Aircraft Output

More airplanes were produced during 1944 by the American aircraft industry than the total of all aircraft of all types produced in the country from 1903 to Pearl Harbor. In the 38 years of its history prior to 1942, the industry produced an estimated 85,000 airplanes of all types, military and commercial. In 1944 a total of 96,369 military airplanes was produced.

Aircraft Engines

production facilities from Jurr, 1940. to June, 1944, exceeded air-frame factory expansion by 10 per cent, indicating the pressing need for increased engine production following Pearl Harbor. The advent of fourmotored bombers and the expanded production of multi-engine types placed a tremendous load on engine production.

Vitamin Loss

While investigating whether glass or tin containers caused the greatest loss of vitamin C in canned vegetables, research workers found that the material used for making the container had no effect on vitamin C but the loss was caused by the air left in the can. The amount of vitamin C lost was in proportion to the amount of headspace left unfilled in the container

Fattening Lambs

One help in putting weight on lambs is to keep sheep and lambs free from parasites, especially nodular worms and stomach worms. Infestation with parasites holds back growth and increases feed costs. Serious losses from parasites can be prevented by providing clean pasture, by the use of phenothiazine, and by taking other precautions.

Bath Banishes Blues

According to etymologists, the English word "bath" comes indirectly from a Greek word meaning "to drive sadness from the mind." Which goes to prove again that the classic Greeks were a modern people and that they knew the full value of bodily cleansing. Bathe frequently and thoroughly, and thus "drive sadness from the mind."

Dustless Duster
