A very pleasant session of the Kinton Ladies' Aid society was held

at the home of the secretary, Mrs. W. C. Hall, Wednesday afternoon. A comforter was worked on. At the business hour, three new members were added to the society. During the afternoon, a fine lunch was served by the hostess.

DAIRYING

(Continued from Editorial Page) largely, persistently, and profitably. Constitution is indicated by large, open, well distended nostrils, by well-sprung fore ribs, and deep heart girth, signifying room for large heart and lungs. Also by largeness of windpipe and breadth of chest.

A cow never produces a pound of milk from anything other than feed and water. Other things being equal the more feed a cow eats, the greater will be her yield in milk. Therefore it is essential that a cow have capacity, which is indicated by a large mouth, strong jaws, and a large abdomen, "denoting a good feeder." She must have a body that is deep and long, with well-sprung ribs far apart, and a wedge shaped conformation.

A good dairy cow must have what is known as "dairy temperament," which determines whether she is a worker or a loafer. This is indicated by a broad well-dished face and a large, bright, prominent, staring eye. A dairy cow should not put on too much fat along her back, and she must have wide, prominent hips. She must have good blood circulation for carrying food

nutrients from the digestive system to the udder, where these nutrients are converted into milk and butterfat. A good circulation is indicated by prominent veins on the udder and large, crooked, and elastic milk veins.

A good dairy cow must have ability, which gives her the power of manufacturing milk and butterfat efficiently. This is indicated by an udder of good quality texture that is long and broad, between thin, well-arched thighs. The udder also should hang high behind and should be carried well-forward.

I recommend bull circles or bull associations as the cheapest way and a good way to build up the quality of dairy cows in any community. The very best bulls available should be used for breeding. I most heartily endorse the work of cow-testing associations, for in these cow-testing associations complete records of the milk produced and the feed consumed are kept, thus enabling the farmer to market his unprofitable cows at the end of the cow-testing association year.

A chronic imbibor in a New England village was clinging to a lamp-post one Sunday morning when a stranger came along and addressed him. "Sir," inquired the stranger, "Can you tell me where the Second Presbyterian Church is?" "Mister," answered the weary one, "I don't even know where the first one is."

Save Oregon

from being sold for Taxes

Vote against Power Districts Constitutional Amendment

"Oregon cannot afford a new class of uncontrolled tax-spending political bodies, operating tax-exempt property in a hazardous business enterprise, at the risk of the already burdened tax-payers of the state."

(Statement of 191 Oregon citizens in official Voters' Pamphlet)

Six Jokers In The Amendment

- 1 District can be pieced together like a crazy quilt, out of patches of "territory, contiguous or otherwise, in one or more counties."
- 2 Districts can "levy taxes upon the taxable property of such districts," with no limit on the amount of taxes that may be levied.
- 3 Districts can "issue, sell and assume evidences of indebtedness," with no limit on the amount or kind of debts to be "issued" or "assumed."
- 4 Districts can take over and "assume" defaulted bonds of insolvent irrigation districts, and load these debts on to other property.
- 5 Districts can and must make up all losses in higher taxes, in higher water and electric rates, or both, without check or limitation.
- 6 Five directors can exercise all these autocratic powers, with all bars against extravagance and oppressive burdens removed.

You know how these things work

"The people know by bitter experience that no power to create new debt and levy new taxes has ever been left unexercised. No opportunity to enlarge the public payrolls by political organization, or no chance to raise and expend public money, has ever been neglected."

This is a constitutional Amendment

Outstanding features of the new Chevrolet 6-cylinder truck

To every man who buys trucks, there are certain features in the new 1½-ton Chevrolet that recommend it especially for modern hauling.

The rear axle is larger, heavier and more durable. The rear brakes are larger, and all four brakes are completely enclosed. Chevrolet's 50-horsepower valve-in-head six-cylinder engine combines modern performance with un-

excelled economy. Dual wheels, along with six truck-type cord tires, are optional equipment at slight extra cost. In addition, the new heavy-duty truck clutch, the 4-speed transmission and the heavier, stronger frame are factors of outstanding importance to the modern truck user.

Come in today and arrange for a demonstration of the new Chevrolet truck!
