PROPER TIME TO FATTEN POULTRY

(Prepared by the United States Department of Agriculture.)

Early autumn is the time poultry raisers will usually find advantageous to fatten and dispose of surplus cockerels as well as early hatched pullets of a quality not desired in the flock of winter layers. Market poultry prices are usually highest just before Thanksgiving and Christmas. Another advantage in selling surplus stock fairly early in the season is found in the saving of considerable food materlal

Dr. M. A. Jull, poultry husbandman, United States Department of Agriculture, recommends as a fattening ration a soft mash, measured by weight, composed of corn, four parts; oatmeal two parts; middlings, two parts, and beef scrap, one part. The ground grain should be mixed thoroughly and moistened with sour skim milk or buttermilk. Milk is excellent in fattening mixtures and about two pounds, or a quart, of milk is used to each pound of mash.

Care should be taken not to feed the birds too much during the early part of the fattening period. For the first few days of this diet feed lightly three times a day. For the rest of the period give the birds all they will eat three times a day but do not leave it before them. A four-pound cockerel should add a pound in two weeks. Four pounds of the grain ration may produce a pound gain.

Experienced fatteners sometimes keep poultry on the fattening feed for as long as three weeks; but in most commercial fattening plants the birds are fattened for from seven to ten days. There is often a difference of 5 cents a pound between the market price of thin and plump birds. However, farmers in many parts of the country may not find such advantageous marketing opportunities, and the prices received may not pay for the expense and bother of fattening the birds. In such cases it may prove wisest to sell direct with no attempt to fatten the fowls. Many such birds are bought at the markets by fatteners and conditioned and fattened for

Culling should be a continuous process from the time the egg is selected until disposition is made of the bird. With the young stock this constitutes removal of unthrifty birds. The pullets should be selected from the standpoint of size, relative rate of maturity, and health. On the other hand, with laying hens, other than the occasional removal of outstanding poor individuals, the ideal time for culling is at the end of the laying season, which each month for the purpose of removlenends upon the desired diately cut down production costs.

OUR COMIC SECTION

FINNEY OF THE FORCE

Written for Poetic Drama

The song "Sweet and Low" was written by Alfred Lord Tennyson as one of the songs for his poetic drama, "The Princess." Two songs were written with the same title, but the one published was chosen by his friends, to whom he submitted them. No special story has been recorded about it, other than that the thought was taken from notes made by the poet when he was spending some time at the seasido several months previous.

Books That Talk

The Visagraph is the name of a new device to aid the blind in reading. Books printed in "Braille," or raised type, are still necessary, but the reader, instead of reading the letter by passing his fingers over it, receives vibrations from a radio set. A photo-electric cell picks up a light image from the raised letter and transmits it through tubes to a radio loud speaker .-- Youth's Companion.

Golden Gate Amenities

To a certain San Francisco newspaper's assertion, in alleged verse, that this paper's large and quite enough for any person's need," the Argonaut of that city reports: "It is quite enough for wrapping an old pair of shoes, or for a few books, or even, perhaps for the laundry; but suppose it is needed for all three purposes on the same day."

Guide for Sawing

In making saw cuts across the grain of a board for the purpose of forming a groove, the beginner in woodworking may have trouble in following the lines accurately. A short straight edge, bradded or held with a hand screw against the outer side of the knife mark, will guide the saw .-Popular Science Monthly.

Train Has Right of Way

A Supreme court decision handed down recently contains the following: When a man goes upon a railroad track he knows that he goes to a place where he will be killed if a train comes upon him before he is clear of the track. He knows that he must stop for the train, not the train stop for him."

Sentenced to Plant Trees

Out in the western part of Canada, where they appreciate the value of trees, a resident was found guilty of a plece of carelessness which resulted in a small forest fire. The forest ranger had him arrested and he was found guilty and sentenced to plant 100 trees.

Military Cycle

Designed for cross-country service, a three-wheeled motor cycle has been tested in England. There are two small wheels in the rear and the machine has a duplex steering arrange-. . . cycle has been proposed ment. especially for military uses.

Domestic Adjustments

It is not a bad guess, says a prominent medical authority, that 5 per cent of the better educated women in America find it very hard to adjust themselves to the duties and limitations of domesticity .- Woman's Home Companion.

Culling Undesirable

resale.

runs from July to November. From July on the flock should be examined ing the poorer hens. Just how rigid the reduction of the flock. The later culling enables one to be more exacting in the selection of the superior birds. Obviously it is to the advantage of the poultryman to make more than one culling as he is thereby able to imme-

to it.

Castoria is a comfort when Baby is tretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done, for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctors' word for that! It is a vegetable product and you could use it every day But it's in an emergency that Castoria means most. Some night when constipation must be relieved-or colic pain -or other suffering. Never be withou it; some mothers keep an extra b le anopened, to make sure there will at ways be Castoria in the house. It is effective for older children, too; read the book that comes with it.

?..................... Poultry Notes ¥*****

If pullets are too slow in starting to lay, give them a wet mash daily for a week or so. That often starts them.

Ground yellow corn, with plenty of milk and a range of rape, clover or alfalfa, will keep the young chicks in alfalfa, white good condition.

An effective way of eradicating lice is by means of sodium fluoride. It is easy to apply and inexpensive, and yet how many fail to take advantage of this valuable procedure.

The ventilation problem in the poultry house is much easier to solve if the hens are given enough floor space. Three and one-half square feet of floor space should be allowed for each hen in the flock.

The development of chicks will be checked and hens will step laying if the common red mites are permitted to grow and develop. In warm weather mites multipl, rapidly.

More than \$15,000,000 are lost each cear because of fertile eggs put on the market from June to October. Most of this loss comes from the farms because the male birds are kept until fall or winter, it is the eggs fertilized by these males that rot after they leave the far...s, causing heavy losses all along the marketing line.

Good poultry is necessary if there is o be a profit made by keeping it. Specialized farms are becoming more numerous, but for many years to come the main ou put of eggs and poultry ment will be supplied by the general farms.
