Time to Re-tire?
(Buy Fisk)

THE lower prices on Fisk Cord Tires are interesting to you because they buy more tire value than higher priced tires can give you. Comparison with other tires will show you Fisk are bigger, stronger, and lower priced throughout the range of sizes.

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon

It Costs You More to rot buildings than it does to let paint save them

CHECK the costs. Compare the prices of lumber and paint. They will show you how extravagant it is to allow buildings to depreciate for lack of paint.

And buildings do depreciate rapidly unless they are painted when they need to be. Paint saves the lumber. It protects your investment.

To enjoy the biggest saving in painting, use the best paint. It spreads more evenly—saves labor cost. It covers more surface per gallon than "cheap" paint.

It serves five or more years longer than "cheap" paint. The best paint is most economical because it is scientific in formula and preparation. We have been making best paint for 73 years.

They contain the finest materials. Our white lead, for instance, is PIONEER WHITE LEAD. It is super-purified and ground so fine that it will pass through a silk screen with 30,000 meshes to the square inch.

So with the other materials—pure linseed oil, pure zinc and pure colors—all of the finest quality, combined in Fuller's Paint in scientifically exact proportions with long-time life.

Perhaps, friend!
A Beaverton man is being sued for divorce because he objected when his wife had her hair bobbed. Don't be too quick to denounce him. Perhaps her ears are bigger than he supposed them to be.

DAIRY FACTS

DISPOSING OF MILK SURPLUS

Conditions Likely to Exist in Well-Developed Dairy Districts During Summer.

(Prepared by the United States Department of Agriculture.)

For the first time since the beginning of the World War there is developing in this country a surplus of milk, according to reports recently received by the United States Department of Agriculture. Specialists of the department state that this condition probably will be only temporary during the "flush" of the season, and that it is now apparent in well-developed dairy districts. It may continue during the summer months, but is expected to adjust itself by fall, when demand will reactuate the surplus of supply. The situation is largely due to the falling off in the demand for milk in the manufacture of condensed products, milk powders, evapo, and similar products, for which there was a large export outlet.

The department points out the advisability of using as much milk as possible, in fluid form and otherwise, as a human food. Within the last generation an increased knowledge of the value of milk in the diet has resulted in an almost doubled per capita consumption of milk, and consumers who purchase milk freely thereby encourage production. This is believed to be the best safeguard against a milk shortage and high prices resulting from the withdrawal of dairymen from the business during periods of large production and low farm prices for milk.

But when the limit of human utilization is reached dairy producers necessarily must decide how to dispose of the remainder. In many cases this will be a decision between selling whole milk, selling cream, or even to use a moderate quantity of whole milk for feeding, especially to young animals. In any event, a more liberal use of milk on farms should reduce the surplus, even though not solving the problem entirely.

As a guide to persons desiring to utilize surplus milk as a live stock feed, the department issues the following recommendations, which may be supplemented with literature issued by the department:

Milk from a dairy herd which is not definitely known to be free from tuberculosis should be scalded before being fed. An ordinary feed cooker is a practical means for scalding milk. This process is approximately equivalent to pasteurization, which most large cities require as a safeguard to public health. Metal pails that can be kept clean by washing and scalding are preferable to wooden containers or others that are difficult to clean.

Typical Dairy Herd in Some Sections.

In calf feeding it usually pays well to feed one pound of whole milk for each ten pounds of the calf's weight, for a period of five weeks, and at the end of that time to change gradually to an equivalent amount of skim milk. The skim milk should be gradually increased as the calf grows until about 15 pounds per day is fed at the end of three months. Feed the milk warm and regulate the quantity according to size and vigor of the calf.

For pigs three weeks old or more, three parts of skim milk mixed with one part of shorts, is useful in keeping them growing. Skim milk may be fed with corn and other long feeds in various practical combinations. In poultry feeding both skim milk and buttermilk are excellent feeds and can now also be purchased as a nonperishable commercial feed, which is sold in large barrels or containers to farmsteads. Skim milk and buttermilk may be fed alone or mixed with other feeds, but feeders should avoid giving too much milk or based feeds, as they may result. This is caused primarily by fowls eating spoiled, clabbered milk remaining from a previous feeding.

While to live stock owners unaccustomed to the use of milk as a stock feed it may appear somewhat expensive, there are advantages which milk feeders quickly recognize. In addition to utilizing the surplus milk that would otherwise be wasted, young stock generally make a very rapid growth. This means early maturity and early usefulness, compared with stock that have developed more slowly. At least as a temporary measure there is a real opportunity to improve farm live stock, in addition to relieving a local milk surplus, by using skim milk rather liberally in proper combination with other feeds.

The KITCHEN CABINET

Justice is itself the great standing policy of civil society, and any departure from it, under the circumstances, lies under suspicion of being no policy at all.—Burke.

SUMMERY DISHES.

During the hot weather hearty dishes and heavy desserts are not desirable. The appetite craves fruits, vegetables and refreshing drinks.

Eggs With Piquant Sauce.—Chop one green pepper, one tablespoonful of capers, one small pickled onion, one pickle and a sprig of parsley. Melt a tablespoonful of butter in a saucepan add a tablespoonful of boiling water; add to this the juice of half a lemon, a pinch of salt, a dash of flour, then the chopped mixture. Serve this sauce over hard-cooked eggs cut in quarters.

Baked Beets.—Beets retain their color and delicate flavor best when baked. Put well-washed beets into a baking dish with a small amount of water. Turn frequently with a knife to avoid losing the juices, and when done remove the peeling and slice; serve with olive oil or butter, salt and pepper.

Chili Con Carne.—This dish may not appeal to some during the hot weather, but as the southern people need peppery hot dishes to keep them ambitious, the northern section during the heated term may find such foods palatable. Take a pound of round steak and one-quarter of a pound of fresh pork, put through the meat grinder, and add three good-sized onions chopped. Brown in a hot frying pan or kettle, add one quart of tomato, chili powder to taste and a chili pepper tied in a cloth to keep the seeds from mixing into the dish. Season with salt and cayenne, if needed, making it as hot as the taste demands. Just a short time before serving time add two cans of kidney beans or their equivalent in cooked beans. When hot, serve. This dish, with a crisp green salad like lettuce, will make a substantial main dish.

Ripe Cucumber Relish.—Grate ripe cucumber, squeeze dry, add salt to taste, one finely chopped onion for each cupful of cucumber, one finely minced red pepper, cayenne pepper to season lightly and vinegar to make a "thick mixture." Bottle and seal. This is a fine sauce for fish.

Nellie Maxwell LOCK COTTER PIN IN PLACE

Not Necessary to Bend Ends Over Flat Against Bolt or Rod—Just Prevent Slipping.

After having slipped the cotter pin into place do not bend the ends over flat against the bolt or rod. It isn't necessary to do this, because the cotter will lock just as securely if the ends are spread just enough to prevent slipping out.

When the ends are bent considerably, it is harder to straighten them sufficiently for later removal of the pin, and further, the ends are very apt to break off when the part is in service, with the very probable result that the flattened cotter will slip out. This instead of exercising and bending being an effective locking means, it is in reality no lock at all.

TWO-PIECE JACK IS USEFUL

Contraption Will Be Found Convenient by Owners Who Intend to Lay Up Their Cars.

The illustration shows a bit of a contraption that should interest such automobile owners or propose to lay

Handy Two-Piece Jack.

up their cars for the winter or to leave them out of service for any great length of time. It is a simple two-piece jack made of round bar steel and capable of lifting the tires off the floor with one motion of the lever. So, of course, should be left idle for long with its weight resting on the tires.

Sense of Security.

"I hope, some day," remarked Mr. "Mighty," "to give up my driver and take a private yacht."
"Why do you prefer the yacht?"
"I can go to bed without being disturbed by the fear that some one is going to steal it out of the garage."

G. L. MILLETT Proprietor

J. W. Fordney Shows Need For United States Valuation

Congressman Points Out Necessity for New System Incorporated in Tariff Bill.

"We are importing at the rate of about \$300,000,000 worth of foreign goods per month into the United States," declares Congressman J. W. Fordney, Chairman of the House Ways and Means Committee. "Most of these goods could be made here. There is not a manufactured article produced in the United States in which the labor cost is less than 50 per cent of the total cost—1 mean, following the raw material from start to finish. Now, if that is true, of the \$300,000,000 that we are sending abroad each month to buy foreign-made goods, \$250,000,000 is going out from the people of the United States to employ German, French, English, Japanese and Chinese labor, while our laborers are watching the streets in idleness.

"Under free trade we must come to a common level somewhere, if we compete with all the countries of the world. Today German labor is getting from 60 to 65 cents per day in gold for ten or twelve hours. Japanese and Chinese labor today is from 12 to 18 cents per day in gold for twelve hours' work. If we had to be placed on a par with the imports from these countries, do you believe we could lift these foreign countries up to our standard of living? Not at all. We have got to come down to a common level somewhere, but we are not ready to do that, and we are not going to do it.

Revision Demanded

"The people of the country are demanding tariff revision. Some people say that Canada will retaliate. Canada is the best customer we have in the world, on the basis of population. There is no place in the world where the balance of trade is stronger than in Canada. There is no reason to complain about the rates fixed in the new tariff bill; none whatever. I shall tell you why. Last year in the customs office of New York alone in import duties for every man, woman and child in Canada. Great Britain, the great free trade country of the world, or said to be, collected \$15.50 per capita, or \$728,000,000. We collected \$3.11. Little Canada is collecting at the rate of 20 per cent ad valorem upon all her imports, dutiable and free. We have the lowest duty of any principal country on the face of the earth right now, and have had since 1913.

Copyright, Underwood & Underwood

Congressman J. W. Fordney, Chairman of House Ways and Means Committee.

"Some people are opposing American valuation, some of the great importers of the country. Some of them have sent out circulars appealing to the merchants of the country, the manufacturers, to appeal to their Congressmen and their senators to oppose American valuation. Why? I shall tell you why. Last year in the customs office of New York alone there were fifty-four hundred cases of under valuation; and this year they are raising at the rate of five hundred cases a month.
