

Beaverton Review

Issued Every Friday at Beaverton, Oregon, —By—

THE REVIEW PUBLISHING CO.

J. H. Hulett .. Business Manager

Entered as second class matter December 9, 1922, at the postoffice at Beaverton, Oregon, under the Act of March 3, 1879.

FRIDAY, MARCH 29, 1929

When we write the truth it isn't so necessary to keep a carbon copy.

The fellow who wants to begin at the top should become a well grinder.

A hypocrite is one who pretends to be a person whom he knows is lying.

Looks as though some husbands, also, may have been picked out in a blindfold test.

Eskimo songs reaching this country by wireless are said to be almost as bad as our own.

Chinese girls should have no difficulty in learning stenography, there being no spelling in that language.

Doctors declare that fasting for 15 days will restore one's basic metabolic rate. If you care for that sort of thing.

A loaf of bread 60 feet long was baked in Minneapolis. In such a case half a loaf would be 30 feet better than none.

Golfer is said to be becoming more prevalent among young women. Perhaps another argument against necking parties.

Lady Astor says Americans do not understand Europeans. She might have added that Americans do not understand each other.

Praising the town ladies for having the cemetery cleaned up, an exchange declares that "the graveyard looks most inviting."

Some of our friends are such good fellows that we can almost forgive them for having such foolish notions about religion and politics.

An editor gives many an idea from his paper. Most frequently it is the idea that he'd like to shoot the suggestion.

Johnson Wright of Missouri bequeathed 120 acres of land to the Almighty, who was designated in the deed as the "party of the second part."

A Maine woman, 106 years old, attributes her long life to the fact that she has always minded her own business. Reformers will say she has paid a terrible price.

20TH CENTURY STUFF NOVEL

"You'd oughta read the book I been readin' Mame. Gee! It's livin' and more lovin' and how! Some guy wrote it. I don't know his name. Anyway, what does? He sure knows his onions and his necking all right."

"What's the name of the book? Gosh! I don't know. The hero—he has some kind of a funny name, and he was a duke or a prince or something out there in one of them places where they have the war. That don't matter. No one cares about the place anyway."

"But it's some book, all right. The girl—her name was Mame, too. Just like yours. Well! She starts eudding when she was twelve and by the time she goes to work, she's all squeezed outa shape. Then this hero comes along and he shows her that what she knows about neckin' parties is just spin-the-platter stuff and what he learned in college is 'a' plenty. Y'd oughta read it. I'll giv' it y'a after Jane and Mom has read it. You'll not be able to sleep for a week. Gosh! It's some I'll tell the world! Nothing like them dry old classics. Jest plain lovin'—and how!"

INTERESTING NOTES
Mosquitoes are more likely to bite persons with fair skins than those of dark complexion.

Women outnumber men by 14 to 1 on the island Tagawa, in the Pacific ocean.

Insects have been on the earth for 50,000,000 years, while the human race is only 500,000 years old.

There are 137 trees in the United States known to have medicinal value.

Magnets seven feet long are used on highway trucks in Dakota in an effort to clear highways of metal that might puncture tires.

A storage battery which weighs 39 tons drives the largest electric locomotive in the world.

Besides printing all the news of the east part of Washington County and vicinity, the Review prints pictures of the most interesting subjects from all over the country.

YOUNG MEN AND WOMEN WHO THINK CLEARLY THE GREATEST DEMAND OF AMERICAN BUSINESS

Bankers Association President Gives the Five Essentials of Sound Thinking in Business—Greater Opportunity Than Ever Before for Young People With Educational Training and Power to Analyze Problems.

By CRAIG B. HAZLEWOOD
President American Bankers Association

ONLY half a century ago Michael Pupin, a shepherd boy, guarded his flocks by night among the fields of Serbia. Thieves often lurked in the bordering cornfields awaiting an opportunity to make off with a part of the herd. Serbian boys were taught a method of signalling one another for warning and help. Each carried a knife with a long wooden handle which he would thrust deep into the ground and in case cattle thieves approached he would strike the wooden handle. The sound would be transmitted through the ground to other boys some distance away who could hear and interpret the message.

"Why is it," Pupin asked his mother, "that we can signal this way? Why is it the sound can be heard through the ground, but not through the air? Why is it the signals can be heard in the pasture land so much better than in the plowed fields?" The boy's mother could not answer his questions, nor could the village teacher. However, having an eager mind and great determination, the boy decided to go to America, where he might win an education and find out the answers to these and other perplexing questions. He had heard of conditions merely accepted as things without once questioning them just because they had always done them that way.

The Land of Education and Success
So a penniless immigrant boy from Serbia at the age of fifteen landed in New York in 1874 and, years later, having worked his way through Columbia University, concentrated the wonder and simplicity of his mind upon the problem of sound, which had puzzled him as a shepherd boy. The results of his thinking—what he has accomplished for the long distance telephone and for radio communication by his inventions—are known to the world over. "It during the past twenty-two years this company had been compelled to do without one invention of Michael Pupin," an official of the American Telephone and Telegraph Company once said, "and yet give the same service it is giving today it would have had to spend at least \$100,000,000 more than it has expended."

These inventions, in which millions of dollars of capital have been invested, were the result of the thinking of a mere country lad who had the simplicity to wonder, the determination to know and the power to apply what he learned. Stimulating the imagination and thinking is the greatest purpose of education. What American business needs more than anything else is young men and women to think—individuals who are not mentally anchored to tradition, who do not merely appropriate other people's ideas, but who are hard, purposeful thinkers, independent and unprejudiced, with the ability to concentrate and strike straight for the heart of a problem.

Business Needs Folk Who Think
America has astounded the world by its readiness in casting aside traditional viewpoints, disregarding traditional difficulties and pioneering new shortcuts formulas in the realm of business. Business is undergoing epochal changes.

Business problems are crowding in upon us so rapidly that the executive knows not where to look for adequate help or relief. With the enormous increase in size and intricacy of business affairs the problems have become so complicated and the mass of information necessary to their solution so great that the "days are not long enough." The demand for managerial and executive ability is rushing ahead the opportunity for young men and women who have the professional training and who develop genuine thinking power is greater than ever.

All business feels the same crying need for the men who see clearly and think conclusively. Wherever we look—manufacturing, wholesaling, retailing, banking, financing—new forces are at work. Vast movements are being set on foot and executives are seeking light upon perplexing problems daily.

Let us consider briefly the five essentials of a sound thinker. If I were looking for a young man of exceptional promise I should hope, first, to find in him the simplicity to wonder. Every great advancement in business has been made by men who dared to wonder, who had the courage to inquire into present procedure and who had the audacity to ask whether something that had been done a certain way for a long time might not be wrong. Although the history of America's progress from its very discovery to the present time has shown the value of an inquiring mind, there is still an inevitable tendency in most men to accept in a docile manner the opinions, methods, supposed facts, procedures and processes of the past. With due reverence to the effort, the spirit, the accomplishments of the past, let us make it our rule that everything be looked at with the clear questioning mind of the scientist.

WHAT'S NEW
A vending machine which delivers a lighted cigarette when a penny is dropped in the slot is the invention of a Brooklyn young man.

By a new process more than 11,000 cubic feet of gas can be produced from a ton of straw.

By automatically controlled electric heat it is possible to dry out green lumber in 48 hours without warping.

Refuse from sugar cane is now being made into synthetic lumber.

A new English army motorcycle is fitted with tractor wheels in the rear which enables it to travel on swampy ground and also climb steep grades.

A new all metal flying boat developed in Europe has 24 seats for passengers, is driven by four 2,000 horsepower engines and can make 120 miles an hour.
