Time to Re-tire? (Buy Fisk)

THE lower prices on Fisk Cord Tires are interesting to you because they buy more tire value than higher priced tires can give you. Comparison with other tires will show you Fisk are bigger, stronger, and lower priced throughout the range of sizes.

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon

It Costs You More to rot buildings than it does to let paint save them

CHECK the costs. Compare the prices of lumber and paint. They will show you how extravagant it is to allow buildings to depreciate for lack of paint.

And buildings do depreciate rapidly unless they are painted when they need to be. Paint saves the lumber. It protects your investment.

To enjoy the biggest saving in painting, use the best paint. It spreads more easily—saves labor cost. It covers more surface per gallon than "cheap" paint.

It serves five or more years longer than "cheap" paint. The best paint is most economical because it is scientific in formula and preparation. We have been making best paints for 75 years.

They contain the finest materials. Our white lead, for instance, is PIONEER WHITE LEAD. It is super-purified and ground so fine that it will pass through a silk screen with 10,000 meshes to the square inch.

So with the other materials—pure linseed oil, pure zinc and pure colors—all of the finest quality, combined in Fuller's Paint in scientifically exact proportions with long-time skill.

Free Advice on Painting

Ask our agent for advice, color cards, etc. Ask the dealer to specify the Department about the best brand of color, primer, and linseed oil and see what results.

Makers of Fuller's Paint: All-Purpose Paints, Portland Cement, Vermiculite, Silica Gel, Emulsions, Fibers for Paper, Varnishes, Washes, Stains, Auto Enamels, and other products. Fullerton, Calif. and Portland, Ore.

DAIRY

TO GROW SUFFICIENT SILAGE

Experts Assert It is Better to Carefully Figure on Silo to Fit Here of Cows.

(Prepared by the United States Department of Agriculture.)

The planting season is the time when the dairy farmer should arrange to see that he has crops enough to fill his silo. As a case in point, a Mississippi farmer failed to take this matter into consideration when he bought a silo of 60 tons' capacity, for he found that he had corn and soyabean for only 20 tons of silage; and since, moreover, he had only 5 cows, he decided he had made a mistake, and tried to sell his new silo instead of setting it up. A field man from the dairy division of the United States Department of Agriculture however, persuaded him to keep it until the next year, and to put up a small stove silo for immediate use. He did so, and found it such a help in feeding his cows cheaply that he bought more land and increased his silage to his herd to 50 cows, and thus made good use of his larger silo.

Both the height and the diameter of the silo must be considered. The proper diameter of the silo depends upon the quantity of silage to be fed daily; and this quantity will vary with the size of the herd. The silage should be fed out fast enough to remove it from the top of the silo at the rate of 1 1/2 to 3 inches a day, depending upon climatic conditions. The warmer the weather the more silage must be removed from the surface daily in order to prevent spoiling. For the winter feeding season it is safer to figure upon removing 2 inches daily than any smaller amount.

A common error in building is to make the diameter too large for the size of the herd. The weight of a cubic foot of silage varies according to the pressure to which it is subjected, but in a silo 30 feet high the weight per cubic foot averages about 40 pounds. So, by knowing the quantity of silage to be fed daily, it is possible to estimate what the diameter of the silo should be to permit the removal of a certain number of inches each day. The table below shows the proper diameter of the silo, on a basis of 40 pounds of silage per cubic foot.

Laying the Foundation of a New Silo for herds of different sizes to be fed different quantities for winter feeding, when 2 inches of silage are removed daily.

Relation of Size of Herd to Diameter of Silo for Winter Feeding.

Number of animals that may be fed, allowing—	Quantity of silage in depth of 2 feet			
	10 pounds per head	20 pounds per head	30 pounds per head	40 pounds per head
10	10	20	30	40
15	15	30	45	60
20	20	40	60	80
25	25	50	75	100
30	30	60	90	120
35	35	70	105	140
40	40	80	120	160
45	45	90	135	180
50	50	100	150	200
55	55	110	165	220
60	60	120	180	240

A 900-pound cow ordinarily consumes 30 pounds of silage a day, and a 1,200-pound one about 40 pounds. Yearlings eat about one-half as much as mature animals; fattening cattle, 25 to 35 pounds for such 1,000 pounds live weight.

It happens, sometimes, that a silo is not wholly filled, because there is not enough corn planted for silage and there are not enough of other crops make up the deficiency. The amount of silage that may be obtained from an acre of corn varies from 4 to 20 tons. A fair allowance on average land is 8 tons per acre. Hence for a 90-ton silo it might be well to plant 8 or 10 acres of corn.

It is by all means best to lay out land enough in silage crops to fill the silo to the very top; and if there is any doubt about how much will be needed, to allow a margin of safety, remembering that the season may cut down the yield of this as well as of other crops. On the other hand, if there is too much corn or sorghum to go into the silo the excess can be cut as dry fodder, and other crops can be made into hay.

Two bulletins issued by the Department of Agriculture are useful in this connection; see Farmers' Bulletin 865, Home-made Silos; and the other in Farmers' Bulletin 878, The Making and Feeding of Silage.

MARK TWAIN AND WATTERSON

Life-long Friendship Between Two of the Bravest Men the United States Has Produced.

The late Henry Watterson was a long-time friend of Mark Twain, as of nearly every other prominent American literary worker of his day, and related many anecdotes that resulted from this friendship. Mark Twain's mind turned ever to the doll.

"Once in London I was living with my family at 103 Mount Street, between 102 and 104 there was the parochial workhouse, quite a long and imposing edifice." Mr. Watterson relates in his autobiography. "One evening, upon coming in from an outing, I found a letter he had written on the sitting room table. He had left it with his card. He spoke of the shock he had received upon finding that next to 103—presumably 103—was the workhouse. He had loved me, but had always feared I would end by disgracing the family—being hanged or something—but the workhouse, that was beyond him; he had not thought it would come to that. And so on, through pages of horseplay; his relief on ascertaining the truth and learning his mistake, his regret at not finding me at home, closing with a dinner invitation.

"It was at Geneva, Switzerland, that I received a long overhasting letter, full of bombast and oddities, written from London. Two or three hours later came a telegram. "Burr letter. Not it from your memory, Susie is dead."

SCHEME WORKED OUT WELL

How Heat Made Pretty Sure That Unwelcome Guest Would Not Attend Engagement Party.

The problem was how to invite a certain young woman to the engagement party and still be certain that she would decline to attend. She was known to be a killjoy, but if she were not invited she would talk of it.

About two weeks prior to the party the couple managed to bring together the young woman and a masculine acquaintance of theirs. After the proper introduction the innocent young man and the young woman were left alone.

The following week the young man received two theater tickets from his acquaintance who was to be engaged, who said he would not be able to use them himself. Three days later the young woman received an invitation to the party.

"He's a nice fellow," ran part of the letter in answer to the engagement party invitation, "and he has asked me to accompany him to the theater on the very evening of your party. I would like to come to your party, but I gave him my promise before I received your invitation, so you see how it is; I do hope you will excuse me."—New York Sun.

Giants.

From Nature we learn of a recent meeting of the British association, wherein it was brought out that the popular conception is untrue regarding power of giants and the masculine types of masculinity which they are supposed to be. Statistics were presented to show that giants were relatively feeble, usually short lived, and in the majority of cases, devoid of those features peculiar to masculinity. Giannetoni was said to be identical with abnormal conditions of two small organs located at the base of the brain—the thyroid gland and the pituitary body. The overactivity of these, preceding or near the period of birth, is the primary cause. Sometimes, however, their overactivity comes into play after the individual has attained his full growth, and, as a result, an overgrowth of the extremities takes place.

Women Have Changed Little.

Women who danced for and with the Pharos put on the war paint just as enthusiastically as the lady of today.

A collection of the vanity pots of an Egyptian lady of quality, rescued from the tomb which held her mummified corpse, has just been brought to London. In it, wonderfully bloom glass took the place of the silver tablet necessary of the present time. Some of the glass pots are beautifully iridescent—due to the broods made on the pots by the acid in the stibium with which they were filled, and with which the Egyptian beauty painted her eyelids, and eyebrows.

The collection included a heena pot still containing traces of the dye with which feminine Egypt of the period burned her finger nails—as London's smart set is doing this season.

Wife Served at Church Door.

Until the middle of the seventeenth century a familiar figure at a Virginia church door on a Sunday morning was a county sheriff. The law requiring attendance at divine worship was of test assistance to him. It rounded up the planters and small farmers who remote corners and enabled him with a minimum of effort to serve writs, warrants, summonses, executions and similar official papers. This practical method disturbed the lawyers who did not fancy official interference on such an occasion. So, in 1676, they passed a law prohibiting the service of official papers on Sunday, at the parish church or elsewhere, and the sheriff was sent off on his job of trail the other six days to do as well as he might.

Nine-Cent Knife Brings Five Dollars in Chicago

Both knives were made in Germany. Both are the same size and equal in value. The knife to the left retailed for 9.5 cents in Berlin. The one to the right sold for \$5 in Chicago.

U. S. MANUFACTURERS LOSE CUSTOMERS AND U. S. WORKMEN LOSE THEIR JOBS BUT THE CONSUMER PAYS PROFITEERS

CHAIRMAN FORDNEY, of the Ways and Means Committee of the United States House of Representatives, exhibited the knives photographed above to Congress. One cost nine cents in Germany; the other five dollars in Chicago.

A few days later a Chicago importing firm stated that the knife No. 2 cost twenty-five times nine cents and that it was bought in America. The Chicago firm bought the knife, which was manufactured by J. A. Henckels in Germany, from the American agent of that firm. The Chicago store paid \$2.40 for it according to their own testimony giving the Chicago store a profit of more than 100 per cent, but the German importer in New York who bought it for nine six-tenths cents in Germany and sold it for \$2.40 "cleaned up" \$2.30 on the deal. The consumer, according to Mr. Fordney, paid the bill.

Testimony before the U. S. Senate and House of Representatives shows that Paris hats, which cost \$5 in American money in France, are selling here as high as \$22.50; fine steel-cut buttons, costing 24 cents per dozen, are selling for \$2.00 per dozen. This is possible because the present tariff law provides that imported articles shall be subject to duty on their value in foreign money, and foreign money has dropped far below par so that the government is losing millions of dollars per day in revenue and the public is paying profiteering prices.

Chairman Fordney declares that the remedy is in the tariff bill now before the U. S. Senate. It provides that imported articles must pay duty on their value in this country. This is called "American valuation." Supporters of this bill say that importers and mail order houses are spending more than one million dollars to defeat it because it means death to their huge profits. These adherents of American valuation also point out that never has such a fight been waged in Washington against a bill in Congress as is being waged against the Fordney tariff bill.

The Beaverton Livery

The one place in town that is always at your service, day or night, Sunday or holiday, when you want us, as you want us, where you want us.

Try to Say Something Good. Have a good word for everybody. The only man who has a right to look down on others, is the man in an alms-house. Even the tombstones speak well of those beneath them.—J. B. Turner.

Only Real Thing in Life. No man can afford to work for money alone. Sluggishly accumulating wealth adds nothing permanent to human welfare. Wealth is only a means to an end. It is life with real purpose that counts most.
