Prices are right and the miles are noticeable.
MORTON & DOTSON
Albany

Methodist Church
Rev. C. T. Cook and family were in Albany Thursday of last week.
The Epworth League members held their business meeting and social at the home of Harry Davis Tuesday evening. They spent the evening in games of contest. As a feature pictures had been cut out of papers and magazines of houses, pianos, autos, etc., which were auctioned off to the highest bidder. Beans were the measure of money. Each bean represented \$5. Refreshments were served, and all went home knowing that a good evening had been spent.

A committee has been appointed by the Epworth league to plan for a county Epworth league convention to be held at Halsey, if possible in June.

Don't forget that Sunday will be mother's day. At the morning service, 11 o'clock, a mother's day sermon and appropriate music will be given. A flower for you if you come, in token of mother, whether living or gone to her eternal home. Everyone is invited to come.

In the evening at 7, the hour for Epworth League, the Intermediates will have a mother's day program. They invite all mothers to come. They are a live bunch of young folks. Mrs. Mornhinweg is their superintendent. Cor.

Boy Scouts' Summer Camp
On the 5th of June the Halsey Boy Scouts will go into summer camp. Boys of scout age (12 to 18 years) may be admitted by making application to Dr. Garnjost. No location for the camp has been decided on, but several are under consideration. Dr. Garnjost will make the trip. Charles Mornhinweg will act as assistant scoutmaster. A bully good time is anticipated.

stood out prominently among the most smartly dressed, says Dry Goods Economist. And after the spring racing meets were finished and pleasure seekers left for the leading seashore resorts, it was noticeable that white was prominent in the expensive wardrobes of Parisian women.

Accordingly, we see white chosen for the backgrounds of printed designs applied to silks, or embroidered figures carried out in ornate fashion to light up white grounds.

This was expected. As every one knows, black overshadows all colors in popularity, both for dress and for millinery purposes. Naturally, black brought into prominence striking contrasts evidenced by the adoption of each of the primary colors of blue, red and yellow for combination with black.

But for a striking combination with black, white knocks all colors out in the first round. At the spring racing

Basque Waist and Bouffant Skirt.

meets in France there were several combinations of white and black, white predominating.

Next to black, bright colors, especially reds, afford excellent combinations with white, and the two other primaries of blue and yellow follow in the order of appropriateness for combination with white.

Similarly, the secondaries—that is, the combination of two primaries resulting in purple—green and orange—have been chosen by many designers for combination with white, especially in the form of motifs for the decoration of white grounds.

MARKET REPORTS SENT BY RADIO

Quotations on Agricultural Products Are Broadcasted by Government Stations.

KEEP FARMER WELL POSTED

Government Aims to Make the American Farmer the Best-Informed Farmer in World—States Also Interested.

Washington.—The wireless is now being used by state and federal agencies to broadcast national and local agricultural market reports throughout virtually the entire country. Reports on the national markets are dispatched daily by the United States Department of Agriculture from wireless stations of the post office department at Cincinnati, Omaha, Washington, North Platte, Neb., Rock Springs, Wyo., Elko, Nev., and Reno, Nev. These reports are received by hundreds of amateur wireless operators. National market reports are also received by state bureaus of markets and agricultural colleges, supplemented with local market reports, and relayed by wireless telegraphy and telephone to farmers, shipping associations, newspapers, banks, and other agricultural interests.

The St. Louis university at St. Louis, Mo., was perhaps the first among educational institutions to broadcast market reports by wireless. Their reports are received by hundreds of farmers, shipping associations, banks, and other agricultural interests, and a telephone company in eastern Illinois which receives the reports telephonically the news regularly to its 5,000 subscribers.

Telephone and Telegraph.

At Lincoln, Neb., the University of Nebraska and the Nebraska Wesleyan university are co-operating in broadcasting crop and market reports furnished by the state bureau of markets. Both radio telephone and telegraph are used. In Wisconsin the State department of markets broadcasts national and local market reports from the University of Wisconsin wireless station at Madison. At Minneapolis, crop and market reports are broadcast from the University of Minnesota radio station. The Minnesota college of agriculture has also

STRAWBERRY ONE OF BEST FRUITS

Plants Are Easily Handled and Can Be Purchased at Small Cost From Nurseryman.

REQUIRE VERY LITTLE SPACE

May Be Grown in Hills or in Narrow or Wide-Matted Rows—Give Frequent Cultivation and Hoeing During Season.

(Prepared by the United States Department of Agriculture.)

Strawberries are so easily handled and require so little room, that if only one of the small fruits can be grown they should be the one selected. New plants may be purchased at small cost from a nurseryman, or perhaps may be obtained from a neighbor. Strawberries may be grown in hills or in narrow or wide matted rows, or in narrow or wide matted rows, says the United States Department of Agriculture. For very small areas, plants set in hills close together will no doubt produce the most and largest fruit, but will require more care than matted rows.

For hill growing, set the plants one foot apart in the row and have the rows just far enough apart to cultivate easily, say from two to three feet; or set rows a foot apart in double rows and have a space of two or three feet between the double rows. Keep all

Everbearing Varieties Are Most Satisfactory for Hill Culture.

runners cut off and give good cultivation, so as to make extra strong plants. Some of the choicest varieties for hill culture are the Marshall and Chesapeake of the single crop kind and the Superb and Progressive of the everbearing varieties. The everbearing varieties will no doubt be most satisfactory for hill culture.

Starting for Matted Rows.
To start matted rows, set the plants 18 inches apart in rows from three to four feet apart. For a narrow matted row, train the first runners along the row, covering about a foot in width, and cut off all later runners. From four to six new plants from each plant set will make a narrow row. For

wide matted rows, save enough new plants to make the row two feet wide, or more, as desired. Do not let the plants crowd each other; have them four to six inches apart.

Set strawberry plants early in the spring, if possible, so they will get the benefit of spring rains and make a strong early growth. Trim off the dead leaves and all but one or two of the live ones and cut the roots to about four inches long. Spread the roots somewhat and set the plants just as deep as they were before they were dug. Be especially careful not to set them deeper and do not get earth over the growing tips, for this will probably kill the plants.

Give newly set strawberries frequent cultivation and hoeing during the entire season to keep down the weeds and make strong plants for fruiting the next year. Pick off all blossom buds which appear except in the case of fall-bearing varieties, on which blossoms may be left after August 1 to fruit in the fall. When the ground freezes cover the plants or the entire bed with about two inches of straw or other vegetable matter free from weed seeds. Coarse straw manure, with the fine portions shaken out, is excellent for this purpose. The object of this winter covering is to keep the ground from freezing and thawing with each change in temperature, because this freezing and thawing will slowly lift the plants out of the ground.

Nitrate of Soda Helps.
In the spring when the plants begin to blossom spread nitrate of soda along each side of the row, using one pound to 80 feet of row. If the ground has not been mulched, cultivate and then mulch with vegetable matter between the rows, so as to conserve the moisture from the spring rains.

If the bed is to be saved for another year, rake off the mulch as soon as the crop is gathered, and hoe or pull out the older plants, leaving only enough of the younger ones to send out runners to make a new narrow or wide matted row, as desired.

Old beds may be cleaned up, as just mentioned, by hoeing or plowing the spaces between rows and leaving the youngest plants in the row. It is generally best, however, to start a new bed every second year.

OX-WARBLE IS COSTLY PEST

Loss Caused by Decrease in Milk Flow, Destruction of Hides and Meat Wastage.

"The little ox-warble means an actual cash loss of \$50,000,000 to the United States each year," stated F. C. Bishop, of Dallas, Tex., in an address before the American Association for the Advancement of Science, at their meeting in Toronto, recently.

"The loss comes," he said, "through a falling off in the milk flow, illness among the cattle, due to irritation and worry, destruction of hides and wastage of meat when the beast finally goes to the block."

"When the grubs reach the back of the animal," said the speaker, "they make their presence apparent by the lump or swelling their body causes. Gradually they make their way out through the back of the animal and drop off, to begin all over again their life history. The only hope of dealing with the pest lies in energetic action by cattle owners in working out and destroying the warbles from the backs of their stock. The herd should be gone over systematically every 30 days, the grubs squeezed out and destroyed. Of course, even then, there is loss because of the holes left in the hide; five punctures of the back or sides by warbles reduce any hide to No. 2 grade."

CLEANING AND GRADING SEED

No Other Single Farm Operation Which Gives Larger Returns in Producing Crops.

There is no single farm operation so easily and cheaply done, which gives larger returns than the thorough cleaning and grading of all seed sown. Besides cleaning out the weed seeds, the light weight seeds are taken out when the job is properly done, thus preventing the reproduction of the poorer plants. This practice carried on year after year permits the increase of the best and kills out the poorest. Thorough cleaning and grading of all seeds planted is the first step toward a successful crop. There is no time like the present to put the seed in proper shape for planting.

Miss Mary Rogers, 62, died Saturday on the farm near Harrisburg where she was born.

WOMEN'S STUDY CLUB.

Notice

By order of the council in session May 8, 1922, May 16th, 17th and 18th were appointed as clean-up days for the city of Halsey.

All rubbish must be piled on the west side of the streets running north and south.

The rubbish must be either in boxes or sacks. Anything it is possible to burn will not be taken.

By order of the council
E. F. Cross, Recorder.

MAY FAVOR WHITE

Paris Sets Style for Spring and Summer of 1922.

Color Chosen for Backgrounds of Printed Designs Applied to Silks or Embroidered Figures.

All authorities are agreed that white is to make an excellent showing during the spring and summer seasons of 1922, as there is an international movement in that direction. At several of the spring racing meets in France, attended by the well-dressed women of many nations attired in the latest creation of Parisian dressmakers, white
