

The Halsey Enterprise
An Independent Newspaper.
PUBLISHED EVERY THURSDAY
W. A. PRIAULX, Publisher

Entered as second-class matter October 3, 1912, at the post office at Halsey, Oregon, under the Act of March 3, 1879.

Devoted to the material upbuilding of Halsey and surrounding country and Linn county generally. Subscription rate \$1.50 per year in advance.

M. E. Church Notes

Christ died for our sins, 1 Cor. 15-3.

The Sunday School lesson of today is the code of morals of morals of tomorrow.

The third quarterly conference was held on Monday evening. Supt. James Moore presided. The work of the charge was found to be going along in fine shape, and all accounts paid in full to date.

Don't waste your time in longing for bright, impossible things; Don't sit supinely yearning for the swiftness of angels' wings. Don't spurn to be a rush light because you are not a star. And brighten some bit of darkness by shining just where you are.

—Church Reporter.

High School Notes

On Monday the High School enjoyed an all day picnic. Six cars carried the students up near Holley where fishing, wading and numerous other sports made the day one to be remembered.

Tuesday morning the final examinations began. Thursday afternoon the last one was given. On Friday the students will assemble for a final report.

On Sunday evening when the baccalaureate sermon was being preached many comments were made as to what a pretty set of girls the class of '17 has. Very true, is the opinion of the rest of us.

Friday night the commencement exercises will be held at the Methodist Church. This will close a successful year for the Halsey High School.

Numerous different pennants have been observed floating over the High School lately. Only a proof that the H. H. S. contains a live bunch of youngsters.

—High School Reporter.

ALL AROUND THE FARM

GROWING RED CLOVER.

May is Rich in Protein, Palatable and of High Feeding Value.
[Prepared by United States department of agriculture.]
Red clover is the most important leguminous forage crop in what is known as the timothy-clover area, which includes New England, the middle Atlantic and the north central groups of states. It is also important in certain sections of the great northwest and in the northern part of the south central states. Where it does well it may be considered as the basis of permanent systems of agriculture. Red clover grows well on a variety of soils, but is best adapted to deep,

Experiments have shown that the removal of the hay crop does not destroy the value of the clover as a green manure crop. From 3 to 50 percent of its fertilizer value is probably left in the roots and stubble which can be plowed under. Picture shows turning under red clover for green manure.

well drained clay loams and to limestone areas. On sandy soils it is productive when well supplied with humus. In general it will not thrive on ill drained land or on sour or acid soils. The customary way of seeding red clover is to sow it in the spring on winter grain, which acts as a nurse crop. This is a cheap and convenient method, but it is often unsuccessful on soils which are low in humus content. In that case the surface of the ground is likely to dry out quickly after the grain has been removed, and as a result the clover perishes.

A Popular Refreshment

One that is relished at all times by young or old alike is our ice cream. It is made from pure, unadulterated cream and flavored with pure fruit flavors. Try some whenever you can. There is no more wholesome or delicious refreshment on earth. Parties and families supplied in any quantity.

CLARKS CONFECTIONERY

HALSEY HIGH SCHOOL COMMENCEMENT

On Sunday evening, at the Christian Church, Rev. Mr. Cain delivered the baccalaureate sermon for the graduating class of the Halsey High School. Rev. Cain was particularly interesting on this occasion and held the large assemblage that had gathered to hear him in close attention to his words throughout the entire sermon. The church was taxed to its capacity with the friends and acquaintances of the members of the graduating class. The commencement exercises will be held at the Methodist Church Friday evening, and a very interesting program has been prepared for the occasion. Those graduating are, Lillian Bressler, Ethel Quimby, Gertrude Porter, Clarissa Walton, Marcella Corcoran, Eldon Cross and Vincent Cain. Following is the complete program.

PROGRAMME

| | |
|------------------------------------|--|
| March..... | Miss Haan |
| Chorus..... | "Fairy Waltz"..... High School |
| Invocation..... | Rev. Cain |
| Address of Welcome..... | Ida Mitzner |
| Solo..... | Miss Perkins |
| Oration..... | "Scientific Problems Involving Organized Labor"..... Eldon Cross |
| Class Poem..... | Ethel Quimby |
| Instrumental Duet..... | Mrs. Hayes, Hazel Straley |
| Thesis..... | "Training for Efficiency"..... Lillian Bressler |
| Oration..... | "The World War"..... Vincent Cain |
| Solo..... | "To the Class Rose"..... Gertrude Porter |
| Class Prophecy..... | Clarissa Walton |
| Class Will..... | Marcella Corcoran |
| Presentation of Diplomas..... | Mr. F. H. Porter |
| "Five Minutes with the Class"..... | Mr. Maxwell |
| Chorus..... | "Over the Summer Sea"..... High School |

Class Flower..... American Beauty Rose
Class Motto..... Per Aspera Ad Astra

HOTEL HALSEY
HUGH LEEPER, Prop.
HALSEY, OREGON

It is best to sow the clover seed in winter grain very early in spring. The small seed disk drill is coming into favor for this purpose and should be used as soon as it is dry enough to keep the machine from clogging.

Another method of treating red clover is to sow it in the late summer or early fall on a thoroughly prepared seed bed. This, however, is not practicable in the more northern portion of the clover belt. A seed bed should be finely pulverized, thoroughly compact and comparatively free from obnoxious weeds. The seeding should be at the rate of ten to twelve pounds per acre of clover alone or of six to eight pounds when seeded with timothy. On heavy soils the seed should not be placed over one-half inch deep and on light soils not over one inch.

Red clover makes a splendid pasture, but there is danger that cattle and sheep which are turned upon it in early spring or following heavy dews may bloat. The practice of including a good part of timothy or blue grass in red clover pastures practically eliminates this danger. When intended for hay red clover should be cut as soon as it is in full bloom. When the stalks have thoroughly wilted and before the leaves have become dry and brittle the hay should be raked into windrows for curing. These should be put into racks, which will turn water to some extent, and left there until sufficiently cured for hauling. Exposure to bad weather darkens the hay to considerable depth in the stacks and seriously reduces its feeding value. For this reason it also pays to store clover hay under cover. The hay itself is rich in protein, palatable and of high feeding value.

Best Soil For Beans.
For beans the soil should be rich and mellow. To get them tender at picking time they should have quick and continuous growth, and this is best assured when they are planted in a warm, rich, porous soil, well drained and given plenty of water. Well rotted manure, dug into the trench, is best when applied at this time of year, and the soil should be made fine with the shovel when digging and finished with the rake. Beans are planted in two general ways—in hills and in furrows or drills. Cleaner cultivation can be given by the hill system, but more can be grown in the same space of garden by the drill plan.

Fall Farrowed Pigs.
The earlier fall pigs are farrowed the better; hence sows that have not yet been bred should be prepared for breeding as soon as practicable. The early fall pig, because it can make greater use of fall and winter pasture, has a decided advantage over the late arrival, while at the same time its greater size enables it to better stand the winter weather.

May For Swine.
Well cured alfalfa and clover hay make splendid foods as a part of the winter ration for both old sows and growing pigs. Cowpeas and other legume hays are almost equally valuable. Some legume crops can be seeded this spring for hay and thus help to reduce the cost of raising fall pigs. Let us not forget that grains will be high in price for years to come and that we must learn to grow all our meat animals more largely on roughage than has seemed necessary in the past.

Best Potato Soil.
To grow good, sound, smooth potatoes you simply must have a rich, loose, moist (not wet), mellow soil, where the growing tubers can expand freely and rapidly and form a smooth, even shape and surface, and must have also plenty of available plant food. This last point is where commercial fertilizers give most and cheapest help.

Care of Farm Tonic.
No farmer who owns his farm should delay the erection of a shed or building large enough to store all the farm implements, and he should further make it a point to teach the boys on the farm, and the hired help as well, to bring in all tools when no longer needed in the field.

Ringworm on Cattle.
Scrub the spots perfectly clean and then wet them at intervals of five days with a solution of two pounds of sulphate of copper and one gallon of water. Pure tincture of iodine applied twice daily is also effective. Cleanse, disinfect and whitewash the stable.

Public Sale Day
Saturday, June 16

that day.

Come - Everybody - Come
A Big Day

POULTRY PICKINGS.

- Cracked and floured perches harbor lice. Have only sound lumber in your perches.
- Feed your fowls liberally. Give them a variety of wholesome food.
- Dry feeding of baby chicks is the only way.
- Bran is as cheap a food as can be used for the mash.
- Feed the chicks sparingly the first ten days. They are apt to eat more than they have any business to do.
- Water should be given to the youngsters from the start.
- Baby chicks soon learn to scratch. There is no better medicine for them.

No Eggs, Milk or Butter

The following recipe shows how an appetizing, wholesome cake can be made without expensive ingredients.

In many other recipes the number of eggs may be reduced one-half or more by using an additional quantity of ROYAL Baking Powder, about a teaspoon, in place of each egg omitted.

EGGLESS, MILKLESS, BUTTERLESS CAKE

| | |
|----------------------|---------------------------------|
| 1 cup brown sugar | 1 teaspoon nutmeg |
| 1 1/4 cups water | 1 teaspoon cinnamon |
| 1 cup seeded raisins | 1/2 teaspoon salt |
| 2 ounces citron | 2 cups flour |
| 1/2 cup shortening | 5 teaspoons Royal Baking Powder |

The old method (fruit cake) called for 2 eggs

DIRECTIONS—Put the first eight ingredients into saucepan and boil three minutes. When cool, add the flour and baking powder which have been sifted together; mix well. Bake in moderate oven in loaf pan (round tin with hole in center is best) for 35 or 40 minutes. Ice with white icing.

Booklet of recipes which economize in eggs and other expensive ingredients, mailed free. Address Royal Baking Powder Co., 135 William Street, New York.

ROYAL BAKING POWDER

Made from Cream of Tartar, derived from grapes, adds none but healthful qualities to the food.
