SOME TIMELY GARDEN NOTES

Hotbeds Should Be Watched Closely and Manure Carefully Prepared-Inspect All Implements

(By LE ROY CADY, Assistant Horticul-turist, University Farm, St. Paul, Minn.) Watch the hotbeds closely. Ventilate hotheds on the side away

om the wind if possible. Manure may be spread on the gar-den and plowed in this spring. Be sure the manure is heating even

ly before it is put in the frame. If hotbed manure does not heat readily put on a few buckets of hot Bank hotbeds with manure that is

not heating. Dry manure will not be so likely to freeze and take heat from When pruning, have a reason for every cut made and close to the limb

or trunk. Leave no stubs. Pruning may be done late in March. Cover all wounds over one-half inch in

diameter with white lead or grafting Seed for most early plants may be sown at this time. Transplant when large enough and keep growing nicely

till they are ready to set in the field. Inspect all garden tools, sharpen and put them into the best condition. Perhaps there are some new ones that should be purchased. Now is a good time. Look them up.
Grafting wax is made by melting to-

gether four pounds of resin, two pounds of beeswax and one pound of unsalted tallow. Heat this about fifteen or twenty minutes, then throw into cold water and pull in the same manner as molasses candy.

COMMON SENSE IN HOG LOT

Houses Used Should Be Isolated and Whenever Possible Portable Structures Employed.

It is a wise man who will give his hogs plenty of sunlight. It is not easy to do this in a large building, particu-

A Berkshire Sow and Her Litter. larly if it is made a part of any other

Hog houses ought to be isolated. better still, portable houses should be used whenever possible. Portable houses, mounted on runners, can be moved from one small clover or rape field to another, giving the pigs fresh pasturage and clean

quarters. Of course such pens 'are only for shelter and nesting purposes. The portable farrowing pen should have a place on every farm where two or more sows are kept. These are easily built by any farmer handy with tools, and should not cost over

three dollars. PROPER FEED FOR TURKEYS tached a numbered metal tag for tax-

When the Hen Begins to Set She Should Be Provided With Corn and and Wheat and Fresh Water.

(By C. M. SHULTZ.) When the turkey hen begins to sit, she should be provided with a dish of whole corn and wheat, given access to fresh water twice a day, and then must be left absolutely undisturbed. In order to get the best results, each turkey hen should have an individual pen where she can sit and eat and drink without being compelled to go

r be disturbed in any way.

If she is to be disturbed at all, it and 80 inches wide. or be disturbed in any way, Seventh week-Urge the boys to If she is to be disturbed at all, it clean up about the barn lot and teach is only to give her a thorough dusting with insect powder two or three times make compost. Teach the girls the during the sitting period, which covvalue of well rotted manure and enriching the soil where tomatoes are time the turkey hen sits very quietly, sometimes refusing to leave the nest for 36 hours at a time to get food or water. She should never be urged to leave the nest for this purpose or any ing prizes to be offered the boys for ways be within her reach at all times She knows best what she wants, and

CULLING THE POULTRY FLOCK

Hens Over Two or Three Years o Age, Badly Shaped Birds and Poor Lavers Are Unprofitable.

(By PROF, J. G. HALPIN, Wisconst The poultry flock should be culled during early summer, so as to take advantage of the comparatively good prices that prevail then. Hens over two or three years old, the small hens, the badly shaped ones with crow heads or crooked breasts, over fat hens, and hens known to be poor has passed the age of ten and en layers, should be sold. Not only will the price be lower later in the sea but the presence of these undesirable hens will reduce the efficiency of the driver and so forth, and though he entire flock. Then, after the flock has been culled, all the remaining hens should be given leg bands or otherwise marked so that they may later se distinguished from the pullets.

> Control of Black Knot. Black knot, a fungus disease of herries and plums, is controlled by cutting out and burning all evidences of the knot several times a year, and using bordeaux mixture once late in swell, and two or tures applications at intervals of ten days. The best time to find disease bunches is when he foliage is gone.

year. For this reason hens should then be marketed and younger ones substituted for them.

Let Uncle Try for Another.

The little Bratenahl boy visited his uncle, who lives away out in the country. Uncle is a devout man; a pillar of the church and a breeder of fine horses. And upon a certain pretty colt did our little friend cast his eye with admiration and covetousness.
"Uncle Samuel," he said, "will you

please give me that colt?"
"Why, no, Harold," answered the uncle. "I can't give you that colt. Do uncle. "I can't give you that colt. Do you want a colt very badly?" "I'd rather have a colt than any-thing in the world."

"Well, if you want a colt that much you ought to pray for it. When I want a thing very badly I pray for it and it comes to me."
"Houest, Uncle? Well, I'll tell you —you give me this colt and then you pray for another one,"—Cleveland Plain Dealer.
