

The Beaverton Review

and THE BANKS HERALD

Issued Every Friday At
Beaverton, Oregon.

J. H. Hulett
Editor and Publisher

Entered as second-class matter December 13th, 1922, at the Post Office at Beaverton, Oregon, under the Act of March 3, 1879.

Subscription, \$1.50 per year.

Advertising rates on application.

Some people feel at home everywhere except at home.

The moonlight is almost as dangerous as the moonshine.

Ride and the girls ride with you. Walk—and you walk alone.

This is the flappers' slogan: "Save the surface and you save all."

A wise bachelor never takes a girl riding on a moonlit night.

Green has a quieting effect on the nerves, especially if it is long.

The honeymoon is over when he thinks she is skinny instead of slender.

The family skeleton looks better in a closet than in a bathing suit.

When you see a stenographer reading, it isn't liable to be a spelling book.

No wonder everybody wants to be President. His pay is not income taxable.

Only ten out of every hundred flowers is scented, but the same is true of onions.

Always rise from the table with an appetite and you will never sit down without one.

The pessimist may be a fool to hope for the worst, but it shows that he knows human nature.

If barbers talk too much and women talk too much how much too much do women barbers talk?

Women make better swimmers than men because they get their training during bargain counter rushes.

The way to a man's heart is through his mouth, but the way to a woman's is through her eyes and ears.

A skinny bathing girl has no chance to get sunburned because she stays in the water most of the time.

The sad thing about trying to be cheerful all the time is that you soon run out of things to be cheerful about.

One should always be careful—even of birds. Many a swallow has been known to possess a wicked kick.

The public is so listless this summer; we have been discussing the same Chicago murder case for several weeks.

A magazine writer tells us that a dog fills an empty space in a man's life. This is especially true of the hot dog.

You know how big a cinder in your eye feels? Well, that's small compared to the way a man in the public eye feels.

A friend of the nation's wild life proposes a law forbidding the shooting of any kind of game. Would that include the shooting of craps?

MR. AND MRS. READER
When you pick up a copy of your home paper, do you give any thought to how it was produced, or the money that is spent to print it and deliver it at your home?
The newspaper of today, a matter if twenty five cents a copy was charged, would be the cheapest thing you bought.
In the first place it represents an investment in plant and equipment of several thousands of dollars. Its editor and staff work diligently day in and day out to gather all the news and present it to you in readable fashion. It aims to keep you informed on all the

news that's "fit for ink." With the average paper, the price you pay for subscription does not cover the cost of white paper.
Yes, the newspaper is the cheapest thing you can buy. Think it over. Look it over. Then support your home paper. It's the best investment you can make, for it brings the largest returns.

THOMSON PICTURE TO BE SHOWN HERE

Fred Thomson, starring in the Film Booklet Office attraction, "The Dangerous Crowd" will thrill you at the Pacific Theatre Saturday and Sunday, in a hair raising four-round fight with Al Kauffman, former heavy-weight pugilist. It can be truthfully said that the fight scene in "The Dangerous Crowd" will surpass any that has ever been presented on the screen in this city.

The story starts with a real Wild West Rodeo and plenty of action. Thomson brings his athletic ability into play by competing against the pick of the cowboys, showing great versatility as a horseman and rop-er.

Hazel Keener plays the feminine lead and her actions at the prize fight, where she is dressed as a boy, are certain to make the house shake with laughter.

Silver King, Fred Thomson's wonder horse, proves that he is a real equine star and as deserving of credit as Thomson and Miss Keener.

The plot is an unusually strong one, with plenty of mystery and suspense. The cast is exceptionally good. Frank Hagney, who plays the role of the villain, is a noted boxer; in fact, two years ago he knocked out the now famous Firpo. Others in the cast are Al Kauffman, Lillian Adrian, Jim Corey, Andrew Arbuckle and David Kieley. Albert Rogell directed this picture, the scenario and story being written by Marion Jackson.

NEW EXPLOSIVE FOR FARM USE

The new war explosive Pyrofol will be distributed in Oregon this fall by the O. A. C. extension service. Complete details of cost and method of distribution will be announced soon, says George W. Kable, agricultural engineer. It is similar to sodalok, almost a million pounds of which have been used by Oregon farmers. The average cost of sodalok as reported by the thirteen agencies co-operating with the extension service in distribution, was \$7.77 per hundred pounds laid down.

Only two complaints of the quality of sodalok reached Mr. Kable, who directed the distribution. One of these was where the explosive became wet and would not explode. Two cases of stock poisoning were reported, both due to careless handling. No accidents were reported.

The charge of 75 cents a hundred to cover actual handling proved too great and the extension service is refunding twenty six cents a hundred, totaling \$25.16 to the 2691 farmers who used the material. Washington County used 246,950 pounds of sodalok last year, more than any other county in the state. It was distributed through O. T. McWhorter, the county agent.

COPPER CARBONATE DUST POPULAR SMUT REMEDY

Copper carbonate dust for wheat smut control, introduced into Oregon by the experiment station and carried to the farm by specialists and county agents of the extension service, is past the experimental stage and is fast coming into general use. Wheat for 500,000 acres was dusted last year, and enough for a half million acres will be for next year's crop, according to E. R. Jackman, extension specialist.

A saving of one-fourth of the seed is one big advantage of the dust treatment. This will save about 350,000 bushels

annually, \$350,000 or more this year in the growers' pockets. The seed germinates more surely and quickly and the plants are more vigorous from the start. Low cost of treatment, keeping a few of treated grain and effective smut control are other big advantages.

Failure of growers to allow for the added thickness of stand by reducing amount of seed sown caused too thick stands in some fields, a fault particularly noticeable this year because of unusual drought. The better germination of the dust method justifies reducing the common rates of seeding from 60 to 75 pounds per acre to 45 to 55 pounds.

Control of smut has been shown by field and nursery tests to be about the same with the dust rightly applied as with the liquid bluestone treatment. Every grain must be dusted, which is best accomplished by running the machine at the prescribed speed according to directions. When run too fast the machine holds the grain against the drum instead of tumbling it over the baffle boards to get its share of dust.

Two ounces of fine, good quality copper carbonate dust to each bushel of clean grain or three ounces for badly smutted grain are recommended by the experiment station. The wheat is re-cleaned and smut balls removed before treatment. Care is taken not to breathe the dust either in treating or sowing the grain.

CERTIFIED SEED FOUND FOR WINTER WHEAT

About 150 acres of White Winter wheat in Washington, Clackamas, Benton, Polk and Marion counties have recently been certified as pure by the O. A. C. extension service, subject to later examination of threshed samples, and will be available for seed this fall. This variety, along with Rink, was recommended as best for fall sowing in the western Oregon wheat growing areas by the state economic conference.

Of the many high yields reported from western Oregon and Washington that of B. O. Case and Son, Ridgefield, Washington, averaging 60 bushels per acre, was best. The seed was obtained from the Oregon station.

The farm crops report of the economic conference noted that Oregon is now producing commercially 63 varieties of wheat, whereas 12 varieties are enough for all Oregon's requirements. Seed certification by the college is designed to extend the

use of the few highest yielding standard varieties, to increase average yields and cut down losses from mixtures. Wheat is not certified if it contains more than one-half of one per cent of wheats of different color and texture, or rye or noxious weed seeds. Serious smutting disease for which there is no practical treatment disqualifies.

Of the 29,006,934 bushels of wheat received in 1923 in Portland 9.9% or 2,863,361 bushels graded as mixed. Much of the wheat from Willamette valley fall in that class, according to grain dealers, and suffers, of course.

Losses from smaller yields of inferior qualities and deduction because of mixture total about \$200,000 a year in Oregon, believes E. R. Jackman, farm crops specialist for the O. A. C. extension service, who does the most of the certification work. While such losses can never be completely eliminated, Mr. Jackman thinks they can be so reduced as to be negligible. He points to the fact that grain dealers a few years ago figured the loss to growers from mixtures at \$25,000 annually in one county alone. Growing very few different varieties and annually using large quantities of certified seed have virtually eliminated mixture losses in that county.

One-crop farmers using irrigation water all need it at once, whereas diversified crops in suitable rotations in one community permit a more even distribution of water throughout the irrigation season. An increase of 50 per cent in crop production through rotation is made on the experiment station farms at Corvallis where the oldest experimental plots in Oregon are maintained.

More vetch and oats or barley on heavy, rather poorly drained soils of western Oregon dairy farms would pay well for silage. The combination outfields corn nearly two to one and almost equals sunflower in yield while far surpassing it in palatability. The average yield of vetch and oats on the experiment station heavy lands from 1914 to 1921 was 12.7 tons per acre.

The young clover and grass in the limed plots of the experiment stations passed more successfully through the recent dry season than the unlimed plots, says R. E. Stephenson of the experiment station. The scientific explanation of this is that the lime makes the soils more mellow or that it provides a means of allowing the soil to hold more moisture. In such a season as the last this is an important feature of crop farming.

SULPHUR IS BEST TO CLEAR UP UGLY, BROKEN OUT SKIN

Any breaking out or skin irritation on face, neck or body is overcome quickest by applying Mentho-Sulphur, says a noted skin specialist. Because of its germ destroying properties, nothing has ever been found to take the place of this sulphur preparation that instantly brings ease from the itching, burning and irritation.
Mentho-Sulphur heals eczema right up, leaving the skin clear and smooth. It seldom fails to relieve the torment of disfigurement. A little jar of Rowles Mentho-Sulphur may be obtained at any drug store. It is used like cold cream.

WANTED and FOR SALE

For Sale—Large second hand heater, suitable for large warehouse or store room use, \$10.00 if taken soon. Beaverton Review. Adv c 1f

Wanted—Girl who wants home and opportunity to go to

HOLSUM BREAD
Temporarily good and healthful
Log Cabin Baking Co
Portland, Ore.

Since it is a necessity, most desirable, and will last a lifetime, —isn't it thoughtless not to get it NOW instead of later?

A "Standard" Modern Bathroom should be considered in exactly that way. You will not question that a sanitary bathroom is a necessity, so considered by all who have regard for cleanliness and refinement. The fixtures are guaranteed for a definite number of years and there is no reason for thinking that they will not last a great while longer; is it not then a matter of economy to get the equipment at once.

An estimate on such equipment, correctly installed with first class workmanship, will be given upon request.

U.S. Royal Cords
BALLOON ~ BALLOON-TYPE ~ HIGH PRESSURE
Built of Latex-treated Cords

TIRE building took a big step forward when the makers of United States Tires invented the Latex Process.

The added strength and wearing quality given by Latex-treated cords is something that the user of Royal Cords can tell you about from his own experience.

Royal Cords are the standard of value in cord tire equipment—even more certainly today than ever before.

And this holds good whether you are considering a High-Pressure Tire, a Balloon-Type Tire to fit your present wheels and rims, or a Balloon Tire for a 20 or 21 inch wheel.

United States Tires are Good Tires
