The SNAPSHOT GUILD

A PICTURE A DAY—

Indoors... Outdoors... Wash-day... Birthday... family history is being made.

Not long ago a young friend of mine married. He is a camera like the rest of us, and he told

"My family history is going to be put in pictures. I plan to take at least one roll of pictures a week—any more whenever possible. Whenever we do anything—move to new house—go on a week-end trip plant flowers—celebrate a birthday or an anniversary—add a new member—whatever it is, the story will be told in pictures."

His plans go further than that, too. His picture record is to be kept in a handy, useful form. "There will be a new picture book for every year," he told me. "I plan to have the best shots enlarged, and mount the others contact size. Everything goes into the book, where we'll always be able to find it and recall— from our own snapshots—what we did in past days."

There, now, is an idea for all of us. In every family, things happen each day that we would like to remember. We buy new furniture, plant gardens, build a trellis for roses, put new screens on the back porch, take vacation trips. Children are born, grow up, change year by year. We change, too. And a true day-by-day picture-history of all our everyday activities, as well as activities not-so-everyday, would greatly enrich our memories in later years.

Let's make a mental note—make

Each family picture-book becomes more treasured as the years roll by.

It's a household ritual, and abide by it. "A picture a day keeps the family history up to date. And a complete picture-book each year keeps it permanently."

John van Gulder.

A Cornerstone for Lightning

At left: Owen D. Young, General Electric board chairman, personally drives the ceremonial pile.

Below: C. E. Wilson, G-E executive vice president, affixes "cornerstone" before driving.

Drawing shows model of the G-E fair building which will house 10,000,000-volt lightning discharges.

In proper obedience to both the earth and the heavens which will join forces to present one of the most spectacular shows of the coming New York World's Fair, officials of the General Electric Company recently altered precedent to fit facts. As construction on their fair building began on Flushing Meadows, Charles E. Wilson, executive vice president, affixed a cylindrical copper "cornerstone" to the base of the first pile. Owen D. Young, board chairman, climbed to the cab of the pile-driver and drove the dedicatory symbol 90 feet into the earth. In the finished structure, model of which is shown here, G-E will next year evoke 10-million-volt bolts of man-made lightning and hurl them the length of the building for the edification of fair visitors.
