

SPRAY Your Orchards NOW

For San Jose Scale and use

Sampson's Concentrated Lime and Sulphur Solution

Scale lives and works all the year round. Don't forget this. As the old scale dies, the new is ready to carry on the destruction of our orchards.

The scale is less vigorous in the fall, and more easily and surely destroyed than in any other season of the year. Therefore now is the best time to attack it and kill it. If you spray now, many a valuable tree will be saved that otherwise, because of the scale, would not retain life enough to start up in the spring.

YOU HAVE MORE TIME NOW—There is less wind to scatter and waste the spray, and make it hard to cover every part. Then, too, you cannot tell what may happen to prevent thorough spraying in the fall. **BUT ABOVE ALL**, the results of FALL SPRAYING are absolutely certain, provided, of course, that you SPRAY with **SAMPSON'S LIME AND SULPHUR SOLUTION**.

These are all "Spray Facts"

We claim no wonderful chemical discovery in this spray, but we do claim most emphatically that

Sampson's Lime and Sulphur Solution always produces satisfactory results, and does no injury. There is no better spray manufactured than Sampson's Lime and Sulphur Solution.

Sampson's Lime and Sulphur Solution is a clear, cherry-colored solution free from sediment. It is guaranteed to test 30 degrees Baume. If you dealers cannot supply you, write to us. **BE SURE YOU USE SAMPSON'S SPRAY.**

Remarkable Fatherhood.

They were talking about a certain famous statesman's remarkable fatherhood. At seventy he had children three, four and five years old.

"I can tell you of fatherhood still more remarkable," said a physician. "There was the historic case of Sir Stephen Fox, to whom, at the age of ninety-nine, a daughter was born. Then there was Joel Vaughan of Cincinnati, who had twenty-seven children, the last being born when he was seventy-nine years old. The late Earl of Leicester was seventy-one when his last son was born. The Earl of Essex was sixty-seven at the birth of his daughter, Lady Beatrice."—Philadelphia Bulletin.

Kodol will without any doubt help anyone who has stomach disorders or stomach trouble. Take Kodol today and continue it for the short time that is necessary to give you complete relief. Kodol is sold by Model Drug Store.

Governors Meet Again.

Invitations to a second meeting in Washington of Governors or their representatives have been sent out by the National Conservation of Resources Commission. The date announced is Tuesday, December 8. At the same time letters are going out announcing for Tuesday, December 1, the first general meeting of the Conservation Commission itself for organization.

The Governors will discuss the work which the National Conservation Commission has been carrying on during the summer and fall. The outcome of this work will be the first through inventory of the Nation's natural resources the Federal government has ever made. On this inventory, the report which President Roosevelt has requested the commission to make to him not later than January 1, will be based.

The governors of more than half the states have appointed commissions and these commissions are now at work along the same lines in their states that the National Commission is following for the whole country. The week beginning December 5 will be a conservation week. The Country-Life Commission will hold a meeting after having completed the first part of its swing around the country. The Southern Commercial Congress, whose chief purpose is the awakening of the people of the 14 Southern states to the value of their natural resources, will be in session on December 7 and 8, and will then merge with the National Rivers and Harbors Congress which will hold its annual meeting December 9 to 11.

Watch Papers.

When thick watches with removable cases were carried it was the custom for watchmakers whenever they cleaned a watch to place in the bottom of the loose case an engraved label with their names and addresses, on which they would write the date of the repair. Frequently these labels were elaborately engraved. Sometimes they contained maxims or verses around the outside. This habit gave rise to the fashion of placing in the cases verses and devices, tokens of friendship or love, sometimes written on paper, but more frequently painted or worked on satin. All these were designated as watch papers irrespective of the material of which they were composed.—Exchange.

"Do" Witt's Little Early Risers, pleasant little pills that are easy to take. Sold by Model Drug Store.

FRUITDALE GRANGE.

The Fruitdale Grange met last Saturday afternoon, at the school house. Among the visitors present were Mr. and Mrs. Alverson, Mrs. Parham and Miss Lawton, from Dimick Grange; Mrs. M. E. Sturtevant of Grants Pass and S. A. Reitz of Fruitdale. The meeting was opened by Worthy Master H. C. Bateham and put in charge of the lecturer.

The current events given in response to the roll call very were interesting. Mrs. E. H. Wise read a very instructive paper on "Raising poultry for profit. The methods advocated in this paper were not only practical, but necessary to successful poultry raising.

Mrs. G. A. Hamilton opened the discussion "Do hens lay as well when confined as when allowed free range?" Mrs. Hamilton handled this subject in a very able manner, after which it was freely discussed by a number of persons. Nearly all agreed that milk was a good food for all kinds of chickens and especially beneficial for laying hens.

Some advocated sweet and others sour milk but as one of the experiment station bulletins stated that sweet milk was more beneficial for poultry than sour, the Fruitdale chickens will drink sweet milk.

The next number was a duet by Mrs. M. E. Sturtevant and Mrs. H. C. Bateham entitled "Sunny Home." This beautiful song was well rendered and enjoyed by all.

Mrs. W. S. Constant then read some interesting extracts from one of the experiment station bulletins on incubators, versus setting hens. According to the experiments described, it was proved that hens hatch a larger per cent of the eggs than incubators do, nevertheless incubators were thought more profitable, as more chickens can be hatched at one time. Early spring chickens always thrive much better than those hatched in hot weather. The time saved in caring for them is also quite an item. Pullets hatched the first of April will usually begin laying early in the fall when most of the old hens are on a vacation and eggs are bringing a good price.

Mrs. Parham gave a very helpful and interesting talk from her experience in raising and caring for chickens. The majority thought that chickens were profitable and we do not know that anyone decided against the "bid-dies" even after H. C. Bateham had read statistics showing that the "Oregon hen" was not profitable. Some of the ladies shook their heads and said they were sure their hens eggs were not counted in when the "census was taken."

The next was a reading by Mrs. Robert Huck entitled "The hens kept a-layin' right along." This poem very plainly showed that from the dawning of creation until the present time the hens had kept a laying right along. S. A. Reitz then sang "Goodnight, Little Girl, Goodnight." Mr. Reitz is an exceptionally fine singer. In response to the hearty encore he sang "Goodbye Sweet Day."

Irrigation and other timely and interesting subjects were then discussed. Mr. and Mrs. E. E. Blanchard's applications, for membership were voted on and accepted. By this time the evening shadows were beginning to fall and all were in a hurry to get home, feed the chickens and gather in the eggs, "because the hens keep a-laying right along." Therefore the remainder of the business was postponed until the next meeting and we adjourned, feeling that a very pleasant and profitable afternoon had been spent.

GRANGE REPORTER.

TEA

Moneyback means that the tea is good and well worth the money.

Can't mean anything else.

Your grocer returns your money if you don't like Schilling's Tea; we pay him.

Beware of Ointments for Catarrh that Contain Mercury

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. "Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and made in Toledo, O., by F. J. Cheney & Co. Testimonials free.

Sold by Druggists. Price 75c per bottle. Take Hall's Family Pills for constipation. 11-6 4t

ROYAL Baking Powder

Absolutely PURE

Insures delicious, healthful food for every home, every day. The only baking powder made from Royal Grape Cream of Tartar—made from grapes.

Safeguards your food against alum and phosphate of lime—harsh mineral acids which are used in cheaply made powders.

GOOD WAY TO GET RID OF BIG FIR STUMP

A farmer who has had much experience in getting rid of fir stumps, tells in a recent issue of the Pacific Homestead of the way he accomplished the best results. Many Courier readers are now clearing preparatory to planting vineyards and orchards so will undoubtedly be interested in what the writer has to say, which is as follows:

"To begin with I will say that any good strong man can get rid of an old fir stump, six or eight feet in diameter, with an outlay of not more than two hours' work and there will not be a root of it left that a plow will touch in plowing the ground where it stood. Now, you must do the work in the months of July, August or September, or, if the stumps are not more than two feet through, the first half of October will do. These statements apply to all stumps that have been cut two years or longer (not green stumps).

"Follow these directions: First put a lot of valueless wood around the stump. If the stump is very large one-half a wagon box full of wood will not be too much. Next lay on the wood a little old straw or green fern or weeds and next cover the who with several inches of dirt including the stump, if the stump is not too high, in which case merely cover the straw or weeds leaving the top of the stump uncovered. In covering with dirt leave a little bit of space uncovered at or near the ground into which insert some kindling wood and then having covered all but the little space, set it on fire. When it has gotten well to burning cover the little space you left for kindling. It will soon become intensely hot under the dirt and, if the fire breaks through put on more dirt. Keep the fire confined; do not let the heat escape and the burning will quickly generate a gas which will penetrate the entire stump far into its roots. It will burn from a few days to two months or even a little longer owing to the size of the stump. A heavy rain will not interfere with the burning as the dirt being hot causes the rain to evaporate as fast as it falls keeping the stump dry.

"By keeping the heat confined as above described the generated gas will burn the roots several feet in the ground.

"I burned a great lot of fir stumps in this way three years ago. Two years ago I burned seventy-five. Last year I burned about thirty. This year I have burned twenty-five. I have plowed right through the ground where all these stumps had stood and in not more than one case out of ten did I strike a root. Several of my neighbors are also burning out stumps this way.

"I haven't the least idea," was the crisp response. "Never saw her in my life, but I know him."—Youth's Companion.

All That Was Necessary.

Two men were standing in a picture gallery commenting on the different artists whose work was exhibited.

"What do you think of Claymore's 'Portrait of Miss Lawrence'?" asked one.

"It's a good deal flattered," said the other.

"Ah, then you've seen her! Who is she?"

"I haven't the least idea," was the crisp response. "Never saw her in my life, but I know him."—Youth's Companion.

Courier sample copy sent free to any address.

"If" and "but" are tiny words, but they can change the color of the sky and make the world seem a wilderness.

"Rastus," said the candidate, "did you ever sell your vote?"
"No, sirree," was the emphatic answer, "but when a man comes aroun' and heps me out a little wif de rent, and also wif de grocery bill, I owes him a little pure friendship, doesn't it?"—Washington Star.

A Common Cold.

We claim that if catching cold could be avoided some of the most dangerous and fatal diseases would never be heard of. A cold often forms a culture bed for germs of infectious diseases. Consumption, pneumonia, diphtheria and scarlet fever, four of the most dangerous and fatal diseases, are of this class. The culture bed formed by the cold favors the development of the germs of these diseases, that would not otherwise find lodgment. There is little danger, however, of any of these diseases being contracted when a good expectorant cough medicine like Chamberlain's Cough Remedy is used. It cleans out these culture beds that favor the development of the germs of these diseases. That is why this remedy has proved so universally successful in preventing pneumonia. It not only cures your cold quick but minimizes the risk of contracting these dangerous diseases. For sale by M. Clements.
