### OUR PERSONAL COLUMN

People as They Come and Go From Day to Day

W. H. Hampton was a visitor to Ashland Thursday.

Mr. and Mrs. Roy Pool went to Ashland Saturday.

Mrs. Paul Edwards of Siskiyou is visiting in the city.

A. M. Hoskins of Medford was in Grants Pass Friday.

J. G. Turck of this city made a visit to Ashland last week.

Mrs. Kate Edwards of this city is organizing a piano class in Medford.

E. B. Duck, the S. P. fireman, has returned from the hospital at Portland.

Rev. Robt. Leslie and R. M. Eberle went to Ashland Wednesday morning.

E. H. Wise, the Placer merchant, was in town Thursday on a business visit.

Jack Saelling, one of the well-known miners of the Galles district, is in town this week.

O. S. Goodnow, our well known miner, is visiting with his family in Grants Pass this week.

J. T. Tufts is in town this week from Lane county on business connected with the circuit court.

Joseph Russell, the well known stockman of this city, spent a few days in Medford last week on business.

Mrs. C. E. McPherson of Medford is visiting here this week at the home of her parents, Mr. and Mrs. M. T. Utley.

D. B. Grant, ex-mayor of Ashland came down last Wednesday evening to look after mining business in this county.

Jacob Klippel of Holland spent a few days in Medford last week transacting business and visiting with friends.

Willard Denison has resumed his position at the Sugar Pine store, having entirely recovered from his recent illness.

Mrs. Carter of Kirby spent Friday and Saturday in Grants Pass and went to Ashland to spend some time visiting in that city.

Mr. and Mrs. Roy Wilson, Miss Florence Akin, H. W. Foster and A. H. Gannell visited Gold Hill Sunday on a tour of recreation.

Earl Fletcher, the 17-year old son of J. M. Fletcher, the Roseburg grocer, was accidentally killed by a live wire in that city Friday.

Henry Ankeny of Stirling, the well known Jackson county mine owner and politician, was a passenger on Wednesday's train, returning from a visit to Portland.

John Wimer, who has lately been in Grants Pass in the employ of the Hair-Riddle Co., returned on Wednesday to Waldo, where he will engage in mining.

Mrs. M. C. H. Day and two children returned last week from Central Point, where they had been visiting with Mrs. Day's parents, Mr. and Mrs. W. W. Scott.

Mrs. Mary Bailey of Siskiyou county, Cal., arrived here Wednesday evening on her way to Crescent City and is making a brief visit with the family of A. Umphlett.

District Attorney A. E. Beames, the democratic nominee for congressman, made a visit to Portland last week, returning to this city for the circuit term which convened on Monday.

C. R. Cousino, formerly in business in Grants Pass and more lately a resident of Crescent City, is in town this week. For the past two months he has been mining on Rogue river about 10 miles below Grants Pass.

W. B. Emms and family, lately of Minnesota, arrived here Sunday and have already located themselves in a home. They will make their permanent residence here and Mr. Emms will be employed at the Williams Bros. & Kendall's sash and door factory.

Mrs. Florence Brackinridge, daughter of Dr. J. Jennings, left on Tuesday evening for Yaguina by after a week's visit in Grants Pass. Mrs. Brackinridge has lately been traveling in the south and recently visited Mexico, but has more lately been in San Francisco. She will remain at Newport during the greater part of the summer and Dr. and Mrs. Jennings expect to visit with her there during the summer vacation. She will probably spend the greater part of next winter in Grants Pass.

Father M. J. Hickey, formerly of Grants Pass and now of Portland, recently submitted to an operation for cataract in San Francisco, under the direction of Dr. Barkan, an eminent oculist. The operation, which was very delicate, was thoroughly successful and Father Hickey will recover 80 per cent or more of his former splendid sight after a long period of suffering and practical blindness. The operation places the patient under a painful restraint for a subsequent period of 10 to 20 days, during which time he is compelled to remain in a darkened room with his eyes bandaged and as far as possible avoid all muscular effort. Father Hickey is well known in Grants Pass and all Southern Oregon and has many friends and acquaintances who will be glad to hear of his recovery from his late affliction.

H. E. Peck, treasurer of the State Loan Company of Minneapolis, Minn., which company operates extensively in Wisconsin, North and South Dakota and Montana, registered at the Josephine Monday and will be the guest of W. B. Sherman for some time. Mr. Peck will combine business with pleasure before returning east, by shooting one or two of the bear that Mr. Sherman had stalked out for him prior to his arrival. Mr. Peck is a wide awake, conservative business man and is making a careful survey of the business opportunities of the coast with a view to possible future location. Men of brains, capital and business experience will not need to hesitate in investing here and should receive a ready welcome from Oregonians. We can not have too many such business men with us.

### FACTORY IN OPERATION

Williams Bros. & Kendall Commenced Operation This Week.

The sash and door factory of Williams Bros. & Kendall began manufacturing operations this week. Not all of the machinery is in place yet, but enough for the commencement of efficient operation. When fully equipped, this factory will be second in capacity and equipment to only one institution of like character on the coast. They will have more than 30 machines in operation and will be able to turn out an enormous amount of work. They will also handle the lumber yard business formerly done by the S. P. D. & L. Co., and besides these interests they are engaged in the saw mill business. This firm is carrying on one of the most solid and substantial business enterprises of the city, of the kind that produces prosperity and permanent advancement.

### THE LOCAL HAPPENINGS

Brief Notes and Items of Interest and Importance.

Dr. Flanagan, Physician and Dentist.  
Go to Coron for Plumbing.  
Planet Jr. Tools at Cramer Bros.  
M. Clemens, Prescription Druggist.  
Bicycle Repairs at Cramer Bros.  
Garland Stores and Ranges at Cramer Bros.  
Sanford's market delivers meat as soon as ordered.  
Choice cuts of meat always at Sanford's market.  
A splendid line of Royal Charter Oak Ranges at Coron's.  
All the repairs and sundries for bicycles at Cramer Bros.  
Fresh eggs and plump poultry at Sanford's Meat Market.  
Maps of Oregon—vest pocket size—20 cents at the Courier office.  
"Inguito" Photo mailers—three for 5 cents at the Courier office.  
Malleable iron ranges better than Home comforts at Cramer Bros.  
See the stock of split bamboo rods from the factory at Cramer Bros.  
Fish lines, hooks and leaders in all kinds just received at Cramer Bros.  
Live stock, poultry and eggs wanted at Sanford's new market front street.  
Strohle's shoe repairing always please. Take your shoes to him.  
E. D. Weston of Gold Hill is spending a few days in Grants Pass.  
Try Patton's Sun Proof Paint, it is guaranteed and sold by Cramer Bros.  
Miss Myrtle Ireland entertained a few friends at her home on Monday evening, in a delightful party.  
Received this week the latest styles in Diamond, Ruby, Opal and Sapphire rings at Letcher's Jewelry store.  
Boyles & Sherman have from 20 to 30 claims that will run from four to six millions, call at their office and get particulars.  
L. A. Stroble has charge of the shoe making and repairing department at the Lucas harness shop. Take your work to him.  
The Oregon Fire Proof Paint Co. of Grants Pass spend their money home. They don't send their money out of the country then expect you to patronize them.  
Several of the former members of the popular Jessie Shirley troupe are now with the Allen stock company which will be in Grants Pass during the week of May 11.  
Curtis & Co., practical watch makers and jewelers. Dealers in watches, clocks, jewelry and Diamond rings. All repairing first class. Odd Fellows' building.  
Wm. Bybee's dam in Evans creek was recently blown up by parties unknown. Mr. Bybee has offered a reward for information leading to the detention of the perpetrator of the act.  
Ralph Dent, a 10 year old boy of Medford, was accidentally struck on the head by a bat in the hands of a playmate Thursday on the public school grounds of that city. He was rendered insensible and badly hurt but no serious harm resulted.  
A class in embroidery was organized at the last meeting of the Woman's club. The class will meet in the afternoon of the first Monday in each month and the first meeting will be at the home of Mrs. J. D. Fry.  
A free entertainment is to be given this evening (Wednesday), at the Opera house, under the auspices of Josephine lodge, A. O. U. W. Rev. G. H. Osborne will appear in a novel and unique program of illustrated song and story. There will be a stereoscopic, with dissolving views and scenic effects. An address will be given by Hon. W. M. Colvig.  
F. B. Tichenor, president of the Woodman carnival, spent several days in Medford, Ashland and Jacksonville during the past week, in the interests of that event. The valley towns are entering with zest into the spirit of the fair and will lend active assistance in making the carnival an all Southern Oregon affair and the biggest event in the history of the district.  
Col. Milton Weidner and A. B. Condit, president and secretary of the St. Helens and Galles Mining Co., were in town Tuesday, returning from a visit to the property of the company at Galles. They brought in with them a considerable amount of gold, the results of a recent clean-up. The old channel uncovered last winter is producing marvelously and the company is enjoying a very prosperous season.  
A called meeting of the Board of Trade was held in the bank parlors on Friday evening for the purpose of considering a reception to directors of the Oregon & Pacific railway who were expected to arrive on Tuesday evening. After some discussion, it was decided to arrange for an informal reception to be held at the Josephine parlors on Tuesday evening. The gentlemen, however, did not start from San Francisco at the expected time and the reception idea was necessarily postponed.

## Ocean Wave Washer

Something new in Washing Machines operated with a fly wheel and a unique reversible gear. Built good and strong for hard usage and wear.

Our stock of Wash Boards, Wringers and Tubs is complete. Ask to see the Asbestos Sad Iron. Absolutely the best thing on the market.

### CARSON'S FRUIT REPORT

Submitted at Meeting of State Horticultural Board.

A. H. Carson, Commissioner for the third district, Southern Oregon, submitted an important report upon the condition of orchards in that locality and the successful outcome of an experiment of spraying diseased trees with Bordeaux mixture. His report follows:

"Fruit trees of all varieties have wintered in fine condition. There have been no extremes of high or low temperature during the winter season, which was a favorable condition for all kinds of fruits. The blooming period is very late. Almonds, peaches and a few cherries are in bloom now that are usually three to four weeks earlier, while the apple and pear will not bloom for some time yet.

"The prospect for a large crop of all kinds of fruits at this date is very promising, and the late blooming this year is almost sure to carry the fruit past the danger from frost.

"Spraying has been done to a great extent than any former year, as orchard men of all classes now realize that their success, if they grow clean fruit that can be sold in the market, must be sprayed carefully.

"Gasoline power to run spray pumps in this district is increasing rapidly. Fruit men find gasoline power much cheaper than hand labor on the spray pumps, as well as much more effective.

"There are 50 gasoline engines in use in Josephine county.

"About 1250 acres of new orchards were planted in Jackson county the past winter. The apple leading all other varieties of fruit in acreage.

"Quite a large acreage in Douglas county were planted this season, as much as 20 acres to the apple.

"Douglas county has many thousands of acres of peach apple and with in her boundaries, with ideal climatic conditions for the apple, and it is only a question of a short time when her land owners will begin planting the apple on a large scale.

"The apple anthracnose, which in the past has retarded the apple orchards of Josephine and Douglas counties with extinction, I am glad to report, is found to yield readily by spraying with Bordeaux mixture early in the fall, just after apple-gathering. The Kisman Bros.' orchard, six miles west of Grants Pass, which was so badly diseased with anthracnose, or canker, two or three years ago, have eradicated the disease entirely there by spraying with Bordeaux.

"Mr. Rynner, who has a 10-acre apple orchard three miles west of Grants Pass, which, for the past four years, has been badly diseased with anthracnose, failed to eradicate the disease by spraying late in the winter or early spring. At my suggestion he sprayed the diseased trees with Bordeaux mixture, having two rows unsprayed, as a check with the result that at this date on all the trees sprayed last fall with Bordeaux, a new growth appears, while on the two rows left unsprayed, the new anthracnose appears in great abundance.

"This test, alone demonstrates that anthracnose has specific in the use of Bordeaux if applied early in the fall."

### CARSON'S FRUIT REPORT

# Why Do The Best Dressed Men Deal Here?

The best dressed men throughout this locality buy their clothing at this store. Every man who wishes the best comes to us sooner or later. There are several reasons "why."

**HERE IS REASON NO. 1.**

We have the widest showing of up-to-the-latest styles. Different men have different tastes—require different styles to suit their different characteristics—that's where our wide style-range comes in. A man can get from us just the kind of clothing that makes him look his best.

SCHLOSS BROS. & CO., of BALTIMORE, are makers of the "Best Clothing in the World"—we have a splendid assortment of their make of garments, all of which bear this label.

**P. H. HARTH & SON**  
High Grade Clothing and Furnishings  
for GENTLEMEN and BOYS . . .  
Sixth and H Streets Grants Pass, Ore.

## HAIR-RIDDLE HARDWARE Co.

Grants Pass, Oregon.

WE wish to call special attention to our white shirt-waists. We have some very pretty as well as novel ones in the latest styles. The Beau de Soie and China silks are rare bargains. Also our line in undershirts of mercerized sateen are selling fast at the reasonably low prices. Closing out sale of Ladies' and Children's sun bonnets. Do not miss this sale.

**Mrs. J. A. Rehkopf**  
Agent for  
New Idea Patterns, 10c.  
When sent by mail 11c.

### BALLOTING FOR QUEEN

Gold Hill's Candidate in the Lead for Carnival Queen.

Miss Helen Colvig, Jacksonville, . . . 763  
Miss Prue Angle, Medford, . . . 708  
Miss Blakburn, Gold Hill, . . . 504  
Miss Carrie White, Grants Pass, . . . 574  
Miss Essie Hartman, Grants Pass, . . . 608  
Miss Grace Good, Grants Pass, . . . 621  
Miss Lucy George, Ashland, . . . 498  
Miss E. Dowell, Grants Pass, . . . 479

Queen contest is now on—Miss Blakburn of Gold Hill in the lead by six votes over Miss Prue Angle of Medford, while Miss Colvig of Jacksonville is a close third. Miss Grace Good is the leading candidate from Grants Pass with 621 votes while Miss J. E. Hartman is a close second with 608 votes. How will the votes stand by next Saturday? It up to the friends of the candidates to answer. Jacksonville, Medford and Gold Hill will vote early and often in order to win and as shown by the result of the first count, who knows but one of the outside towns will present Grants Pass with the carnival queen?

The committee on arrangements for the carnival are working hard and will leave nothing undone in order to make the carnival a grand success. A handsome banner was stretched across the street from the depot where the north and south bound passengers can read and learn about the greatest street fair and carnival ever given in Southern Oregon. Applications are coming in by the car load and the crowd cheerers expect to have more than 300 candidates for the big initiation on the first day of the carnival.

June 17th, Medford camp is coming down with their camp teams and handsome uniforms and with them will come 25 candidates. Medford camp will come on a special train. Gold Hill will furnish 23 candidates for a new camp, and with them will come their friends and sweethearts who come to take care of them after they have split the wood. Kirby camp will also be in the swim and will furnish 20 candidates. Williams is preparing for a big time here on the 17th, and are buying up all the long horned goats in the county. Oh, candidates, what a time you will have! Medford circle will give a public drill on the 19th. This is the best drilled team in the state.

### ACTIVITY IN BUILDINGS

Many Residences Now Under Way in Grants Pass.

There will be a rush in building matters in Grants Pass this summer and the activity is now just begun. New residences are springing up all over town and a large number of buildings for business occupancy are projected and for some of them definite arrangements are already completed. The Baptist church will be begun as soon as lumber can be obtained. Bids are being solicited for the new school house on Seventh street. C. W. Gray has the foundation laid for a residence in the Moss tract.

R. M. Eberle has commenced the erection of a neat dwelling on G and 4th street.

Geo. S. Calhoun has lumber on the ground for a small dwelling house on Fifth and A street.

J. P. Gahmeyer is building a dwelling on his new location in the Wimer tract on Eighth street.

R. O. McCroskey is building a residence on E street to replace the one destroyed by fire last summer.

Rev. Robt. Leslie and Arthur Conklin are building a cottage on B street for pastor's study and for lodging.

Geo. Hansen will build a two story brick on Front street, between Sixth and Seventh, as soon as brick can be obtained.

S. Hammill, the mill man, has commenced the erection of a residence near J. E. Peterson's, in the railroad addition.

B. I. Plummer has recently completed and is now occupying a dwelling in the Moss tract on the northeastern side of town.

J. W. Baker, of the Grants Pass steam laundry, has purchased the lot on the northeast corner of Fifth and H streets and will build a 2x7-0 one story brick building, for laundry, as soon as material is obtainable.

Besides those mentioned, there are a number of others which are now being built and hardly a day passes but a new house is begun in some part of the town. Building is still being held back by the scarcity of lumber.

### BENEFIT OF CLEAN TOWNS

They Attract Home-seekers and Grow Very Rapidly.

It doesn't cost much and is very little trouble to keep a town clean if the citizens will co-operate and do their share in the matter. And there is no better advertisement for a town. Home-seekers will go to a clean town just as one will go to a clean store to buy his goods.

Of course the schools should be kept clean as an example to the young, and to prevent the lodgment and propagation of disease of any kind the streets and alleys ought to receive more careful attention. The latter especially are too often made the receptacles of all kinds of filth that in summer spreads infection broadcast. In cold weather the nuisance is almost as dangerous. There must of necessity be a deal of mud and slush this winter on all our sidewalks, but if each householder will exercise a little care in keeping the walk in front of his house properly cleaned the exceedingly unpleasant effects of it may be to a large extent overcome. If attention is given this matter, a necessary walk about town would be a pleasure instead of a regret, and sociability would be promoted. Nothing gives more agreeable first impressions of a city or town than the cleanliness of its streets, stores and public places, and it may draw to us many inhabitants and large investments.

**Protection of Street Trees.**

If a tree has been well scraped of the cocoon that contains the eggs, it may be protected from the caterpillars that are allowed to develop on neighboring trees by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since caterpillars suspend themselves by silk fibers of their own spinning and are warded when this suspended from an infected tree by a band of tar or other viscous substance painted around the trunk and renewed from time to time so that it will not get dry. There is no perfect protection, however, since
