Provide comfortable, sanitary surroundings, keep the house free from drafts, give the birds clean, wholesome feed, and you have reduced the disease problem to a minimum.

Range and exercise for the breeding stock in Oregon are especially important factors in the production of eggs of high fertility and hatchability.

Alfalfa which yields as much as six tons or more per season, uses nearly five hundred pounds of limestone per season. That is, this legume uses nearly as much lime as nitrogen. The nitrogen comes from the air and when there is no inoculation to make this possible, the crop fails.

The Power Behind The Savings Dollar

By WILLIAM E. KNOX
President American Bankers Association

A recent compilation made by the Savings Bank Division of the American Bankers Association showed that

in the six years since the war our total savings deposits have risen from \$11,600,000,000 to nearly \$21,000,000,000, an increase of some \$9,400,000,000. The total number of savings depositors is reported at about 35,900,000.

The full significance of this is realized only when we visualize savings deposits as meaning much more than merely dollars in the banks. They really mean an increase in the accumulated productive capital of the country, since money deposited in the banks as savings is promptly applied by the bankers in the purchase of securities by which plant, railroad and other industrial development is made possible. These figures mean, therefore, that the small savings of many millions of people, instead of being frittered away in the purchase of goods that are immediately consumed which involves a destruction of capital, are gathered together and applied in the better utilization of capital through the upbuilding of industrial equipment. This means the preservation and perpetuation of the country's physical wealth and its application to the production of further wealth more easily and in larger volume, resulting in a higher standard of living for all classes in the country.

These tremendous savings figures indicate sound habits of thought and practice on the part of millions of people in their personal economic affairs. This is an asset of no small value in appraising our present business outlook. It is, in fact, one of the most promising elements in the situation today. It means that we not only have the resources for prosperity, but also enough common sense to make good use of them.

FORCING LOWER TAXES

Gerard B. Winston, Undersecretary of the Treasury in the American Bankers Association Journal says: "The burden of taxes must be lightened. Per capita Federal taxes rose from \$32 in 1915 to \$54 in 1920; then commenced to drop, and have been successively \$45, \$32, \$25, \$29 in the last four fiscal years. It is estimated that for the next fiscal year the figure will be about \$27. With the states and municipalities the opposite tendency is disclosed. In 1915 the per capita tax was something over \$20. In the next four years it rose to \$27, \$30, \$35, \$38, and later figures will undoubtedly show further increases."

He says of excessive death taxes that "examples have been cited of how the states and Federal government, under existing laws, can take more than 100 per cent of an estate if Federal and state governments take more than the particular source of taxation can stand. It will ultimately destroy all revenue from that source. After a man has provided for the reasonable requirements of living, the impetus to further production is largely the desire to leave one's family well provided for. So long as the individual feels that he can pay the tax and still leave an estate to his family, he will increase his efforts; but a man will not seek to build up large fortunes just to have it taken away from his family at his death."

Comedy—"Should Husbands Be Watched?"

Part Ten—"The Oregon Trail"

MAKING FRIENDS
The happiest business in the world

Is that of making friends. No investment on "the street" Pays larger dividends; For life is more than stocks and bonds;

And love than rate per cent; And he who gives in friendship's name Shall reap as he has spent.

HELPFUL FACTS
Marriage and other Crime Statistics of this County for 1924.—Flagstaff (Arizona) Sup.

FEW FARMERS USE ELECTRICITY

Only one farm in ten in Oregon is equipped for electric or gas service. Figures recently studied show that of the 50,206 farms in the state, only 5,463, or 10.9 per cent, make use of electricity and gas, and of this number 5,250 received central station service.

While the number of Oregon farms having gas and electricity is somewhat above the figure for the United States, it is comparatively low when it is placed alongside the fact that 50.5 per cent of the farms have telephone service and 71.2 per cent have automobiles. It gives rise to speculation as to whether the farmer is content to sacrifice greater comfort and convenience made possible by electricity and gas in favor of rapid communication and transportation that the telephone and auto make possible.

purposes, the farmer with this power at his command has been able to be relieved of many of the tasks around the home place. Electricity does not only pump water for the home, drive the washing machine, run the vacuum cleaner, heat the electric iron, charge the radio and automobile batteries, but it has brought efficiency with it by lighting the yard, stables and lofts, drive the milking machine, the cream separator, the churn, the grindstone and emery wheel and the general utility motor. Electricity has also been used to light poultry houses as a stimulant to egg production, to operate incubator ventilation and controls, and occasionally for grinding feed, sawing wood, as well as hoisting hay and grain.
