## Bring Smiles

New Post Toasties were perfected to overcome the defects of old-style corn flakes. And the hearty welcome they have received is ample proof that their superiority is recognized.

New Post Toasties have a self-developed, inner-flavor—the rich flavor of choice Indian corn. Try a handful dry—they're mighty good that way, and the test will prove that, unlike common flakes, they do not depend on cream and sugar for their palatability.

New Post Toasties do not "chaff" in the package, and they don't mush down in cream like common "corn flakes." The New Post Toasties are identified by tiny bubbles on each flake—produced by the quick, intense heat of the new process of manufacture, which also develops their wonderful new flavor.

Have your grocer send a package for tomorrow's breakfast.
