

**HALSEY ENTERPRISE**  
Published Thursday at Halsey, Oregon  
H. F. and A. A. LAKE  
Publishers

Entered at the postoffice at Halsey, Oregon, as second class matter.

\$1 a year in advance. Arrearages 12 1/2c a month. Stops when time expires unless continuance is ordered.

Advertising 25c an inch; no discount for time or space; no charge for composition or changes. Announcements of entertainments, food sales, etc., whose object is to raise money, charged at regular advertising rates. Announcements of religious meetings, not exceeding four inches, free if copy is received before Tuesday.

Perhaps the most extensive and effective rural educational tour ever attempted was recently completed under the auspices of the North Dakota agricultural college, which sent a special dairy-poultry train, bearing speakers and exhibits into 87 communities of the state.

The tour lasted 34 days and was devoted to the encouragement of more efficient production, through the development of better herds and flocks along pure bred lines. The necessity for culling poor producers among both cows and hens was stressed, and it was pointed out that satisfactory profits are possible only through the employment of advanced methods, including better breeding, good feeding, sanitation and the elimination of "boarder" animals which do not pay for their keep. The raising of all feed on the farm was also urged.

The principles advocated by these specialists lie at the very foundation of success in the dairy and poultry industries, and the methods they recommend are applicable everywhere.

In carrying on this program of farm education the North Dakota agricultural college is performing a real service to its state, and by example is conferring benefits upon agriculture beyond its borders.

With the avowed purpose of cooperating with federal and state agencies for the betterment of farm life and improving the lot of farm women, the Women's Farm and Garden association at its annual session in Dea-born, Mich., adopted a comprehensive program.

The delegates were the guests of Mrs. Henry Ford, national president of the association, who proposed a plan for extending scholarships for women in farming, gardening and allied occupations at state colleges.

Other activities decided upon were efforts to bring about closer relationships between farm women and city women; to aid women trained in agriculture and horticulture to obtain remunerative employment; to assist members in developing better methods of marketing garden and home products; in short, to encourage all phases of activity which tend to improve the condition of rural women.

It is becoming more widely recognized among thoughtful people in all walks of life that the future of agriculture will depend in a large measure upon the betterment of living conditions. Anything which will help to bring closer social relationship the women of the farm and city will be a valuable contribution to that end.

Oregon mills are adopting ultra-modern looms that will weave six and a half yards of cloth per hour. Older looms weave four and a half yards per hour. Good prices for wool are in prospect for years to come. This is the opinion of E. C. Carter, a veteran woolen mill man of the Pacific coast country, after a trip to the style centers.

A campaign orator declares that "the heart of America is sound" and the old lungs seem to be hitting on both cylinders, too.

Lest our readers may have forgotten it, we remind them that the issue of the campaign is the tariff.

It doesn't pay to be fussy about one's traffic rights with a 10-ton truck on the port bow.

## Do You---

This is a community in which each one of us is expected to do his share toward making it a better place in which to live.

Each member of the community should take an active interest in all local affairs. Each member should turn out to every meeting where community developments are being discussed.

It is only through whole-hearted co-operation that we can hope to build up and hold the future growth of this community at a mark of which we may all feel proud.

If you have been shirking even a small part of your civic duty in the past, make up your mind right now that for your own good as well as for the greater welfare of the community that you will do your full share in the future.

### Booklet on Marketing

The Agricultural Marketing department of the Portland Chamber of Commerce has a few hundred booklets entitled "Marketing is the World's Business," which is believed would interest any farmer or any other person interested in marketing farm products, and the booklets can be secured from that department upon a personal request by letter from those desiring same. The booklet is very attractively illustrated and contains what is believed to be very sound statements on marketing.

The booklet was prepared by the Extension department of the International Harvester Co., and a limited quantity purchased by the Portland chamber who are anxious to get them into the hands of those who will study them.

### Utilities Say Facts are A Duty

It is the duty of the electric utilities to bring before the public the facts concerning that industry, and it is of vital importance that they do this now, when the public is being deluged with misleading and inaccurate statements, declares H. T. Sands, president of the National Electric Light association.

"In such a situation what is the public to do? To whom shall it look for facts and enlightenment? Shall we leave it to grope blindly for the needed information, or shall we speak out boldly and fearlessly?" he says.

"If we would have the public play fair with us we must first play fair with it, and we are not playing fair when we allow the public to be influenced by misleading and at times erroneous statements based on theory rather than facts, and fail to provide the information necessary for intelligent conclusions.

"I have an abiding faith in the inherent integrity and ability of the American public to deal fairly with our industry when possessed of the necessary information for the exercise of sound judgment. If we, for any reason, fail to see to it that the public has this information, we must not blame the public if at times it fails to accord us that measure of justice to which we feel entitled.

### O.S.C. Summer School Closed

Last week saw the closing of the six week summer school at O.S.C. and is said to have been more widely attended and generally more successful than ever before. The total registration is said to be about 1400, more than half of which were regular degree students.

Miss Agnes Chandler of Halsey who will teach in the Peoria elementary school, attended the summer session, majoring in English and government to assist her in her work for the coming year.

Objecting to her husband's airplane flights, Mrs. Emery Westlake of Chicago told the judge that a married man's place is on earth, not in the air.

Intelligence test question: Which platform said which about prohibition?

### Protect New Pastures by Eradicating All Weeds

Cows do not like weeds, and newly planted pastures, particularly where the stand of grass and clover is poor, should be mowed to destroy these pasture pests.

"Weeds do considerable harm to pastures," says S. J. Kirby, extension agronomist at the North Carolina State college and student of pastures. "As a rule, we find more weeds in those pastures where there is a poor stand of grass and clover, but even where there is a good stand in one and two-year-old pastures, it is not uncommon for weeds to give much trouble. Where the weeds are mown once or twice after seeding the pastures, the sod gets ahead and the weeds give little or no trouble thereafter."

Mr. Kirby points out that probably the greatest injury to pastures from weeds comes from the choking and shading done to the grasses. However, the pests also use up the moisture and plant food and if all of these influences are not checked by mowing, the weeds take the pasture and little grazing is obtained.

Midsummer is the time to get rid of the weeds. Those grasses and clovers which were retarded by the late spring and subsequent drought will quickly come into their own if the weeds are clipped. Where the pastures are properly protected from these two enemies, weeds and bushes, they will give heavy production of pasturage for many years.

### Suckering Corn Costly

Practice for Gardener  
Suckering sweet corn is a practice handed down from time immemorial. Gardeners have gone on removing suckers, never doubting that it increased yield and quality. Recent experiments by H. C. Thompson, Cornell university, proved this practice not profitable either in increasing the yields or quality.

The work was carried on for five years and showed that with varieties which do not sucker heavily, there was no evidence of injury from the practice, nor any decided advantage. With types which grow many suckers, suckering didn't increase yield materially, but added to the cost \$3 to \$8 an acre. During periods of extreme drought or hot weather, suckering even may prove injurious to corn.

TUESDAY, AUG. 7, 8 O'Clock

## "A Ship Comes In"

Featuring Rudolph Schildkraut, Louise Dressler and Robert Edson.

She loved her husband and her son devotedly, and she smiled when duty called her boy to the colors, but when her husband, though innocent, was convicted of murder, she—a story of sublime love and faith, beauty and charm.

### Growth of Cable Service

The first successful cable to be laid was to Callas from Dover, about 1850, by Jacob and John Brett. In 1855 the first cable messages were exchanged between England and America. There are now over 300,000 miles of cable over which messages can be sent at the rate of 100 words a minute.

### In Different Instances

#### Fall Plowing Benefits

Fall plowing in no way causes a loss of fertility unless we have an open winter and heavy rains, so that the soil will wash readily. No fertility is ever lost by evaporation. Nothing but moisture goes; the solids are all left behind. In many instances, fall plowing is a benefit to the soil. Especially is this true in heavy clay or muck soil. The exposure to the elements in the winter, the action of the frost, pulverizes the clay and puts it in very much better mechanical condition. There is some danger in losing a portion of the soil by washing when it is fall plowed. If the land is left in sod, heavy rains do not wash away the soil, but when dowed, erosion may occur.

### Fortune Telling

By THOMAS ARKLE CLARK  
Dean of Men, University of Illinois.

THERE is a window sign that flouted itself in my race every time I walked down the long street in Provincetown during the month of my vacation:

"Spiritualistic Readings  
By Appointment."

I knew very well that the whole thing was a fake and that the last two words on the placard were merely for psychological effect. There was no crowd rushing in to obtain a reading. In fact, I never saw anyone entering the house, though I passed it two or three times daily for weeks. There was no necessity of making an appointment; one could have had his future and his past laid before him any time he was inclined to call. The sign interested me, however. I wondered what the reader would say if I should go in. I had curiosity, but I still had a trace of judgment left, so I looked and passed on.

It is strange how much we like to be told what we are and especially what we are going to be. The newly arrived guest at the inn who sits across from me at table told me at luncheon today that I had a psychic hand, and then she looked wise and made a few other personal remarks about my possibilities. Now, I don't know whether a psychic hand is a desirable possession or not, but I judged from what she suggested that it is.

A clever man who depletes character

### Her Choice

Of candies, fresh from the factory, and packed in neat and attractive boxes always makes a hit with her, if bought at Clarks.

Better make a hit.

Clark's Confectionery

from looking at a few lines of one's handwriting came into the office a few weeks ago and predicted our future for us. He told me I was impulsive and tender-hearted, and a lot of things that anyone with half an eye could tell by looking at me even if he had never come within a hundred miles of my handwriting. Of course it pleased me.

Jim was sitting at the desk with his head on his hand indulging in an exciting spell of the blues. He came into the game and deposited a specimen of his chirography before the expert.

"You are easily discouraged," the interpreter of penmanship said. "At the present time you are in love, and the object of your affections does not fit as warmly as you would desire. You are changeable, and having tried one job, you are likely soon to give it up and attempt another."

Jim was amazed. "How do you suppose he does it?" the boy asked. But you see it isn't so difficult as it seems if you keep your eyes open.

There are wonderful ways of reading the future and of looking into the past—tea grounds and cards and the lines on one's hands. It is unbelievable what a palmist can tell you if

you only let her hold your hand for a while, and most of us like what we are told, especially if we know it isn't true; and though we laugh to scorn what we are told, yet after all it feeds our pride and our self-esteem.

But I wonder at times if we really could read the future, or have it done for us, and find out what is in store for us and when, if we would have the courage to do it. I doubt it. (© by Western Newspaper Union.)

## Easier On You—Easier On the Horses

Here's the spreader that economizes man-power and horse-power—the top of the box is from 6 to 10 inches lower, and the drive wheels are from 4 to 8 inches higher than on any other spreader—there's a real labor-saving and draft-reducing feature which explains why the most widely-used spreader in most sections is the

### JOHN DEERE SPREADER

The Spreader with the Beater on the Axle

Beater-on-the-axle construction also means better work—the beater is close to the ground and delivers the manure where side winds will not cause drifting. The low-down box can be loaded flat on top—the best way for effective, uniform work.

And here's another advantage of its construction—the John Deere is much simpler, requires fewer repairs and lasts much longer than the ordinary type of spreader.

Come in and examine the John Deere—compare it with other spreaders. Remember, only the John Deere Spreader has the beater on the axle—the low-down box, together with high drive wheels.
