GAS SHIP IN RACE WITH SUB

Destroyers Appear as Shell Falls but Ten Feet Off Stern.

HAS HUGE CARGO OF DEATH

Freighter Develops Engine Trouble and Falls Behind Convoy—Submarine Bobs Up and Begins Hurling Shells.

By FRAZIER HUNT
(In the Chicago Tribune.)

An American Naval Base in France. —A lad from the U. S. S. Destroyer 552 had just finished narrating how close they had come to getting a submarine on the last trip when they had brought in a big convoy of troops. "Some boat she is," he remarked offhand. "We did seven thousand knots last month and in three sub fights. Say, what was those funny steel drums you had piled on the deck of your old cargo ship when you come in yesterday?"

A lad from the Atlantic freight ferry boat turned to the destroyer gob.

"Those steel drums you asked about didn't have nothing at all in them except about a million gallons of the most dangerous poison gas ever made. Can you imagine what would happen if a torpedo or even a shell had hit one of those tanks?"

This ship, which we shall call the Terrance, left New York as part of a convoy of 15 stores ships.

Cargo of Death.

On this trip it was carrying several thousand steel drums of poison gas that the army needed badly. It was a dangerous cargo. Any explosion on board would tear open these drums of concentrated gas and in ten seconds choke the crew to death. The only hope would be to use respirators, so a hundred gas masks were borrowed from the army and the executive officer of the ship called all hands for instructions three times a day.

The first ten days of the trip were uneventful. Then the Terrance's engines began acting badly. It could not make the required ten knots and slowly it fell behind. There were not sufficient convoying destroyers to have one remain behind, so all that stood between the Terrance's drums of death and a German submarine was the fore and aft guns.

Finally, at six o'clock one evening, the gas mask drill just had ended when the lookout in the crow's nest shouted down that a submarine was coming to the surface on the port side, some 9,000 yards astern. And here was the Terrance with crippled engines hobbling along six or seven knots an hour, with the convoy 20 miles ahead. "Open fire with the stern gun. Call

general quarters. Send S. O. S. to the convoy. Send word to the chief engineer." were four orders the skipper on the bridge gave first.

Through his binoculars he could see the submarine coming to the surface. Even now the Terrance's stern gun was peppering away shots, but falling short of the mark by 1,500 yards.

In half a minute more the submarine's conning tower opened and men crawled out and uncovered the submarine's two guns. In another minute the first shell came whining toward the Terrance. It, too, fell away short.

Call for Help.

In the radio room the operator was pounding out the call for help, and now came the answer that the destroyers were coming to aid. Down below the whole engine force was working manly. Suddenly a miracle happened and the starboard engines began supplying power to the propeller. From a bare seven knots the ship jumped to ten—then eleven, twelve.

Meantime on the bridge the officers with gas masks strapped at alert position were getting the thrill of their whole life as the old boat picked up speed. Sub shells now were falling within 900 yards of the ship.

With the Terrance's new speed the sub gained slowly, but the skipper and officers knew its guns would outrange their own and soon find a mark. It was a great race with life or death for the goal.

Then from the edge of the world came the smoke of destroyers shooting ahead like flaming arrows. Thirty knots and more they were making. In another minute they could trace their outline. But the sub was nearing, too. One shell broke less than thirty yards away.

Seconds seemed like hours, but each brought the rescuing destroyers nearer. They were heading straight for the sub, and no sub cares for that. There was one more shot, then the gunners ran to the conning tower and climbed inside. Two minutes later she submerged. Their last shot hit within ten feet of the Terrance's stern.

CLAIM CURE FOR GLANDERS

Italian Savant's Discovery, If True, Will Have Earned Them the Gratitude of Mankind.

The reviews of medicine and veterinary surgery speak of important researches looking to the cure of glanders, which afflicts horses and may also attack man, who almost invariably succumbs.

At the beginning of the war the spread of glanders, especially among the quadrupeds of the Third Italian army, suggested to Colonel Commanding Dr. E. Bertetti, director of the veterinary service of the army, the idea of utilizing the victims of glanders in making experiments in regard to its curability.

Obtaining permission of the war ministry and the supreme command of the army, the experiments were begun at Casole in a sanitarium rigorously quarantined and equipped with all the latest scientific and surgical appliances.

Dr. Guido Finzi, head of the Institute of Pathology and Medical Clinics of the Superior Veterinary School of Turin, assisted Doctor Bertetti. After two years they announced that glanders was curable, not only in its chronic stages but also in its process of evolution.

The importance of the discovery and the evidence of the results obtained, led the two experimenters to ask for a commission to make practical tests of their discoveries. The results fully confirmed the facts announced by Doctors Bertetti and Finzi.

PUT HYPNOTISM TO GOOD USE

Australian Physician Announces That He Has Cured War Stammering by Its Employment.

Writing in the Medical Journal of Australia, Dr. Clarence G. Godfrey states that during the past two years a number of cases have been referred to him for treatment by hypnotic suggestion, in which stammering or stuttering had developed, or had been revived, after years of disappearance, as the result of shell shock or of various war stresses. Sometimes a hypnotized patient has been told to keep on repeating some well-known nursery rhyme and not to cease at the signal to awake, although in the middle of the rhyme, but to keep on talking. He will usually manifest his astonishment at finding himself talking without difficulty. Sometimes a patient will converse on waking without realizing that his stammering has disappeared until his attention is drawn to it with amusing effect. In one case the patient spoke perfectly in sleep at the first attempt to hypnotize him, although he had had a very bad stutter for eight months past, being almost inarticulate. He woke in a few minutes apparently cured and has been free from stutter ever since.

It has been noticed that every case treated, even the worst, has been able to speak far better in the hypnotic state than out of it.

DESIRABLE SITE FOR FARM

Farmer Is Fortunate if Stream or Lake Is Handy for Required Supply of Ice.

Other features being satisfactory, a farm is well located that has a stream or lake or pond from which a supply of good, clear, clean ice may be harvested and the farmer is doubly fortunate if there is an icehouse at hand ready to receive it.

TAKING CARE OF SOW AND LITTER

Sufficient Protection Must Be Provided During Months of March and April.

GIVE STRAW FOR WARM BED

After Pigs Arrive Nothing Should Be Given but Supply of Clean Water—Feed Moderately for the First Few Days.

(Prepared by the United States Department of Agriculture.)

Many farmers have their sows farrow during the months of March and April and the early fall months in the South. Since the weather is often severe in northern sections during March and April, care should be taken to protect the sow from cold. Give her enough straw to make a warm bed, but not so much as to allow the little pigs to get covered and crushed. The sow should have clean water but nothing else for the first 24 hours after the pigs arrive.

Feed for First Week.

On the second day a thin bran mash or skim milk will be relished. Feed moderately for the first week. A mixture of two parts of corn and one of middlings may be fed in increasing amounts until the sow is eating a full feed. If skim milk can be fed in addition to the grain, there is nothing better to make the sow give a full flow of milk. Another good grain mixture for the sow at this time is six parts of corn and one of oil meal. If skim milk is available, the sow will do well on four pounds of milk to one of corn. A full grain ration for a day should never be more than four per cent of the sow's live weight. If the sow can be put on alfalfa, clover, blue grass, or rape pasture, less corn will be required. A corn ration of about two per cent of the sow's live weight with good pasture makes a cheap and adequate supply.

Care of Young Pigs.

As soon as the little pigs begin to eat they will do best if fed additional slop in a separate pen and away from their mother and the larger pigs. This can be done by having a pen or a lot where choice clover or other forage crop is growing to which the pigs may have access, but where the opening is so small that the larger pigs cannot pass through. When the young pigs are from eight to ten weeks old they should be weaned. This often causes a serious check in their growth, but should not do so. When

Sow With Profitable Litter.

It is desirable to wean the pigs put the mother in a pen leaving a creep for the pigs. Feed the sow sparingly; give water instead of slop and have the grain ration dry. While the sow is receiving a maintenance ration the pigs should be fed all they will consume without waste. A ration consisting of such feeds as skim milk, middlings, corn, and green forage will satisfy the pigs' appetites and simplify the weaning.

HOG HAS NUMEROUS ENEMIES

Louse Is Most Common of Pests and Also Easiest to Get Rid Of—Oiler Is Effective.

The hog has numerous enemies, among the worst of which are parasites. The hog louse is the most common of these pests and it might also be said it is also the easiest to get rid of.

Mentholated or crude oil will drive out lice, and at their first appearance every hog raiser should get busy without delay. If you have a dozen or more hogs it will pay you to get a hog oiler for applying the oil, as this permits the hog itself to rub the oil directly into the itchy, lousy parts, without any trouble to you.

Don't let your hogs keep rubbing away their flesh and your profits on every fence rail, post, tree, etc., and put themselves in a physical condition to fall easy victims to the germs of cholera and other scourges. One hog oiler to every 20 to 30 hogs will relieve them from torments of lice and will prove the best investment a hog raiser could make.

FIXING LOCATION OF WELL

Direction of Surface and Underground Drainage Should Be Given Good Consideration.

(Prepared by the United States Department of Agriculture.)

When locating the well the direction of the surface and underground drainage should be considered, to the end that the water supply may not be contaminated by the sink, drain, cesspool, or other sources of filth.

A Few Specials

Karo Syrup 5 lb can 55c, 10 lb can \$1.00
Peanut Butter per lb 20c, 3 lbs 50c
