**Horsemen, Attention!**

One of the most important branches of Veterinary Science is Veterinary Dentistry, and this department in this country has been neglected owing to the scarcity of Veterinarians. The horse, after he has reached the age of five years, has a complete new set of teeth, and as he grows older and the teeth wear, they cause numerous diseases and disagreeable habits, heretofore ascribed as constitutional trouble which have been traced to the teeth; such as blindness, drooping, stopping short, starting suddenly, frothing, loss of flesh, weak eyes, driving and pulling on one rein.

Rough edges and sharp corners of the teeth lacerate the mouth and produce nervousness and irritability; uneven and elongated molars and incisors prevent the proper mastication of the food, producing indigestion and general debility. Decayed molars cause necrosis of the bone, abscesses, nasal gleet, fistula of the jaw, etc.
