> ranks under the general head of verifying the schedules. To get the limits of probability for this purpose for each country in the United States, that is, the maximum and minimum yield and the maximum and minimum price which may be accepted without verification, is the object of an extensive correspondence now being carried on by the Aricultural Division ander the direction of Mr. L. G. Powers, Chief Statistician in charge of that division. Three simple schedules have been prepared and printed on different colored paper in order that they may be readily distinguished one from another. One of them covers ordinary garden vegetables, a second covers fruits, and the third the great staple field crops. These schedules are being mailed to prominent farmers all over the country and in many instances returns have already been received.

If the farming public will continue to cooperate with the heartiness already displayed, this effort will result in a more trustworthy census of farms than has ever been taken. Farmers, as a class, are less able to cooperate than the representatives of any other great industry. Hence the Census Office can do more for them than it can for centralized lines of business, which can and do make their own investigations, and it will do its best to present a full and accurate photograph of this leading occupation. The Director of the Census urges every one interested to aid the work.

P. H. HARTH & SON.
