**THIS IS THE CELEBRATED ANKER-HOLTH SELF-BALANCING CREAM SEPARATOR**

**What This Separator Will Do.**

It will increase your dairy profits 30 to 40 per cent if you are skimming your milk by the old hand method.  
**IT WILL SAVE TIME**, as the bowl, disc, and tinners can be thoroughly cleaned in five minutes.  
**IT WILL SAVE LABOR**, as it is the easiest running cream separator in the world.  
**IT WILL SAVE REPAIR EXPENSE**, because it has no mechanical parts that wear out.  
**IT IS THE ONLY SEPARATOR** where the skimmed milk is delivered from the top of the bowl and the cream from the bottom. No intermediate tank.  
**IT IS SELF-OILING**, and so clean and sanitary that it could even be placed in your parlor without disagreeable results.  
**IT IS BUILT WITH THE ACCURACY** of a watch and the strength of a motor.  
**THE ANKER-HOLTH SEPARATOR** WILL SKIM MORE CREAM OF A HIGHER QUALITY, that will make more butter, than any other cream separator on the market, and we have the power to sustain this statement.  
 We want you to know more about this great Cream Separator—Write for descriptive catalogue.  
**THE J. C. ROBINSON CO.**  
 44 First Street, Portland, Oregon

**The MAGIC MOP 98¢**  
 PARCEL POST PRICED SPECIAL  
 Lessen the Housewife's Burden.  
 No back-lashing. Thoroughly cleans  
 floors, walls, ceilings, and  
 fixtures. Full directions with each mop.

**Laugh When People Step On Your Feet**  
 Try this yourself then pass it along to others. It works!

**OUCH!** This kind of rough talk will be heard less here in town if people troubled with corns will follow the simple advice of this Cincinnati authority, who claims that a few drops of a drug called **Freezone** when applied to a tender, aching corn or hardened callous stops soreness at once, and soon the corn or callous dries up and lifts right off without pain.  
 He says **Freezone** dries irritations and never inflames or even irritates the surrounding skin. A small bottle of **Freezone** will cost very little at any drug store, but will positively remove every hard or soft corn or callous from one's feet. Millions of America's women will welcome this announcement since the inauguration of the high heels. If your druggist doesn't have **Freezone** tell him to order a small bottle for you.—Adv.

**A Sure Test.**  
 "I know the woman next door to you professes to be an earnest self-sacrificing Christian, but what proof have you of it?"  
 "She gave away her chickens when we planted our garden."—Baltimore American.

**Force of Habit.**  
 Sergeant (to soldier climbing out of trench)—"Hey, there, where are you going?"  
 Absent-minded fellow (coming to)—"Jimmy! When that bloomin' shell whistled overhead I thought it was 12 o'clock."—Exchange.

**Saved.**  
 Little Girl (to aunt, who is staying in the house on a visit)—"Are you going out, auntie? You've got a hole in your veil."  
 Aunt—"Have I? I'm afraid I haven't time to change it now."  
 Little Girl—"Oh, well, it's not a very big one—and, after all, I don't suppose anyone will notice you're my aunt."—Punch.

**Proud of It.**  
 "Your sensible friend may have no superabundance, but she is an old hen."  
 "Maybe she is, but she laid a ghost!"—Baltimore American.

# FARM ANIMALS

## TO PREVENT WORMS IN PIGS

Especially Important to Protect Newly Farrowed Animals From Intestinal Parasites.

(Prepared by the United States Department of Agriculture.)  
 Recent investigations have shown the importance of taking special precautions with newly farrowed pigs to prevent their becoming infested with intestinal worms. Intestinal worms are very common parasites among pigs, and cause a great deal of damage to the young animals. It appears that they become older pigs become less susceptible to infection. Accordingly, if pigs can be protected from infection during the first few weeks of life they are less likely afterwards to be seriously injured by intestinal worms of the common variety.  
 The worms are spread by means of eggs of microscopic size which are deposited by the adult worms in the intestines of infested pigs, and which pass out of the body in the feces, after a period of incubation which varies according to temperature and other conditions. The egg contains a tiny embryonic worm, and is ready for further development when swallowed by a pig. The eggs are highly resistant and may retain their vitality for years. It is therefore evident that in course of time the ground in yards where pigs are kept may become very heavily laden with the eggs of the worms.  
 When the eggs are swallowed the young worms hatch out, but do not immediately settle down in the intestine. They get into the circulation and are carried to various organs of the body, including the lungs. Meanwhile they increase somewhat in size and undergo certain changes of structure. In a week or ten days they can be found in infested pigs examined post-mortem crawling up the windpipe into the mouth and down the esophagus into the stomach. In the normal course of events they finally reach the intestine again, where they develop slowly to maturity. Small pigs if their lungs are invaded by large numbers of the young intestinal worms are liable to develop pneumonia, which may prove fatal. It is not improbable that many cases of lung trouble among young pigs are caused by these worms.  
 The question of preventing losses among young pigs by worms, judging from the results of the investigations carried on in the zoological division of the bureau of animal industry, largely resolves itself into a question of providing good sanitary conditions for the pigs, particularly during the suckling period. The sows before farrowing should be kept in clean, dry places away from mud walls, and until the pigs are several weeks old they should be kept preferably in buildings and pens with floors which can be easily cleaned and which are kept clean.

One Way of Preventing Worms in Pigs Is to Provide Good, Sanitary Quarters.

plenty of room to pass without interfering with the speed or rights of the one going in the other direction.  
 We have seen several narrow escapes from accidents in such places, and the watchword now is "Safety First." The automobile is here to stay, and we want road to spread out and avoid all danger of accidents.  
 Our counties are now paying large salaries to men who are supposed to be efficient, and good civil engineers, and the safety and comfort of the public largely rests on them. It is the duty of such men to catch up with the times and provide roads suited to the needs of present-day travel. Such improvements are not very expensive, and when properly made last a lifetime, and save time, trouble and accidents.

**TEST OF TIRES ON HIGHWAYS**  
 Results Obtained by United States Office of Public Roads After Period of Years.  
 In its testing of tires on country roads during a period of several years the United States office of public roads has prepared the road prior to each test by plowing, grading and rolling—thus, with further consideration of moisture and atmospheric variations, giving conditions as nearly identical as possible for each of the trials compared. It was found that the tread decreased with increase of the width to a certain limit, beyond which it increased. As a result of the experiments, it is recommended that for ordinary farm work and general trucking, the standard width of the tire for a one-horse wagon, with gross load of 2,000 pounds, should be two inches; light two-horse wagon, 2,500 pounds, two and one-half inches; medium two-horse wagon, 4,500 pounds, three inches; standard two-horse wagon, 6,800 pounds, four inches; heavy two-horse wagon, 7,500 pounds, five inches.

## MENACE TO SHEEP INDUSTRY

Dogs and Coyotes Constitute One of Greatest Drawbacks to Wool and Mutton Business.

(Prepared by the United States Department of Agriculture.)  
 Wool and mutton are commanding higher prices than ever before and supplies of wool are being depleted so rapidly that it will take some time after peace is declared to restock the wool trade, says Bulletin 925, "The Sheep-Killing Dog," issued by the United States department of agriculture.  
 The United States is experiencing the greatest shortage of mutton and wool in the history of the country. It is the duty of the American farmer to increase the supply.  
 The sheep-killing dog constitutes one of the greatest menaces to the success of the sheep industry.  
 The dog not only kills sheep but keeps out of the sheep business men who are otherwise inclined to go into it.  
 The most effective method of dealing with the sheep-killing dog is through efficient legislation.  
 Notable progress has been made by several states in enacting good dog laws, and others are expected to take similar action.  
 No law, however well worded it may be, can be effective unless it is enforced and has the moral support of the people who are affected by it.  
 Uniform state dog laws are desirable.

**Feed Is Assured.**  
 The silo located near the feed manger is an assurance of having feed near at hand in stormy as well as fair weather.

**Greatest Profit With Hogs.**  
 To obtain the greatest profit in raising hogs, whether few or many are grown, good pasture is absolutely necessary.

**Ration for Brood Sow.**  
 A good ration for a sow just previous to farrowing is equal parts of corn, ground oats, and wheat middlings.

**Rich Soil for Rape.**  
 Rape requires a rich soil for satisfactory yield and will when conditions are favorable produce considerable grazing.

**When to Stop Churning.**  
 The churn should be stopped when the butter granules are the size of grains of wheat.

**Economize Men House Space.**  
 To economize space in the poultry house the nests may be placed under the dropping boards. It is best to have them darkened, as the hens prefer a secluded place in which to lay.

**Raise More Chickens.**  
 Buy the Old Reliable Everlasting house with a crewel of blue, a rule, a small deep can and fill it with kerosene. Dip the feet and legs in it up to the feathers, but do not wet the feathers, and hold them in it a second or two, but not longer. In a short time the scales will peel off and the legs will be in as good condition as though they had never been scaly.

**Good Roads Campaign.**  
 The good roads campaign is always on and will always be on until every road shall have been paved with the best of material and in the best of manner. And then there will probably be the establishing of more main roads, and so it will go on until the country is well supplied with roads that will be practicable 365 days in the year.

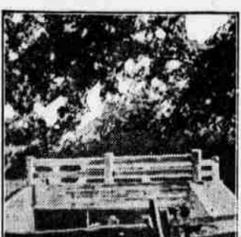

**Gaining in Importance.**  
 The question of roads gains in importance and interest with every passing year.

# ROAD BUILDING

## SUGGESTIONS ON GOOD ROADS

Special Thought Should Be Given by Builders to Road Crossings to Avoid Accidents.

While highway engineers, commissioners and others are planning good roads and strong, durable bridges, they ought to give special thought and work to the road crossings and the sewers or culverts placed at such crossings, says a writer in Farmers' Review.  
 Such crossings are generally about 12 to 16 feet long, and it requires an abrupt turn of a vehicle to take them at right angle. These are danger points on account of the short turn and narrow space to make the turn.  
 The remedy for such places is to make sewer or culvert as long as the width of the road will permit, say not less than 40 feet, and more if possible.

Durable Concrete Culvert.

and then if vehicles meet, there is plenty of room to pass without interfering with the speed or rights of the one going in the other direction.  
 We have seen several narrow escapes from accidents in such places, and the watchword now is "Safety First." The automobile is here to stay, and we want road to spread out and avoid all danger of accidents.  
 Our counties are now paying large salaries to men who are supposed to be efficient, and good civil engineers, and the safety and comfort of the public largely rests on them. It is the duty of such men to catch up with the times and provide roads suited to the needs of present-day travel. Such improvements are not very expensive, and when properly made last a lifetime, and save time, trouble and accidents.

**TEST OF TIRES ON HIGHWAYS**  
 Results Obtained by United States Office of Public Roads After Period of Years.  
 In its testing of tires on country roads during a period of several years the United States office of public roads has prepared the road prior to each test by plowing, grading and rolling—thus, with further consideration of moisture and atmospheric variations, giving conditions as nearly identical as possible for each of the trials compared. It was found that the tread decreased with increase of the width to a certain limit, beyond which it increased. As a result of the experiments, it is recommended that for ordinary farm work and general trucking, the standard width of the tire for a one-horse wagon, with gross load of 2,000 pounds, should be two inches; light two-horse wagon, 2,500 pounds, two and one-half inches; medium two-horse wagon, 4,500 pounds, three inches; standard two-horse wagon, 6,800 pounds, four inches; heavy two-horse wagon, 7,500 pounds, five inches.

## CONSTRUCT NEW HIGHWAYS

State of Illinois Expected to Expend \$3,000,000 in Improving Roads This Season.

It is expected that Illinois will expend \$3,000,000 this year on federal-aid highways. The proposed road construction outlined by the Illinois state highway department has been approved by the national government, according to Secretary of Agriculture Houston.  
 The proposed work includes construction along the Dixie highway, the Lincoln highway, the highway from Chicago to the Wisconsin state line, the Chicago to Joliet highway and the road from Peoria northeast to Springfield. Federal-aid money for these roads is to be available shortly, it is announced.

## POULTRY RAISING IS A DUTY

Farmers and People in Cities Should Keep Enough Hens to Supply Table With Eggs.

(Prepared by the United States Department of Agriculture.)  
 If poultry is to play the part that it should play in feeding the nation and winning the war, not only will the deficiency created during the past year have to be made good, but there will have to be added something to the average as it stood before the 1917 depletion began. The duty and the opportunity falls upon general farmers and upon families in cities and towns who have enough back-yard space—and that means much less space than may be ordinarily considered necessary—to keep enough hens to supply their own tables with eggs.

## KEROSENE FOR SCALY LEGS

In Short Time After Dipping Scales Will Peel Off—Avoid Wetting the Feathers.

Here is a simple remedy for scaly legs in fowls; as a rule, one application is sufficient: Take a small, deep can and fill it with kerosene. Dip the feet and legs in it up to the feathers, but do not wet the feathers, and hold them in it a second or two, but not longer. In a short time the scales will peel off and the legs will be in as good condition as though they had never been scaly.

**Economize Men House Space.**  
 To economize space in the poultry house the nests may be placed under the dropping boards. It is best to have them darkened, as the hens prefer a secluded place in which to lay.

**Raise More Chickens.**  
 Buy the Old Reliable Everlasting house with a crewel of blue, a rule, a small deep can and fill it with kerosene. Dip the feet and legs in it up to the feathers, but do not wet the feathers, and hold them in it a second or two, but not longer. In a short time the scales will peel off and the legs will be in as good condition as though they had never been scaly.

# POULTRY

## MEAT SUPPLY FROM POULTRY

Impertative That Productive Stock Be Rather Largely Increased During Current Year.

(Prepared by the United States Department of Agriculture.)  
 Meat can be produced from poultry more quickly than from any other source. One of the necessities imposed upon the United States by its entrance into the world war is to produce more meat than it has ever produced before. This is essential not only to meet its own greater needs because of being on a war basis, but also to save the countries with which it co-operates in the war from defeat through lack of food.  
 Meat is one of the most essential of food products. Of such meats as can be cured and kept in compact form, larger quantities than ever before must be sent to the armies overseas, and the proportion of these exports to the total production in the United States is likely to increase steadily and even rapidly, as larger armed forces from this country are sent to the fighting front in Europe.  
 In order to leave available for the forces overseas as large a proportion as possible of the output of cured and compact meats, it is desirable that there be a decided increase in both the home production and the home consumption of white meats such as poultry. To that end it is imperative that the productive stock on general farms and in the back yards of the nation be rather largely increased during the current year. It has always been true and will always be true that the great bulk of this country's poultry is produced not on specialized poultry farms but in the dooryards and farm lots of the diversified farms. Establishments devoting their attention exclusively to the production of poultry have been and will continue to be of rather large importance, but they can hardly be looked to or any very great part of an emergency increase in production sufficient to constitute a noticeable factor in feeding the world at war. That demand upon the nation's potential production capacity can be met, however, by the farmers and home makers of the country without any sort of strain and with compensations about that. When they were choosing my features for me they took the first nose that turned up."—Exchange.

## KEEP BROODING COOP CLEAN

Give Chick's Good Overhauling Once a Week—Spray Thoroughly for Mites.

(From the United States Department of Agriculture.)  
 The brood coop should be cleaned at least once a week and kept free from mites. If mites are found in the coop, it should be thoroughly cleaned and sprayed with kerosene oil or crude petroleum. From 1 to 2 inches of sand or fine dirt or a thin layer of straw or fine hay should be spread on the floor of the coop. Brood coops should be moved weekly to fresh ground, preferably where there is new grass. Shade is very essential in rearing chickens, especially during warm weather; therefore, the coops should be placed in the shade whenever possible. A cornfield makes fine range for young chickens, as they secure many bugs and worms and have fresh ground to run on most of the time, due to the cultivation of the ground, and have abundant shade at the same time.

## POULTRY RAISING IS A DUTY

Farmers and People in Cities Should Keep Enough Hens to Supply Table With Eggs.

(Prepared by the United States Department of Agriculture.)  
 If poultry is to play the part that it should play in feeding the nation and winning the war, not only will the deficiency created during the past year have to be made good, but there will have to be added something to the average as it stood before the 1917 depletion began. The duty and the opportunity falls upon general farmers and upon families in cities and towns who have enough back-yard space—and that means much less space than may be ordinarily considered necessary—to keep enough hens to supply their own tables with eggs.

## KEROSENE FOR SCALY LEGS
