PONIES FOR CHILDREN
Business of Raising Shetlands Has Grown Important.

More Patient Than Horse and is Better Tempered—Essential That Little Fellows Be Docile and Easily Handled.

The Shetland pony is always an object of interest, whether seen drawing a shining cart in the city park or bending beneath the cruel weight of his heavy burden on the mountain-tails of his native country. If he were less hardy he could not endure the severe labor he is made to perform in his native land, for there he is purely and simply a burden bearer. Grain, iron, furniture, coal, ore and merchandise of all kinds are transported to all parts of the islands on the backs of the tough little animals. Three hundred pounds is the usual load for each pony, and long lines of these laden little beasts wind in and out among the hills of their native land.

The genuine Shetland pony, produced from the pure breeds of the Shetland and Orkney Islands, has become so popular and useful that the business of raising ponies has grown important. The business is not so simple as it might appear at first glance. In the first place, the progenitors—sires and dams—are usually selected in the Shetland Islands. Occasionally desirable breeds may be found in the interior of some of the other northern islands bordering Scotland, but the majority are found in the Shetland Islands.

The Shetland pony is unlike the horse in many respects other than that of size. He is more patient, and as a class is better tempered. Mute under punishment, patient during severe labor, constant as a dog in friendship, combining marvelous intelligence with a tractable spirit, the Shetland pony is of all animals the best servant, companion and friend for children. There are grown persons who so admire the sturdy little ponies that they prefer a cart and pair to the best trotting horse. They make up in strength and endurance what they lack in size.

On farms where these ponies are raised for the market, kindness is practiced under all circumstances in their training. This is very important, because most of these animals in this country at least, are sold for the pleasure of young boys and girls and it is essential that they be trained to be docile and gentle. When the little pony colt, which a man can take up in his arms and carry about, is strong enough to run and play with its mother, a little halter is put on it, and it is taught to lead and start and stop at the word. When it grows stronger, but is not yet nearly full grown, a set of harness is fitted upon it, a smooth, easy bit is slipped into its mouth, and it is driven about with the lines. A very gentle pressure of the bit on the

tender mouth is sufficient to guide it. Later on it is hitched to a little cart, and trotted about until it becomes thoroughly bridle-wise—that is, until it becomes trained to turn about instantly without hesitation in response to the bit. It is taken close to puffing locomotives and alongside queer-looking vehicles; into the neighborhood of shops where there is the sound of clanging iron and pounding hammers and ringing bells. Its actions under all these conditions are carefully noted and recorded, and its special qualifications for particular purposes fully ascertained.

The trainer knows the natural propensities and acquired qualifications of every pony about the farm fully as well as the teacher knows those traits in a pupil, and all those things go to make up a pony's record.

DRAINAGE IS OF IMPORTANCE
Fruit Trees, Plants, Shrubs and Vines Will Not Thrive In Wet Soil—Keep Outlets Open.

Fruit farm drainage is even more important than draining for farm crops, as fruit plants, shrubs, vines and trees will not thrive in wet soil. The outlets of the drains need looking after several times each year to see that they do not get clogged. Sometimes the outlet tile, being exposed to winter frosts, crumbles causing a stoppage of the outlet.

GOOD FENCE OF MUCH VALUE
Nothing in Farm Work That Requires More Attention of Farmer—Make It Permanent.

To the farmer engaged in mixed farming there is nothing in his farm work that requires more attention than the keeping up of his fences. This should mean good fencing that has a permanency to it and at the same time serves the purpose of turning all kinds of stock that are tured into the fields.

INFERTILE EGGS KEEP BEST
Bad Practice to Permit Broody Hens Spoil Fertile Product—Germs Die Quickly.

If fertile eggs are incubated for 24 hours, then kept cool for three days, the germs will die, and these dead germs are the points where decomposition begins. Infertile eggs do not have these, and therefore keep better than fertile eggs. Don't permit broody hens to spoil fertile eggs.

EXTEND THE TOMATO SEASON
Gather All Large Specimens Before Vines Are Killed by Frost and Put on Bed of Straw.

The tomato season may be extended several weeks by gathering all the large tomatoes before the vines are killed by frost and putting them on a bed of dry straw. Put about ten bushels in each heap, cover with straw at night and when weather is cold and wet. The tomatoes will ripen gradually and will be nearly as good as those ripened on the vines. If frost threatens, pull up the vines with the tomatoes on the vines and pile in the field. This is the method followed by our truckers and market gardeners. Where only a few bushels are wanted, pick the largest and finest tomatoes and place them on a bed of straw in the cold frame, cover with a six-inch layer of straw. If rain threatens slide on the sash, as they should not get wet or they will rot.

Gather the ripe fruit for canning or preserving and make catsup while fruit is abundant. The small green tomatoes may be sold for pickling.

WIRE STRETCHER IS USEFUL
Implement Consists of Two Semicylindrical Sections Held Together by Bolts.

This device consists of two semicylindrical sections held together by bolts, and in proper position to each other by plates on the ends of each section, writes C. J. Lynde in Farmers' Mail and Breeze. In operation a half

cyliner is placed on each side of several wires and the bolts screwed up. A handle at right angles to the cylinder is inserted in one of the two holes in the middle, and the cylinder is turned. Another handle is inserted in the other hole and allowed to hold against an adjacent post. In case of one wire being slackier than the others, an extra curved plate (1) is placed on the cylinder to take up more wire in rotating. The edges of the two half cylinders are rounded to prevent cutting the wire.

WIRE FENCES AND LIGHTNING
Dangers to Live Stock Increased During Thunder Storms Unless Wires Are "Grounded."

Wire fences increase the dangers of live stock during thunder storms, unless the fences are carefully "grounded," say specialists at University farm, St. Paul. Such fences may be grounded by running a No. 8 or No. 10 galvanized iron wire from each strand of the fence into the ground. The wire should be twisted two or three times about each strand and should reach to a depth of four or five feet into the ground. If the soil is particularly dry the wire should be sunk much deeper. It should always reach down to moist soil. A crowbar may be used in making the holes. Projecting points above the fence will help to relieve the electric tension and prevent the lightning from striking. Field fences should be grounded every 20 rods, and fences about barnyards and feed lots every ten rods at least.

INJURED CORN FOR THE SILO
Where Crop Has Been Damaged by Drought It Should Be Cut and Stored for Feeding.

When corn is injured by the drought it should be allowed to stand as long as there is any hope at all of its getting rid to complete its growth. If it begins to die it should be put in the silo, as this means what feed value it contains will be saved. If it cannot be put into the silo just then it may be shocked and put in later, as tests have shown that shocked corn makes good silage.

SPRAYING FOR POTATO BUGS
Control Insects by Using Arsenate of Lead or Paris Green—Amount of Water to Add.

To control the potato bugs spray with arsenate of lead or paris green. If using paris green add one-half ounce or one heaping teaspoonful to each two gallons of water.

CLIPPING PASTURES IS BEST
Results in More and Better Grasses and Ripening of Weed Seeds Is Also Prevented.

Clipping pastures after harvest results in more and better grasses. The ripening of weed seeds is prevented and briars are removed, so that clover and blue grass may occupy the ground. Where a mowing machine cannot be used the scythe is brought into play.

WEEDS IN CATTLE PASTURES
Destroying Noxious Plants Is Job That Fits in Nicely After Rain When Soil Is Wet.

Cutting dock, mullein, thistles and poisonous weeds in the cattle pasture is a chore that fits in nicely after a rain, when the ground is wet. The task may not seem necessary until a cow is lost through poisoning, when it will be too late for prevention.

SAGE TEA BEAUTIFIES AND DARKENS HAIR
Don't Stay Gray! It Darkens So Naturally that Nobody can Tell.

You can turn gray, faded hair beautifully dark and lustrous almost overnight if you'll get a 50-cent bottle of "Wyeth's Sage and Sulphur Compound" at any drug store. Millions of bottles of this old famous Sage Tea Recipe, improved by the addition of other ingredients, are sold annually, says a well-known druggist here, because it darkens the hair so naturally and evenly that no one can tell it has been applied.

Those whose hair is turning gray become faded have a surprise awaiting them, because after one or two applications the gray hair vanishes and your locks become luxuriantly dark and beautiful.

By the Size of It.
A minister confided to his old friend that he was considering an invitation to another parish at a marked increase in salary.

"What I do not know for sure is that this is really a call."
"Call, domine? It's a command."—Christian Register.

Among the Latinists.
"What is the meaning of 'in medio tutissimam via?'"
"It means a middle course is safest. In other words, the middle man always gets his."—Exchange.

Sold.
A lady entered a store and asked to be shown some tablecloths. A salesman brought a pile, but none suited her.
"Haven't you something new?" she asked.
The clerk then brought another pile and showed her the newest pattern. He said, "You will notice that the edge runs right around the border and the center is in the middle."
"Isn't that lovely?" said the lady. "I will take half a dozen of those."—Life.

SALTS IF BACKACHE AND KIDNEYS HURT
Stop eating meat for a while if your Bladder is troubling you

When you wake up with backache and dull misery in the kidney region it generally means you have been eating too much meat. Put in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean and stimulate sluggish kidneys, also to neutralize acids in the urine so it no longer irritates, thus ending bladder weakness. It is a life saver for regular meat eaters. It is inexpensive, does not injure and makes a delightful, effervescent lithia-water drink.

ACID POISONING!
The most eminent physicians recognize that uric acid stored up in the system is the cause of gout and rheumatism, that this uric acid poison is present in the joints, muscles, or nerves. By experimenting and success at the Invalids Hotel and Surgical Institute in Buffalo, N. Y., Dr. Pierce discovered a combination of native remedies that he called An-u-ric, which drives out the uric acid from the system, and in this way the pain, swelling and inflammation subside. If you are a sufferer from rheumatism, backache, pains here or there, you can obtain An-u-ric, double strength, at any drug store and get relief from the pains and its brought about by uric acid; or send Dr. Pierce 10c for trial pkg. An-u-ric which you will find many times more potent than lithia and eliminates uric acid as hot water melts sugar. A short trial will convince you. Send a sample of your water to Dr. Pierce and it will be tested free of charge.

ACID POISONING!
An-u-ric is a regular insurance and life-saver for all big meat eaters and those who deposit lime-salts in their joints.

WOULD CONSERVE ALL STAPLE FOODS
Food Administrator Sees Solution of Problem of Feeding Allied Peoples.

URGES USE OF VEGETABLES
Increased Consumption of Those Things of Which Country Has Surplus Asked of Hotels and Individuals.

To aid individuals, as well as hotels and restaurants, in taking steps that will aid in solving the food problems which confront the country, Uncle Sam's food administration issued the following statement:
Our problem is to feed our allies this winter by sending them as much food as we can of the most concentrated nutritive value in the least shipping space. These foods are wheat, beef, pork, dairy products and sugar.
Our solution is to eat less of these and more of other foods of which we have an abundance, and to waste less of all foods.
Bread.—Serve breads or rolls made from corn, rye, or from mixed flours. Use breakfast food and hot cakes composed of corn, oatmeal, buckwheat, rice, or hominy. Under European plan, give individual service of bread and butter of uniform weight, rolls or slices to weigh not more than 1 1/2 ounces. Serve absolutely no toast as garniture or under meat, etc. Serve war bread. Do not serve bread and butter before the first course. People eat them without thought. Where a charge is made for bread, a higher charge should be made for white bread. If white bread is demanded, charge for it.
Meat.—Use more chicken, fish, hare, rabbit, duck, goose, lobster, oysters, clams, sea foods, and egg dishes of all kinds. Use less beef, mutton and pork. Serve smaller portions of these. Have fewer of these items on the menu. If you must include one of the three, use mutton in preference. Serve "per person" portions of these meats, of moderate size, and charge accordingly. War portions at reduced prices may be served. Provide more entrees and made dishes. Beans are most useful, as they contain nearly the same nutritive values as meat. Serve bacon only as a dish, not as a garniture. The service of fresh pork to guests and employees should be discouraged.

Milk.—Use it all. Economize on milk and cream except for children. Serve buttermilk. Serve cottage cheese regularly in varying forms; it is especially nutritious. Use skimmed milk in cooking. A great quantity of it goes to waste in the country. Use cheese generally. The children must have whole milk, therefore reduce use of cream.
Fats.—Serve as few fried dishes as possible so to save both butter and lard, and in any event use vegetable oils for frying—that is, olive oil, corn oil, cottonseed oil, vegetable oil compounds, etc. They are equally good. Serve all butter in standard pats for guests and employees. A butter-pat machine promotes economy. Trim all coarse fats from meats before cooking and sell the waste fats to the soap maker, thereby increasing supply of soap and glycerine. We are short of soap fats, as our supplies of tropical oils for soap making are much reduced. Do not waste soap.
How Sugar May Be Saved.
Sugar.—Use less candy and sweet drinks. Use honey, maple syrup, molasses and dark sirups with hot cakes and waffles in order to save butter and sugar. Use also all classes of fruit preserves, jellies, marmalades and jellies. Use brown sugar in cooking and economize by the use of granulated sugar on the table. Do not frost or ice cakes. Use honey for sweetening pastry and cakes.
Vegetables.—Use more vegetables and potatoes. Make fruits and vegetables into salads and attractive dishes. Feature vegetable dinners and vegetable salads of all kinds. Encourage the use of cheese with salads. We have a great surplus of vegetables and they can be used by substituting them for staples, so that the staples most needed will be saved.
General.—Use local and seasonal supplies. Do not require abnormal use of the railways to transport products from far afield, now that we need all cars possible for war purposes. All waste food should be saved to feed animals or for reduction to obtain the fats. No food should be burned. The encouragement of hors d'oeuvre of vegetable salads, fish, and sea food at the start of the meal, and of cheese, fruit, and coffee at its end, will save greatly in all staples and permit the effective use of many available foods. Reduce the number of courses served which contain the staples that must be saved for export. This means beef, pork products and wheat.
Table d'hotel service, unless very carefully supervised, results in waste in eating and preparation, and should be discouraged in larger hotels and restaurants wherever conditions will permit. In circumstances requiring table d'hotel meals, articles of food not required for export to our allies should be served. The American plan hotel or restaurant should require its guests to choose specifically in writing, from the items offered as in the European plan so as to avoid waste.

American Shoes for Jamaica.
The island of Jamaica offers an attractive market for American shoe manufacturers, as the products of the country, such as sugar, plantain, honey, coffee, cacao, and logwood are now selling at good prices and imported goods are more generally purchased than ever before, according to Uncle Sam's bureau of commerce.

It is a rather small market, however, for although the population of Jamaica is 500,000, the sale of imported shoes is restricted to about 100,000 of that number, which includes the 18,000 white persons on the island.

A Natural Fortification
If you catch colds easily, if troubled with catarrh, if subject to headaches, nervousness or listlessness, by all means start today to build your strength with

SCOTT'S EMULSION

which is a concentrated medicinal food and building-tonic to put power in the blood, strengthen the life forces and tone up the appetite. No alcohol in SCOTT'S.

Don't Merely Say Oatmeal—Say "FORCE"

CUTICURA KILLS DANDRUFF
The Cause of Dry, Thin and Falling Hair and Does It Quickly—Trial Free.

Pinpoint spots of dandruff, itching and irritation with Cuticura Ointment. Follow at once by a hot shampoo with Cuticura Soap. If a man, and next morning if a woman. When Dandruff goes the hair comes. Use Cuticura Soap daily for the toilet.
Free sample each by mail with Book. Address postcard, Cuticura, Dept. L, Boston. Sold everywhere.—Adv.

"Here's a substance which breaks down when exposed to light," remarked the chemist.
"That must be the stuff politicians are made of," observed the cynic.

He—Why did you let me make love to you if it was hopeless?
She—It didn't know it was hopeless until I'd seen your method of making love.—Boston Transcript.

Mrs. Knagg—You should stop fiddling away your time.
Knagg—And you harping on one string.—Boston Transcript.

It seems to be an unwritten law of business, made on the inside, that any increase in the cost of production shall be borne by the consumers; that the producers shall never yield any part of their profits.—Albany Journal.

I'd like to have a consulate And make a show, But with the world in such a state Where would I go?
Twas only a gray day as matters befell, For Wallaby's pay day was rent day as well.—Exchange.

Alert for the Future.
"You've got a lot of weeds in your garden."
"Pretty fine weeds, too, don't you think?" rejoined Mr. Crosslids.
"Surely you are not nursing them along!"
"Yes sir, I've been finding out that so many new things are edible that I'm holding out to see whether science don't discover some way of frying the jimson or stewing the burdock."—Washington Star.

NO RELIEF—Mrs. Brown Finally Cured by Lydia E. Pinkham's Vegetable Compound.

Cleveland, Ohio.—"For years I suffered so sometimes it seemed as though I could not stand it any longer. It was all in my lower organs. At times I could hardly walk, for if I stepped on a little stone I would almost faint. One day I did faint and my husband was sent for and the doctor came. I was taken to the hospital and stayed four weeks but when I came home I would faint just the same and had the same pains.

A friend who is a nurse asked me to try Lydia E. Pinkham's Vegetable Compound. I began taking it that very day for I was suffering a great deal. It has already done me more good than the hospital. To anyone who is suffering as I was my advice is to stop in the first drug-store and get a bottle of Lydia E. Pinkham's Vegetable Compound before you go home."—Mrs. W. C. Brown, 2844 W. 12th St., Cleveland, Ohio.

SUFFERING CATS! GIVE THEM THE GOLD MEDAL

No humbug! Any corn, whether hard, soft or between the toes, will loosen right up and lift out, without a particle of pain or soreness. This drug is called freeseone and is a compound of ether discovered by a Cincinnati man.
Ask at any drug store for a small bottle of freeseone, which will cost but a trifle, but is sufficient to rid one's feet of every corn or callous.
Put a few drops directly upon any tender, aching corn or callous. Instantly the soreness disappears and shortly the corn or callous will loosen and can be lifted off with the fingers. This drug freeseone doesn't eat out the corns or callouses but shrivels them without even irritating the surrounding skin.
Just think! No pain at all; no soreness or smarting when applying it on afterwards. If your druggist don't have freeseone have him order it for you.

VAUGHAN'S PORTABLE DRAG SAW
Cuts 20 Cords in 10 Hours
