

The Halsey Enterprise

An Independent Newspaper.

PUBLISHED EVERY THURSDAY

D. H. TALMADGE, EDITOR

Entered as second-class matter October 3, 1912, at the post office at Halsey, Oregon, under the Act of March 3, 1879.

Devoted to the material upbuilding of Halsey and surrounding country and farm country generally. Subscription rate \$1.50 per year in advance.

HOME! Kulturized

The Willamette Valley smiles again.

Fourth Liberty Loan campaign Sept. 28 to Oct. 19.

I. V. McAdoo has sold the Sherwood News to Edw. Murphy. "Mac" made a readable paper and the new publisher bids fair to make it still better.

The inevitable has happened. President Wilson on Tuesday issued a proclamation taking all telephone and telegraph lines under government operation July 31.

American transports are equipped with moving picture machines and operators. This is one of the many things the Y. M. C. A. has done and is doing for our boys.

A variation is noted in the daily papers in the number of Huns killed, wounded and captured, but under the circumstances what difference does a few thousands make? This writer confesses to a liking for the big figures.

The government is calling for 25,000 young women to join the United States Student Nurse Reserve and hold themselves in readiness to train for service as nurses. Enroll at the nearest recruiting station established by the Woman's Committee of the Council of National Defense.

Chamberlain's Colic and Diarrhoea Remedy

Now is the time to buy a bottle of this remedy so as to be prepared in case that any one of your family should have an attack of colic or diarrhoea during the summer months. It is worth a hundred times its cost when needed.

CAREFUL SANITATION TO PREVENT DISEASE

Poultry Coops and Houses Should Be Thoroughly Ventilated

Observance of Simple Rules Will Prevent Trouble by Overcrowding and Soil Contamination—Turn Soil in Yards.

(Prepared by the United States Department of Agriculture.)

With all classes of poultry breeders there should be more careful effort than ever before to secure thorough sanitation and thus to prevent disease.

On farms correct sanitation is secured in houses and coops by good ventilation at all times and the removal of the night droppings as often as necessary to avoid bad odor. On the land the desired result is obtained by distributing the stock so that all droppings are taken up as fertilizer by the vegetation growing on it so quickly that there is no soil pollution. Observance of these simple rules will not only prevent all diseases caused by

Chickens Are Always Healthier If Kept on Open Range.

overcrowding, and soil contamination, but the young stock reared under such conditions will grow faster and better. Where it is inconvenient to distribute a large stock as widely as is necessary to secure permanently the fine sanitary condition of land desired, the same result is obtained in growth by a rotation which places young birds always on land not used for poultry the preceding year.

In back-yard poultry keeping scrupulous cleanliness is essential. The night droppings should be removed early in the morning. Those which fall on the floor of the house and in the yard should be removed as often as is necessary to get them before they become finely broken and so mixed with the litter of the floor or the soil of the yard that much of such material must be taken up with them. Frequent turning of the soil in small yards is desirable, but ought not to be accepted as a proper substitute for removal of droppings there. If these are simply turned under in soil in which no vegetation is growing there is temporary improvement, but after a short time conditions become so bad that removal of the soil to a considerable depth is necessary. Clay soils should be frequently and liberally treated with lime.

Good sanitation checks the rapid multiplication of lice and mites, but does not destroy them. For this the appropriate insecticides should be used. In a series of tests of insecticides by the bureau of entomology sodium fluorid was found most effective, completely destroying all lice present at the time of application, and making the birds treated immune to attacks of lice for some time. The methods of using sodium fluorid for lice and of eradicating mites are given fully in Farmers' Bulletin 501.

STEERS PASTURED IN SOUTH PROFITABLE

Supplementary Feeds Return Profits While on Grass.

Results Given as Obtained by Experiments Covering Period of Five Years Conducted by Bureau of Animal Industry.

(Prepared by the United States Department of Agriculture.)

Supplementary feeds in addition to grass have been found to be more profitable than grazing cattle without such feed, according to results obtained by experiments, covering a period of five years, conducted by the bureau of animal industry of the department of agriculture, co-operating with the Alabama experiment station.

Cottonseed cake is an excellent supplementary feed for cattle on pasture. Larger daily gains, but more expensive gains, were secured when cake was

Steers on Pasture.

fed, but the cake-fed steers sold for enough more at the end of the season to make the feeding of cake extremely profitable.

Cold-pressed cake did not give as satisfactory results as the common cottonseed cake, when cold-pressed cake cost \$3 and cottonseed cake \$26 per ton.

Cottonseed at \$14 a ton proved somewhat more valuable than cottonseed cake at \$26 a ton for feeding to steers on pasture.

Steers which were fed a heavy ration of cottonseed cake on pasture and finished early in July proved far more profitable than steers which did not receive as much cake daily, but were fed for a longer time and sold late in the summer.

The feeding of cattle on pasture increased the size of the gains, caused the animals to fatten much faster and smoother, increased their value per hundredweight, and produced better carcasses and a higher percentage of marketable meat than the grazing of steers on pasture alone.

WOMEN ON FARMS

(Prepared by the United States Department of Agriculture.)

As to the use of women on the farms, the department recognizes that they can be of great value in certain minor tasks, but the department believes that if men of farm experience in the towns and cities can be released by the substitution of women labor temporarily, the needs of farmers will be supplied and there will be little demand for woman labor on the farm except for the lighter tasks.—Clarence Owsley, Assistant Secretary of Agriculture.

FOOD ADMINISTRATION CREDO

By willing service of a free people to do these things:

To feed the Allies that they may continue to fight.

To feed the hungry in Belgium and other lands that they may continue to live.

To feed our own soldiers overseas that they may want nothing.

To keep prices steady and the flow of distribution even that the poor at home may be fed.

To make everyone's effort count its utmost for winning the war for freedom.

FOOD CONTROL IN AMERICA IS OF AND FOR THE PEOPLE

OUR GREAT TASK

By Herbert Hoover.

If you could stand in the middle of Europe today and survey the land to its borders, you would discover its whole population of 400,000,000 human beings short of food. Millions of people in Poland, Finland, Serbia, Armenia and Russia are dying of starvation and other millions are suffering from too little food. Our Allies and the neutrals are living on the barest margins that will support life and strength.

This, the most appalling and dreadful thing that has come to humanity since the dawn of civilization, is to me the outstanding creation of German militarism. The Germans themselves are not the worst sufferers. They are extorting at the cannon's mouth the harvests and cattle of the people they have overrun, leaving them in desolation. If the war were to cease tomorrow, the toll of actual dead from starvation within the Ger-

PREVALENCE OF HIGH WOOL

Sheep Business Placed in New Light by Meat Value—Adds Stability to Farm System.

(Prepared by the United States Department of Agriculture.)

The continued prevalence of high wool and meat values has placed the sheep business in a new light. The result will be that this phase of animal husbandry will contribute materially to the nation's food and clothing supply. It will also add stability to our systems of farming and play an important part in the more complete utilization of our agricultural resources.

LEAVES USED AS FERTILIZER

Value Is Doubtful as They Contain 90 Per Cent of Water—Flow Under All Refuse.

(Prepared by the United States Department of Agriculture.)

The value of cabbage leaves as fertilizer is doubtful. They contain nearly 90 per cent of water, so that even if all the dry matter had fertilizing value, the quantity is ordinarily so small as to be of minor importance. In any case, the refuse should be plowed under on fields designed for the culture of crops other than cabbage or its relatives.

1,716,000,000 Pounds of Flour Saved

if each of our 22,000,000 families use this recipe instead of white bread.

One loaf saves 11,000,000 pounds; three loaves a week for a year means 1,716,000,000 pounds saved!

Enough to Feed the Entire Allied Army

Corn Bread with Rye Flour

1 cup corn meal	1 teaspoon salt
1 cup rye flour	1 cup milk
2 tablespoons sugar	1 egg
5 teaspoons Royal Baking Powder	2 tablespoons shortening

Barley flour or oat flour may be used instead of rye flour with equally good results. Sift dry ingredients into bowl; add milk, beaten egg and melted shortening. Stir well. Put into greased pan, allow to stand in warm place 20 to 25 minutes and bake in moderate oven 40 to 45 minutes.
