LOW RATES for time payments on these cars

ANY FAMILY entitled to credit may buy a General Motors car and pay for it while using it, under the GMAC Plan.

When time payments first became an accepted form of car purchase, General Motors organized its own finance company, the General Motors Acceptance Corporation, to make sure that the sale of its cars on time would be in the buyer's interest and that the finance charges would be fair.

GMAC rates have always been low; and the last reduction has saved General Motors' customers more than \$12,000,000.

The General Motors line includes "a car for every purse and purpose"—a suitable model for every income. You can buy it out of income, paying no more than the cash delivered price, plus only the low GMAC financing charge. And the whole transaction is so conducted as to keep your goodwill and satisfaction.

Back to Nature

Doctors told Thomas Brenf, owner of the \$700,000 Amalgamated foundries, that within a year he must go back to nature, either in a wooden overcoat or without. He chose to go without.

"Geeh," He said to Himself With a Grunt. "They Think I'm a Wild Man!"

Here he is, back pretty close to nature. We see him just leaving a Sunday school picnic. The story began in the Rural Enterprise May 5, 1927.

We have back numbers. For ten cents we will send the entire story to any address in Oregon.

Have it sent to a friend.

We cannot afford to refuse acceptable advertising, for that is what supports a newspaper. This week, for once, the Enterprise has been flooded with prosperity, and we have been forced to cut down the installment of "With the Clock Turned Back," and postpone some other matter. Next week there will probably be no over-supply.

Numbering Gear Shift to Help in Handling Lever

In teaching his wife to drive a motorist found that she was having great difficulty in remembering the several gear-shift positions, and as a result was slowing up her shifting considerably, due to having to stop to think which lever position was which. He hit upon the idea of employing some small metal numbers, such as might be used for small signs and the like, "occurring a 1," "2," "3" and an "R," he nailed them to the footboard in proper position to indicate the way the lever had to be shifted to effect any given speed change. The idea worked to advantage, and the beginner had only to glance down at the numbers to know exactly which way to carry the lever, eliminating all uncertainty.
