SNAPPY FACTS ABOUT RUBBER

There are two big "unknowns" in trying to anticipate the eventual "balance of power" between natural and synthetic rubber, in the opinion of John L. Collyer, President of the B. F. Goodrich Co. These unknowns are respective production costs and the relative value of these types of rubber in different kinds of products several years hence.

During the manufacture of one variety of synthetic rubber, materials must be kept at a temperature of 100 degrees below zero.

Use of rayon has improved the performance of synthetic truck tires as much as 375 per cent compared with tires made of cotton cord, some industry authorities report.
