## EXCELLENT PROSPECTS ALONG ROCK CREEK

Spraying and Pruning of Fruit Trees Finished—Large Crop Expected—Gardeners Are Busy.

The majority of the fruit growers along Rock Creek have finished spraying and pruning, and are now ready for the coming season. Early fruit has just commenced to bloom, and has suffered no damage as yet. Last season a few of the orchards along the creek did not produce more than half a crop on account of late spring frosts, but all are anticipating a favorable season for 1908. M. McKinney, Frank Christy, R. S. Ward, R. Gow and Roy James, the leading market gardeners on lower Rock Creek, report that most all the early vegetables are planted and growing nicely, in spite of the cold winds which have prevailed during the past week. All admit that should the dry weather continue much longer it will be necessary to commence irrigating much earlier than usual. The prospects for market gardening in this section were never better, as the prevailing weather conditions will serve to make a failure of the gardens on the high dry lands, thereby forcing the wheat growers to depend upon the irrigated tracts along the creeks and rivers for their supply of vegetables. Market gardeners in this section usually make a profit of \$300 per acre, and their earnings are expected to go much higher this season.
