**Community
Building**

**Paint Surest Weapon
Against Rot and Rust**
Home is man's dearest possession.
He who owns even the humblest of
dwellings owes it two precious gifts—
protection and beauty.
As a man of business he will not will-
ingly see his property deteriorate. As a
reputable citizen and head of a family
he will wish his home to present an
attractive appearance and to be an
asset—not a disgrace—to the community
in which he lives.

Every house is beset by two in-
evitable enemies, which never take a
vacation. These are rot and rust. For-
tunately, they leave their fingerprints
as they go about their ugly task of
destruction.
The fingerprints of rot are most
easily found on such places as window-
sashes, door-sills and the like; in
fact, on any woodwork that is exposed
to the ravages of the weather.
Cellar stairs and windows are an-
other salient point of attack by rot,
because of the dampness to which they
are exposed; while the deadly fangs
of rust gnaw at the iron window
gratings and the furnace door.
Paint is the surest weapon against
these twin foes. By forming a water-
proof film over structural materials, it
keeps out moisture, and thus prevents
rot from sending its fungus spores into
cracks and crevices and porous sur-
faces. In like manner it checks the
chemical action of the air upon ex-
posed metals, which results in rust.

**Clean Up Grounds
to Add to Beauty**

If there is a garage, it should be lo-
cated where it will be of most con-
venience, and will not be unsightly.
The same thing is true of a driveway,
and of a service yard, for drying
clothes. Space should be allowed for
a lawn where children may play. If
it is possible, space should be reserved
for vegetable and flower gardens.
If the house is to be built, it is most
important to start with a good lay-
out in which these desirable points
are met as far as possible. Stand-
ing trees should be protected from
injury during the construction of the
house. As the excavation gets under
way, the top soil should be collected
and retained in one place, then spread
over the surface of the lot evenly,
after building is completed and the
lot has been finally graded.

If a finished house is bought as a
home for the family, it is well to
bear in mind that a great change for
the better usually can be brought
about by cleaning up the grounds
around the house and at the borders,
screening the back steps and improv-
ing their usual unsightliness with a
trellis, planting vines to grow on the
fences—if there are any—and plant-
ing flowers.

**Suspensions About Wall Street
and How They Arise**

By FRANCIS H. SIBSON, President
Trust Company Division, American Bankers Association

WOULD-BE economists, political orators and the general
public make frequent positive assertions about the func-
tions of Wall Street without any realization of what constitutes
Wall Street or what purpose it serves. Lack
of knowledge breeds suspicion. Yet it is not
difficult to understand the nature and func-
tion of Wall Street. Let us set down a few of
the facts which account for the existence and
nation-wide, as well as international, services of
Wall Street.

There are 316 banks in New York with
combined capital and surplus of about \$1,400-
000,000. Their deposits aggregate over \$11-
500,000,000, and during 1924 their total volume
of business reached nearly \$250,000,000,000.
The New York Stock Exchange in 1925 sold
463,000,000 shares of stock and in 1924 \$3,828,000,000 worth
of bonds. Wall Street is the national credit and money market.
It is just as essential that there be markets for money and for

stocks, bonds, mortgages and other
securities as for cotton, corn, tobacco,
wheat, hogs and other commodities.
If Wall Street Were Destroyed
Wall Street is the natural evolution
of the forces of trade and finance. It
exists because there is imperative
need for it in the nation's business.
If some cataclysm should destroy the
financial district of New York we
would see frantic efforts to re-estab-
lish it so that trade and industry
could continue. If the production and
marketing of agricultural and indus-
trial commodities did not need such
a financial institution, Wall Street
would not exist.

We depend upon the farmer to help
maintain the general level of pros-
perity. Wall Street as a money mar-
ket is called upon to finance the
growth and marketing of farm crops.
Many Wall Street bankers were born
and raised on farms. If they were
not thoroughly familiar with agricul-
tural requirements, they could not
hold their present positions in the
financial world.

In the period of deflation, Wall
Street suffered proportionately as
much as the farmer. The aggregate
losses of Wall Street banks mounted
to a staggering sum. Wall Street is
not an independent institution, but an
organic part of the country's business
system, necessarily reflecting the up-
and-downs of business.

Four Billion Dollars
An approximate estimate of the
main items in Wall Street's financial
operations in handling farm crops
shows that New York banks for the
purpose of agriculture put out com-
mercial loans to the value of one bil-
lion dollars, hold bankers' acceptances
for another billion, buy commercial
paper such as cattle and sheep loans
for a third billion and carry balances
of country banks for a fourth billion.
Thus Wall Street furnishes a \$4,000-
000,000 river of credit annually to pro-
duce farm products and boat them to
market.

The outward flow to rural banks
enables them to make the required
advances on farm crops and for ware-
housing and handling cotton, tobacco,
wheat, raisins, prunes and countless
other products. Outside of his own
personal efforts on his farm, Wall
Street is the biggest single factor in
the prosperity of the farmer. After
these commodities have been moved
to market, the money used in handling
them returns to Wall Street for in-
vestment. New York is the largest
security market in the country and
offers a use and market for the idle
capital of the rural banks between
crops.

Funds from every part of the coun-
try flow to New York, attracted by the
greater opportunity for their profitable
use found in this center. Thus the
accumulations of deposits are large,
and in turn the openings for the
useful employment of these funds in

the facilitation of trade, industry and
investment are upon a correspond-
ingly ample scale. It is clear that
these funds must be employed sanely,
constructively and to the real service
of the business community. Other-
wise they would inevitably soon be
withdrawn.

Huge Investments Help Farmers
These huge investment operations in
Wall Street are of significance to the
farmer. Much of the \$10,000,000,000
invested in farm mortgages was ad-
vanced by Eastern financial institu-
tions. In no sense is Wall Street's
interest in agriculture local or sectional.
The main function of New York
financial institutions is to send
money where it is most needed.

Another service rendered to agricul-
ture by Wall Street is the purchase
of Farm Loan bonds, Joint Stock
Land Bank bonds and the debentures
of the Intermediate Credit Banks.
There is a total of \$1,431,000,000 of
this paper outstanding, of which New
York banks took about one billion.
Wall Street loans to country banks
are made at low rates, usually below
4 1/2 per cent. The local banker's
rates to his customers are adjusted to
local conditions, which cannot justly
be laid at the door of Wall Street.

General financial service to other
industries related to agriculture also
helps the farmer substantially. Wall
Street loans to the packers, railroads,
millers and farm-machinery manufac-
urers to help them serve agriculture.
Wall Street is as necessary and
serviceable in the handling of credit
and capital as is the cold-storage plant
in caring for seasonal perishable prod-
ucts. The necessity of such a credit
center in a country with a \$60,000-
000,000 annual business is obvious.

What the People Want
Every great international bank in
New York maintains close relations
with thousands of other banks in the
United States and in every foreign
country of any importance. The
movements of commerce and invest-
ment are supported upon this inter-
related system of domestic and for-
eign banks. Thus it comes about that
the products of the farm, factory and
mine are financed by those banks all
the way from the producer to the
foreign consumer.

Wall Street in the discharge of its
true functions as the nation's reser-
voir of capital and credit includes the
whole business community in its field
of operations. Its control lies with
the people. Their demands govern
it, and their presence or absence from
the market determines its trends.
Wall Street prospers as farming and
industry prosper. Its service is to the
people of the whole country and for
them, to the people of other countries.
It is the direct reflection of American
agriculture, industry and commerce—

Catarrah Deafness
is often caused by an inflamed condi-
tion of the mucous lining of the
Eustachian Tube. When this tube is
inflamed you have a rumbling sound
or imperfect hearing. Unless the
inflammation can be reduced, your
hearing may be destroyed forever.
HALL'S CATARRH MEDICINE will
do what we claim for it—rid your sys-
tem of Catarrh or Deafness caused
by Catarrh.
Sold by all druggists for over 40 years.

blows—count on
PARABASE**

IT'S that last final effort that makes the touch-down.
And it's the last few miles of lubrication that make
the difference between a sound motor and trouble.
Parabase was made to do a little better than you
would expect from a good motor oil—to lubricate
all the miles that it should—and a few more.
Parabase does not break down in the motor quickly
under stress and heat. It stands up. It is your insur-
ance that at the end of the run your motor will be
as sound as when you started.
Drain your crank-case every thousand miles. Fill up
with Parabase. Remember, "It's the end of the run
that counts."
