

Hood's

Sarsaparilla is unquestionably the greatest blood and liver medicine known. It positively and permanently cures every humor, from Pimples to Scrofula. It is the Best Blood Medicine.

Lost at the Last Place.

The absent-minded man and his umbrella continue to promote the gaiety of nations. They figure entertainingly in an article in a German magazine on Prof. Max von Pettenkofer, who has been called the founder of scientific hygiene.

The professor's absent-mindedness had no narrow or restricted range; it covered everything; but umbrellas seemed to be his specialty. He lost a fortune in umbrellas, for he seldom came back with what he had taken away.

Once, however, he made a trip as far as England, and was very proud of having actually succeeded in bringing back his umbrella to Germany. At Augsburg he stopped on business, but sent a telegram saying:

"At 6 o'clock I return with my umbrella."

He did return at 6 o'clock, but as he entered his house at Munich he saw to his dismay that he had no umbrella. He had left it at the telegraph office.

A GUARANTEED CURE FOR PILES

Itches, Burns, Bleeding or Protruding Piles Your druggist will refund money if PAIN-EX-TERMINATOR fails to cure you in 14 days.

The Chicago board of health asserts that a large percentage of sufferers from Bright's disease are those who indulge in what is called high living. People who live on plain food and lead temperate lives rarely have the disease.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for Free Trial Bottle and Treatise. Dr. R. H. Kline, Ltd., 311 Arch St., Philadelphia, Pa.

As might be expected, those who live in fastnesses have a slim diet.

Millions in Oats.

Salzer's New National Oats yielded in Mich., 240 bu., in Mo., 235 bu., in N. D., 110 bu., and in 30 other states from 150 to 300 bu. per acre. Now this Oat if generally grown in 1905, will add millions of bushels to the yield and millions of dollars to the farmer's purse!

Homebuilder Yellow Dent Corn grows like a weed and yields from 157 to 200 bushels and more per acre! It's the biggest yielder on earth!

Salzer's Speltz, Barless Barley, Macaroni Wheat, Pea Oat, Billion Dollar Grass and Earliest Cane are money makers for you, Mr. Farmer.

JUST SEND THIS NOTICE AND 10c in stamps to John A. Salzer Seed Co., La Crosse, Wis., and receive their big catalog and lots of farm seed samples. [P. C. L.]

Two Views.

First Workingman—Look at the inequality. Mr. Million, who lives not ten squares from this corner, has a dog house which cost \$5,000. What do you think of that?

Second Workingman—I think it's a good thing he wanted it, for I built it for him, and made \$1,000 out of it.

CHRONIC SORES

Wheeling, W. Va., May 28, 1903.

Some years ago while at work, I fell over a truck and severely injured both of my shins. My blood became poisoned as a result, and the doctor told me I would have running sores for life, and that if they were healed up the result would be fatal. Under this discouraging report I left off their treatment and resorted to the use of S. S. S. Its effects were prompt and gratifying. It took only a short while for the medicine to entirely cure up the sores, and I am not dead as the doctors intimated, nor have the sores ever broke out again. Some 12 years have elapsed since what I have described occurred. Having been so signally benefited by its use I can heartily recommend it as the one great blood purifier.

JOHN W. FUNDIA.

Care Schmilback Brewing Co.

Chronic sores start often from a pimple, scratch, bruise or boil, and while salves, washes and powders are beneficial, the unhealthy matter in the blood must be driven out or the sore will continue to eat and spread. S. S. S. reaches these old sores through the blood, removes all impurities and poisons, builds up the entire system and strengthens the circulation. S. S. S. is a blood purifier and tonic combined. Contains no mineral whatever but is guaranteed purely vegetable. If you have an old sore write us and our physicians will advise without charge. Book on diseases of the Blood free.

AGRICULTURAL

Exercise for Sheep.

Sheep will stand considerable steady cold, but shiver under wind and are particularly susceptible to dampness. The plan of cooping sheep up in close, warm quarters with little or no ventilation is not a good one. See that their quarters are comfortable by all means, have them dry and fairly warm, but have them well ventilated without drafts. Then provide a shed, have it attached to the pens if possible, open on one end except for what fencing is necessary to keep them in, and let them run under this cover daily. If they are not inclined to take the exercise make them do it, and see that they are provided with some clean roughage to munch while in the shed. Be careful and not give them so much that they will spend their time eating instead of moving about. Water should be supplied abundantly.

Try and locate the shed so that the

PROTECTED RUN FOR SHEEP.

sheep will be protected from the wind and at the same time get all the sunshine there is. The plan of winter care will make sheep healthy and strong. The illustration shows an ideal sheep shed and one which can be readily attached to the barn where the sheep have their regular quarters. Built in the manner indicated, the sloping front greatly protects the sheep from the wind and the low portion of the shed makes an excellent place for the feeding racks.—Indianapolis News.

Ice House and Dairy Combined.

My ice house is built above ground with a good cement floor, which slopes to the center with a fall of 6 inches.

The waste water is conducted by a lead pipe, c, to the dairy room, where in tank, a, are placed the cans of milk. I use deep cans, holding about 4 gallons each. The dairy room is 8x16 feet, and the trough, a, 2 feet wide, 16 feet long and 16 inches deep. This as well as the floor is made of concrete. The waste water is led outside through pipe, b. The ice house is 16x20 feet in size, with 14 foot studs. It will hold about 100 tons of ice, which gives about 30 tons for family use and the balance to supply the dairy through the season. There is always cool, waste water to keep the temperature in the tank from 45 to 50 degrees and it is never necessary to put in ice.—Franklin Rogers, in Farm and Home.

Poultry Pickings.

In keeping hens for layers discard all over two years old.

Excessive fatness leads to a suspension of egg production.

Breeding stock should be fed so as to keep in robust health.

Bone is an absolute necessity in some form to fowls confined in small yards.

Bones are valuable for poultry, chiefly for the phosphate of lime they contain.

When fowls have the advantage of good range there is little necessity for artificial preparations.

If eggs are rotten it is absolute proof that they were fertilized, and that the germ of life started and then died.

When oyster shells are provided they should be broken into pieces the size of grains of corn and not ground to a fine powder.

One of the best foods for a change is sprouted grains. To obtain them, soak in warm water overnight; pass off the water in the morning and keep them damp until they sprout.

The smaller the air bubble in the large end the fresher the egg.

A fat hen is a poor layer, and her eggs will usually prove infertile.

Excessive fat in the male or female is antagonistic to procreation and fecundity.

A fresh egg has a somewhat rough shell, while a stale egg is smooth of shell.

In feeding grain to young fowls it is important to give as good a variety as possible.

The shells of eggs are porous, and pungent filth may penetrate and spoil the flavor.

Roosts should always be on the same level, as the birds will crowd to the highest one.

There is no half-way house in keeping "fancy poultry," and one must have the best or none.

To have good layers, breed from good laying stock and cultivate this quality as fully as possible.

Eggs immersed in water a day or two before the chickens are due will be greater benefited.

There is not much risk in raising poultry; it is not subject to extremes, and there is little danger of overproduction.

Milk Adulteration.

While the ordinary methods of milk adulterations are easily detected by expert examiners, it is reported that a French chemist, Dr. Queneville, has made some experiments that point to the probability that for some time there has been practiced a form of deception in milk adulteration which has escaped the attention of health officers. In a paragraph in the Birmingham Daily Mail it is explained that the deficiency of fats, whether due to the poverty of the milk or the extraction of fats, has been covered by the addition of foreign greasy matter. Dr. Queneville found that "benzine would dissolve foreign fats without affecting the natural fats in milk," and thus by examining samples which have passed the ordinary test he discovered such substances as pork dripping and coconut butter.

Wide or Narrow Tires.

On good roads the Michigan station found the draft of wide and narrow tires about equal. On plowed land narrow-tired wagons pulled forty-five per cent harder than those with wide tires; in sand two inches deep twenty-five per cent harder, and on sod sixteen per cent harder. A wagon not greased pulled eighteen per cent harder than one well greased.

Leveler for Fields.

Some improvement in agricultural machinery is patented every week, and yet no two inventions are designed for similar purposes. An Ohio man has invented a new idea in leveling machines, an illustration of which is shown here. A supporting frame is suspended upon two runners, these runners being similar to runners in a snow sled, the whole apparatus being constructed of either wood or iron. A leveler, in the shape of a triangle, has the apex in a line with the rear end of the runners, the open ends being fastened to the front of the runners. A lever, in reach of the driver on the seat, controls an attachment for raising or lowering the rear end

LEVELS THE GROUND.

of the lever to adjust the latter in its relation to the surface of the ground. A cross bar connects the two runners in front. In use the dirt is leveled to the center of the machine, insuring an equal distribution over the field being leveled. Jacob W. Laferty, near Mechanicsburg, is the patentee.

When to Market Hogs.

A well established fact in connection with feeding hogs and that applies with equal force to cattle and sheep is that a young animal makes better use of its food than does a mature one. In other words, the sooner a hog is made ready for market up to six or eight months of age the cheaper the pork can be produced. This has been demonstrated time and again, and still many people will persist in continuing to feed long after the most profitable feeding period has passed.—Oregon Experiment Station.

COL. BECKWITH SAYS:

"I Take Pleasure in Commending Pe-ru-na For Coughs and Colds."

COL. PAUL E. BECKWITH.

Colonel Paul E. Beckwith, Lt. Col., retired, 1st Reg. Minute Men, in a letter from 1508 Vermont avenue, N. W., Washington, D. C., writes:

"From the unqualified endorsement of many of my friends, I take pleasure in commending your remedies for coughs and colds."—Paul E. Beckwith.

IN FIELD OR BARRACKS PE-RU-NA IS EFFICACIOUS.

The constant exposure to the elements experienced in an out-door life is not so apt to cause coughs and colds as sedentary habits.

Those who are brought face to face with the weather every day in active life are much less liable to catarrhal diseases than those who are housed up in ill ventilated rooms. And yet both of these classes are more or less subject to catarrh and catarrhal diseases.

ALL CLASSES ARE SUBJECT TO CATARRH.

The soldier as well as the civilian finds it frequently necessary to use Peru-na on account of coughs and colds.

No one is exempt. The strong and healthy are less liable than the weak and ill, but none entirely escape.

Peruna has always been a great favorite with the military men, both in the army and navy.

The strongest kind of testimonials are received from officers of high rank concerning the virtues of Peru-na for all catarrhal ailments.

Only a small per cent. of these can be used for publication for want of space.

Mr. Harrison L. Deam, Burnside Post No. 8, Department of the Potomac, Colonel Encampment No. 69, Union Veterans Legion, Colonel Green Clay Smith Regiment No. 17, U. V. U., Department of the Potomac, Military Order Loyal Legion, Department of Columbia, Major 84th Indiana Veteran Volunteer Infantry, writes:

"There is no longer any question as to the curative qualities of Peru-na in all catarrhal troubles. Its successful use by many of my friends entitles it to confidence and endorsement."
