Signers And Non-Signers To Report

Local Committeemen In Each District, To Gather Information

TO PUBLISH FIGURES

No Final Date For Filing of Applications Has Been Set

Records of hog production for 1932 and 1933 for both signers and non-signers of hog reduction contracts will be submitted to the Hog Control Board, according to word received at the county agent's office. This will mean additional work for the local committeemen as this information will be gathered in each district by the three local committeemen. Record of production figures submitted by each applicant will be published in the county allotment committee.

Questions asked every day at the county agent's office indicate that the way to figure the payments under the plan are still not clear to everyone. Each man's payment amounts to \$5 per head on 75% of his average number of pigs marketed from litters owned by the producer when farrowed during 1932 and 1933. The average may be easily figured by adding the total number of pigs marketed from such litters and dividing by two. Some men have misunderstood the term "average number of pigs during the two years" and have mistakenly figured 75% of the total for the two years.

Both litters farrowed in 1934 and pigs marketed from such litters must be reduced 25%. This means that the man who has had only one litter during the last two years would farrow no pigs at all during 1934, if he comes into the plan. In figuring one's quota, fractions of one-half or less are dropped but the next high whole number is taken when the fraction is over one-half. Thus the average litters during 1933 and 1932 for the man who has farrowed only one litter would be one-half. This would be dropped, leaving him with no litters at all for 1934. The man with only two litters during the two base years would have an average of one litter. A reduction of 25% leaves three-fourths of a litter. This being over one-half is considered as one litter.

No final date for filing applications for hog payments. The work of the local committeemen, and hence the expense of the county association, will be less however if everyone who is interested in the plan will get his application in as quickly as possible. Detailed information and the necessary papers may be had by coming to the county agent's office or by calling on the nearest local committeeman. Lists of the districts and committeemen for each district were published in the last issue of the county newspapers.

County Sportsmen To Build Holding Pen

Pheasants, Propagated by State Commission, to be Kept By Clubs

PROTECTION NEEDED

Thirty-Two Communities In State Have Holding Pens Now

The future supply of Chinese pheasants in this state, or any other state, depends upon artificial propagation, female protection, vermin extermination, and after-hunting-season liberation.

Judge O. N. Denney introduced the first Chinese pheasants in Oregon in 1882, and it was the most successful importation of a foreign game bird into any country in the history of the world. Oregon was the first state in the Union to enjoy an open season on Chinese pheasants. In years past Oregon has been propagating more pheasants in captivity than any other state, and now Oregon, through its State Game Commission, has originated a holding pen plan that in time will be known as the Oregon system.

Pheasant propagation in Oregon has advanced beyond the experimental stage, but on account of the room required the commission has been compelled to release too many birds before the opening of the hunting season. To remedy this situation the Game Commission has adopted as a part of its ten-year program, a holding pen plan in cooperation with sportsmen's organizations throughout the state. The commission furnishes the birds at weaning time and the feed, and the sportsmen's organizations construct their own pens and care for the birds until released.

It has been suggested that the hunting license be raised one dollar to make it possible for the commission to handle this situation, but this has met with disfavor. The same sportsmen, however, who opposed the raising of the license will cheerfully contribute his dollar toward the building of holding pens in his community, or donate several days labor. He does this because he sees where he is directly benefitted by an additional ten pheasants to every pheasant hen released after the close of the hunting season.

At the present time thirty-two communities have built holding pens in the state.

At a recent meeting of sportsmen in Hillsboro it was decided to construct a holding pen in Washington County. Ralph Easter of Hillsboro is chairman of the committee.
