BANDON, OREGON

Canals in Sponges.

Most sponges have a canal system, and there is a continual current of sea water passing through it, always flowing in the same direction. The water is made to flow in that way by a series of peculiar cells, the like of which has not been found in any of the higher animals. The sponges depend entirely for their life on this water current.

WHY TRAVEL?

When you can transact your business and close your deal by "Long Distance."

Today most of the important deals are closed by Long Distance, thus saving the usual heavy hotel and railroad expense.

The Coos and Curry furnishes unequaled Long Distance service to all points in the United States.

Coos & Curry Telephone Co.
Service First

FORD
THE UNIVERSAL CAR

Ford Owners Attention

We carry a Full Stock of PARTS and have the necessary equipment and mechanics to keep your car in good running order at the least expense.

AMERICANS FIGHT GERMS IN ITALY

Tuberculosis Experts Sent by Red Cross Will Use Latest Methods.

Included in the unit of medical and lay workers which the American Red Cross has sent to Italy are a number of the leading anti-tuberculosis workers of the country, sponsored by the National Tuberculosis Association. Dr. William Charles White, who heads the unit, is medical director of the Tuberculosis League of Pittsburgh, and Dr. Robert H. Bishop, the assistant director, is secretary of the Anti-Tuberculosis League of Cleveland as well as health commissioner of that city. Dr. John H. Lowman of Cleveland, a former president of the National Association, is another prominent member of the unit. Others are Dr. Robert G. Patterson, secretary of the Ohio Tuberculosis Association; Seymour H. Stone, until recently secretary of the Massachusetts Anti-Tuberculosis League; Dr. Gertrude Sturgis, secretary of the New York City Association of Tuberculosis Clinics, and N. A. Nelson, superintendent of the Cincinnati Anti-Tuberculosis League.

These men and women, at the request of the Italian government, will co-operate with that country in applying the latest approved American methods for combating the spread of tuberculosis. Some of them will be charged with the establishment of clinics where people of all ages may be examined and treated; others will devote their attention particularly to preventing tuberculosis among children, and a third group will develop health publicity and education.

It is to the credit of the anti-tuberculosis campaign in America that it has produced specialists of such international standing that Italy wishes to call them into her service temporarily. But the campaign will be continued unremittently here at home. Its support during the ensuing year will be derived not as heretofore from the sale of Red Cross Christmas Seals, but by a special appropriation made by the Red Cross to the National Tuberculosis Association. Tuberculosis workers on their side will line up with the Red Cross in its Christmas Roll Call for universal membership.

One Explanation.

"Some men," said Uncle Eben, "keeps bad company because dat's de only way dey kin feel a sense of superiority."

Uncle Eben.

"Some men," said Uncle Eben, "worries so much about nuffin' dat it seems almost a favor to give 'em a little regular trouble."

ADVICE TO "FLU" CONVALESCENTS

SPAIN AND ENGLAND REPORT INCREASE IN TUBERCULOSIS AFTER INFLUENZA EPIDEMIC.

U. S. Public Health Service Warns Public Against Tuberculosis. One Million Cases Tuberculosis in United States—Each a Source of Danger.

Influenza Convalescents Should Have Lungs Examined—Colds Which Hang On Often Beginning of Tuberculosis. No Cause for Alarm if Tuberculosis is Recognized Early—Patent Medicines Not to Be Trusted.

★ Beware tuberculosis after influenza. No need to worry if you take precautions in time.
★ Don't diagnose your own condition. Have your doctor examine your lungs several times at monthly intervals. Build up your strength with right living, good food and plenty of fresh air.
★ Don't waste money on patent medicines advertised to cure tuberculosis.
★ Become a fresh-air crank and enjoy life.

Washington, D. C. (Special)—According to a report made to the United States Public Health Service, the epidemic of influenza in Spain has already caused an increase in the prevalence and deaths from pulmonary tuberculosis. A similar association between influenza and tuberculosis was recently made by Sir Arthur Newsholme, the chief medical officer of the English public health service, in his analysis of the tuberculosis death rate in England.

In order that the people of the United States may profit by the experience of other countries Surgeon General Rupert Blue of the United States Public Health Service has just issued a warning emphasizing the need of special precautions at the present time. "Experience seems to indicate," says the Surgeon General, "that persons whose resistance has been weakened by an attack of influenza are peculiarly susceptible to tuberculosis. With millions of its people recently affected with influenza this country now offers conditions favoring the spread of tuberculosis."

One Million Consumptives in the United States.

"Then you consider this a serious menace?" was asked. "In my opinion it is, though I hasten to add it is distinctly one against which the people can guard. So far as one can estimate there are at present about one million cases of tuberculosis in the United States. There is unfortunately no complete census available to show exactly the number of tuberculous persons in each state despite the fact that most of the states have made the disease reportable. In New York city, where reporting has been in force for many years, over 35,000 cases of tuberculosis are registered with the Department of Health. Those familiar with the situation believe that the addition of unrecognized and unreported cases would make the number nearer 50,000. The very careful health survey conducted during the past two years in Framingham, Mass., revealed 200 cases of tuberculosis in a population of approximately 15,000. If these proportions hold true for the United States as a whole they would indicate that about one in every hundred persons is tuberculous. Each of these constitutes a source of danger to be guarded against."

What to Do.

In his statement to the public Surgeon General Blue points out how those who have had influenza should protect themselves against tuberculosis. "All who have recovered from influenza," says the Surgeon General, "should have their lungs carefully examined by a competent physician. In fact, it is desirable to have several examinations made a month apart. Such examinations cannot be made through the clothing nor can they be carried out in two or three minutes. If the lungs are found to be free from tuberculosis every effort should be made to keep them so. This can be done by right living, good food and plenty of fresh air."

Danger Signs.

The Surgeon General warned especially against certain danger signs, such as "decline" and "colds which hang on."

These, he explained, were often the beginning of tuberculosis. "If you do not get well promptly, if your cold seems to hang on or your health and strength decline, remember that these are often the early signs of tuberculosis. Place yourself at once under the care of a competent physician. Tuberculosis is curable in the early stages. Patent Medicines Dangerous in Tuberculosis."

"Above all do not trust in the misleading statements of unscrupulous patent medicine fakers. There is no specific medicine for the cure of tuberculosis. The money spent on such medicines is thrown away; it should be spent instead for good food and decent living."

WAR HAS HUMOROUS SIDE

Washington—Some extracts from letters received from soldiers or their wives by the War Risk Insurance Board follows:

She is staying at a disappated house. Previous to his departure we were married to a justice of the peace.

He was inducted into the surface. I have a 4-months old baby and he is my only support.

A lone woman and parsley dependent.

He was discharged on a goller and went home on it.

Owing to my condition which I haven't walked in three months for a broken leg which is \$75. I enclose lovingly yours.

I am left with a child 7 months old and she is a baby and can't walk.

In the service of the United States Army. He was my best supporter.

I received my insurance polish and have since moved my postoffice.

You ask for allotment number I have four boys and a girl.

I am his wife and only sir.

Please correct my name and I could and would not go under an consumed name.

I am writing in the Y. M. C. A. with a piano playing in my uniform.

Please return my marriage certificate, baby hasn't eaten in three days.

Now Mrs. Wilson I need help bad. See if the President can't help me. Both sides of our parents are old and poor.

Please send me a wife's form.

I have been in bed 13 years with one doctor and intend to try another.

Hello Mr. War Risk Insurance, how are you? I am well and hope you are too.

Dear Mr. Wilson, I have written to Mr. Headquarters and have received no reply and if I don't get one I am going to write to Uncle Sam himself.

I am a poor widow and all I have is in the front.

We have your letter. I am his grandmother and his grandfather and he was kept and bred up in this house according to your instructions.

I ain't received no pay since my husband has gone from no where.

You have changed my little girl a boy. Will that make any difference?

Tomato Teaches Lesson

"I not only grew a bigger and better tomato crop this year but am a better farmer for having studied the O. A. C. experiment station bulletin, 'Vegetation and reproduction with special reference to the tomato,' said a Corvallis truck grower.

The tomato has been forced to give up some of the important secrets of crop growth and production, which the intelligent farmer can take advantage of in maintaining the most profitable balance between carbohydrates and nitrates. Dr. E. J. Kruse and H. R. Kraybill are joint authors. Copies may be had for the asking.

"Careful study of the bulletin will benefit the farmer," says A. B. Cordley, station director.

Curry Bear Hunter

W. R. Coy the Euchre creek hunter who from one season to another probably kills more bear than any other man in the county, has bagged four bruin this fall and the season for them has hardly commenced. Mr. Coy does his hunting late in the fall when the bear get fat on acorn nuts, at times he gets as high as 15 gallons of grease from one animal. He likes the sport and scorns the use of a trap, always putting the bear up a tree with dogs. And no matter how far the dogs run they know that they will not be at the tree long before their master comes. It was dark, too late to see his game, when "Bill" arrived at the tree of one of the bear just killed. A fire on either side of the tree, however, kept the bruin aft until daylight disclosed his whereabouts. No matter how wild the storm, neither dog nor master shirks his part in the game.—Port Orford Tribune.

Limit on Use of Sugar Ends

County Food Administrator Liljeqvist has received from headquarters the following notice in regard to the sugar situation: Restrictions on the use of sugar are now removed. Consumers are not limited to their consumption; public eating houses are not restricted in the quantity that they may serve to the customers, the method of service is not regulated, and the dealers are permitted to sell the requirements to their customers without question.

The service of white bread is restricted to 2 ounces per person per meal, butter, 2½ ounces and the service of cheese also limited to ¼ an ounce per person per meal.

How Many Shingles?

To figure the number of shingles a house will require proceed as follows: Measure the length of the roof to be covered. Measure the distance from one eave over the peak to the other eave. These dimensions necessarily are in feet. Multiply the dimensions together. Divide by 100. The quotient will be the number of thousand shingles required. To determine the number of bundles, multiply this number by four.—Form Life.

The seriousness of one—the happiness in the obligation of the other

But both are badges of honor—one standing for exceptional valor on the battlefield—the other, for membership in the greatest of all humanitarian organizations, your American Red Cross.

The work of the soldier is practically finished.

The work of the Red Cross has really just begun. Your membership and the moral support such membership gives are essential in carrying on Red Cross activities.

Let us all realize that in our happiness of another Christmas of Peace and Plenty—let us not forget the sufferings and privations of our war-torn friends across the sea—let us make our Christmas festival a Red Cross Christmas with full membership in every American home.

Put your flag in your window—let your neighbors know you haven't forgotten Belgium—and France—and our boys who remain overseas.

Wear your Button

Will you be wearing your membership button when the boys come home?
