There is no mystery about good oil

It may be made from crude oil, carefully distilled and fractionated. These crude oils must be refined to produce what is known as "good oil." The refining process for making good oil is complex and involves removing impurities and undesirable substances from the crude oil. The refining process can vary depending on the type of crude oil and the specific needs of the end user.

Purity Essential

Eskimos are not the only people who value pure oil. Pure oil is essential for the efficient and economic operation of internal combustion engines. Pure oil means that it contains no harmful impurities that can damage the engine or reduce its performance. Pure oil is a necessary component of an engine's lubrication system, which helps to reduce wear and tear on engine parts and extend the lifespan of the engine.

The BEAVERTON INN

A popular gathering place for the many visitors to the area who come to enjoy the beauty of the Willamette Valley and the Willamette River.
