

REPORT PUPILS ATTENDING ANNUAL HIGH CONFERENCE

Wilma Wahl and Ruth Sturtevant Delegates Report to School

Ruth Sturtevant and Wilma Wahl wish to thank the Student Body for making it possible for them to attend the annual high school conference at Eugene. Miss McCormack accompanied them as adviser.

The girls left for Eugene January 12 on the Southern Pacific stage and arrived there about 6:30. They were met by a group of college folks and were presented with tickets for the bus which conveyed them to the university administration building and places assigned them at Gamma Nu fraternity house during their stay.

Friday morning they went to the Woman's building for the university assembly. Elmer L. Sherril, dean of men, gave a short address of welcome and introduced to the assembly the speakers of the morning the main speaker being William J. Cooper, state superintendent of public instructions of California, who spoke on "Right, Use and Abuse." The assembly was then divided into three classes the delegates going as editors of school papers, annuals, etc., and journeyed to the Journalism building, the student body officers to the Music Auditorium and the association of girls leagues remaining in the Woman's building.

The problems discussed and lectures given in both the Journalism building and the Music Auditorium concerned those of the larger schools rather than the smaller ones. At noon we adjourned to the Gamma Nu house for lunch and then back again for the afternoon session.

At 3:40 Friday afternoon the press delegates were taken through the university press and at 4:00 o'clock the assembly of delegates was taken on a tour of the campus but owing to the rainy weather very little was seen.

A banquet was given the delegates at 5:45 in the Woman's building. Twelve long tables were set with 21 places each. After the banquet the assembly adjourned to McArthur Court where the basketball game between the U. of O.

and Gonzaga College, of Spokane, Washington, was in progress. The game ended in a score of 34 to 15, U. of O. winning.

From the game we returned to the Woman's building where a program of entertainment closed a very pleasant day.

Saturday morning we reported to our various buildings and then at 11:00 o'clock assembled at the Woman's building where a style show was put on by the college girls for the girl delegates. This completed the conference for 1928 at Eugene.

Life Guards Use Speedy Seaplane

The corps of life guards at Santa Catalina Island, Calif., is the first in the United States to make practical use of aerial transportation in the work of patrolling the beaches and rushing aid to persons and vessels in distress offshore. The guards fly their plane to the aid of persons in distress, drop life preservers near them, and then alight on the water to take them aboard.

Can He Keep Ruth on the Ground?

Lyle Wemack, husband of Ruth Elder, the famous woman flyer, seen above closely clinging to her, says that, now he has got her back, he hopes she will quit flying. But Ruth shows no disposition to remain on the ground, asserting that next year she and Haldeman will try again to make the flight across the Atlantic.

Barn Will House 16 Sows With Hay Storage Room Above the Pen Floor

By W. A. RADFORD
Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie Avenue, Chicago, Ill., and only inclose two-cent stamp for reply.
Here is an unusual farm building. It is a hog barn, designed for 16 sows, with hay storage room above the pen floor. The building is 52 feet long and 24 feet wide, with a one-story addition, 20 feet square, for the feed storage and feed mashing and cooking room.
This hog barn, of course, will not appeal to every hog raiser, but for those farmers who raise the litters from that number of sows, it will be found a labor-saving structure. The floor plan of the pen floor shows how the pens are arranged, with a center alley wide enough for a wagon to be driven through and an overhead carrier system for the distribution of feed, both dry and liquid.
The building is a frame structure set on a concrete foundation with a concrete floor. A ventilating system is installed to maintain fresh air without draughts or moisture in the first floor. The haymow acts as insulation for the pen floor in winter, making a snug, warm, well-ventilated house for the sows and their litters in early spring.
Outside the building on both sides are feeding floors, so that when spring advances and the weather becomes warm, the pigs and their mothers may be turned out in the yard, and fed on the floors. The pen partitions are movable so that in summer the house may be turned into a large open house for the hogs. Movable plank floors and guard rails are installed in each pen for cleanliness and safety for the young pigs.
