Mother and I went into a drug store and ordered chocolate sundae. When finished I piled up the dishes, as I had been taught to do at home, and carried them to the counter. Of course, everyone smiled and I realized what I had done. It didn't take me long to get out of the store.—Exchange.

Proof that the Holstein-Friesian is the greatest breed in the world for production is again to be found in the newly made record of the cow Segis Pietertje Prospect 221,846, who at six years of age, has made the largest amount of milk ever produced in a year by any cow of any breed.

This record, which was made under the rules of the Advanced Registry department of the Holstein-Friesian Association of America, is 37,384.1 lbs of milk containing 1,445.9 lbs of butter. Her daily average for the year was 102.4 lbs of milk, or nearly 4 lbs of butter. During the year she made a seven-day record of 33.18 lbs of butter. Such a yield, which was almost twice her own weight of milk every month, would mean a gross return, at five cents per qt. of \$89.40, or at fifty cents per lb. for butter, \$722.96 for the year.
