It is understood Mrs. Daily's brother and family will live on the Schulte ranch.

New Violet Ray Gasoline Is Being Sold By General Dealers

The fall season for debutantes in the automotive world at least, was opened officially last week by the H. M. Barnes Distributing Co. with one of the greatest "coming out" parties ever staged here.

"In every town from Canada down," General independent dealers to the number of more than thirty five hundred united in presenting to the motoring public Violet Ray Gasoline—an improved type of anti-knock fuel with many distinctive features.

Because of the fact that this new violet colored product is displacing all other General Gasoline in more than 5,000 pumps, the General Petroleum Corporation is sponsoring in four great states an elaborate program of newspaper, billboard and radio advertising to acquaint the public with its reasons for this important forward step.

The magazine sections of all Sunday newspapers are being used for the first time in the history of oil company advertising on the Pacific Coast. And this program is being supported by a series of weekly radio entertainments over the National Broadcasting Company's network, on Friday nights at 8 o'clock.

Violet Ray Gasoline, its products, announce, represents months of research and experiment, both in the laboratory and on the road. The sole object of this study was to produce a balanced motor fuel which would fulfill all the requirements of high compression type engines, as well as function perfectly in all other types of motors.

The result is a vitalized, high-efficiency gasoline that is made without the addition of compounds and which gives Pacific Coast motorists a perfectly balanced, quick starting fuel that is destined to surpass in success the original General which was introduced a few years ago.

In order to make this new gasoline distinctive and immediately recognizable, General Petroleum chemists have given it a violet color, of a shade so delicate that it will retain its true tone only in a perfectly pure solution. Protected by this color, the motorist who uses Violet Ray Gasoline is insured against obtaining inferior motor fuel, since the presence of any acids, bases or salts which would harm his car also would tend to destroy the delicate distinctive shade of this new gasoline.
