RPM MUZZLES THE SAWMILL IN YOUR MOTOR

A brightly machined piston looks as slick as glass. But see it through a microscope:

That snaggle-toothed saw edge can rip gouges in cylinder walls in a flash. That's why you use motor oil to keep cylinder and piston apart. And that's why you need an oil like "RPM"; one that won't leave bare spots, by crawling away from high engine heat, or draining into the crankcase when the engine's idle. Special compounding makes RPM Motor Oil cling stubbornly to hot or cold metal surfaces. Now, when cars and parts are precious—switch to RPM Motor Oil, and change it every 1000 miles—right on the dot!
