The Telephone serves best when its service is universal

YOUR TELEPHONE is connectible with 143,000 other telephones in Oregon, and with nineteen million telephones all over the United States.

A moment's thought will show that such a broad service—putting your telephone at the center of a network that covers Oregon and the nation—is made possible only by uniformity of equipment, uniformity of method, and close-working harmony between the operating companies of these widely separated geographical areas.

About two-thirds of the nation's telephones—the nineteen million to which your telephone is readily connectible—are operated by a group of companies known collectively as the Bell System. The Pacific Telephone and Telegraph Company is one of these operating companies.

Not only does the relationship give the Pacific Company the right to all patents, technical experience and results of scientific research of the Bell System, but it enables the Pacific Company to operate at the lowest possible cost—thereby keeping charges for telephone service at a minimum. Through the Western Electric Company—the manufacturing, supply and distributing organization of the Bell System—the Pacific Company is able to get its telephone supplies about 20% cheaper than it would get them otherwise.

The co-ordinating head of the Bell System is the American Telephone and Telegraph Company, a national organization with more than 430,000 stockholders. It owns a majority of the stock of the operating companies. Its fundamental interest is the best possible telephone service at the lowest cost, consistent with safety, and its fifty-year-old guiding principle has been to seek no speculative or large profits, but to work solely for a constantly enlarging and improving telephone service.

The ownership of a majority of The Pacific Telephone and Telegraph company's stock by the American Telephone and Telegraph Company has been regularly published in the American Company's annual report, and spread broadcast for many years. It is one of the chief reasons for the advanced type of telephone service enjoyed in Oregon and on the Pacific Coast.

We are proud to be one of the family of associated companies whose mutual cooperation and access to the telephone experience and research services of the nation have given to Oregon and the United States the most nearly universal telephone service possessed by any country.
