone Park, is a natural gas trap. Here hundreds, perhaps thousands, of animals, seeking food, drink or shelter, have been tempted to come, only to drop helplessly to their deaths from a noxious, insupportable, poisonous vapor, where they sink down to add their bones to the fossil records of an interminable list of similar tragedies. Going back to a period long preceding the records of human history, the United States Geological Survey.

This is the conclusion reached by T. A. Jaggar, Jr., Ph. D., who describes Death Gulch in a paper in the Popular Science Monthly. He visited the place in the summer of 1910. The gas is divided into minute squares, and the enemy's ships cross the intersections of imaginary lines the men handling the mortars although they cannot see completely or partially obscured by the enemy. The mortars have a limited range of about 4 1/2 miles, and their tremendous bursting charges are fired from a distance of 10 to 15 miles. They are plugged into any vessel occupying a plotted position upon a chart which is in the possession of the officers equipped with range-finders of delicate precision. The mortars are mounted on a platform of cast-iron, and the entire apparatus is divided into minute squares, and the enemy's ships cross the intersections of imaginary lines the men handling the mortars although they cannot see completely or partially obscured by the enemy. The mortars have a limited range of about 4 1/2 miles, and their tremendous bursting charges are fired from a distance of 10 to 15 miles. They are plugged into any vessel occupying a plotted position upon a chart which is in the possession of the officers equipped with range-finders of delicate precision.

PROLIC OF A TORPEDO BOAT.

Singular Misfortunes of One of Our Fleet in the Attack on Havana.

In the earlier days of the war, while the excitement of the new condition of affairs was still at its height, the commander of the torpedo craft were restless under the monotony of their duties, and sometimes did things that were not ordered by the commander-in-chief. So writes a naval correspondent in the London Standard. He tells us of a particularly dark night the captain of a torpedo boat decided to take the boat to sea, and he proceeded to narrate a pretty lively adventure as a case in point.

One particularly dark night the captain of a torpedo boat decided to take the boat to sea, and he proceeded to narrate a pretty lively adventure as a case in point. The boat was almost denied of fresh air, and the crew were almost suffocated by the heat and the smell of the engine. The boat was almost denied of fresh air, and the crew were almost suffocated by the heat and the smell of the engine.

The American Invention Cannot.

There is but one method by which the United States can discharge their national duty and attain the object which is admittedly to be desired.

There is but one method by which the United States can discharge their national duty and attain the object which is admittedly to be desired. The method is to use the power of the press to disseminate the truth and to expose the wrongs of the world. The method is to use the power of the press to disseminate the truth and to expose the wrongs of the world.

Wild Geese As they fly in the Sky.

From one of the flocks that passed over this city lately a single bird had evidently in some way got away from his companions, and he was flying in the sky. The bird was flying in the sky, and he was flying in the sky.

Shake Into Your Shoes.

Allen's Foot-Ease, a powder for the feet. It cures painful, swollen, smarting, nervous feet and instantly takes the sting out of corns and bunions. It's the greatest comfort discovery of the age. Allen's Foot-Ease makes tight or new shoes feel easy. It is a certain cure for sweating, callous and hot, tired, aching feet. Try it today. Sold by all druggists and shoe stores for 25 cents. Trial package free. Address, Allen S. Olmsted, Le Roy, N. Y.

What is Shishito?

A grand old remedy for Coughs, Colds and consumption; used through the world for half a century, has cured innumerable cases of intractable consumption and relieved many in advanced stages. If you are not satisfied with results, we will refund your money. Price 25 cents, 50 cents and \$1.00. Address, Allen S. Olmsted, Le Roy, N. Y.

Rheumatism

is a disease of the blood. Local applications may furnish temporary relief, but to CURE the disease it is necessary to treat it through the blood.

Locomotor Ataxia

is a disease of the nerves. The one successful method of treatment is by a remedy that will restore nutrition to the nerves. Such a remedy is

Dr. Williams' Pink Pills for Pale People

These pills are a specific in cases of Rheumatism, Locomotor Ataxia, Paralysis, and other diseases of the blood and nerves, because they supply the necessary elements to build up the blood and strengthen the nerves. It is in this way that the pills effect so many cures in diseases of apparently widely different character.

Frank Long, who lives near Lenox, Mich., says: "I was first taken with a pain in my back. The physician pronounced my case muscular rheumatism, and I was treated for months. My disease gradually became worse until I thought death would be welcome. I had been advised to try Dr. Williams' Pink Pills for Pale People. I bought a box and started taking them
