Two miles and half from Bandon there is a tremendous deposit of the best clay for bricks. Underneath the upper soil is a gravel deposit containing much good paying black sand, with gold mixed; then begins the clay, and as prospected is over forty feet deep, and no end found yet. The RECORDER has taken occasion to speak of these great resources several times, and it is to be hoped that in the near future that an immense brick manufacturing establishment will be on the ground to convert the clay into wealth. As to the black sand mines, there are a number of methods now being tried out which it is hoped will be successful in saving the gold, and this means great wealth to the country.
